EUROPEAN NEWS

Mitterrand appeal over international farm trade

BY ANDREW GOWERS IN PARIS

THE FRENCH President, M. Francois Mitterrand, yesterday appealed for restraint in international farm trade, which faces severe disruption as a result of the worsening dispute over export subsidies between the U.S. and the European Community.

He told the opening session of the UN World Food Council's annual ministerial meeting here that international agricultural markets should be organised. "In the highly vulnerable sector of foodstuffs I do not believe that unbridled freedom of trade is the best way."

He said the instability accompanying such a free-for-all would be particularly damaging for developing countries. "How can an emerging agriculture in developing countries be expected to compete with older, more efficient, more highly

mechanised farming?" he asked. His remarks were clearly intended to underline French disquiet at the recently announced \$2bn U.S. farm export subsidy programme, and in particular its proposed cut-price offer of 1m tonnes of wheat to Algeria.

France has long insisted that world farm trade should be organised along agreed lines, but it is an idea vehemently opposed by the U.S., which claims that the EEC's unfair export subsidies have allowed it to rob Washington of agricultural markets.

Mitterrand said France would move towards a new round of multi-lateral trade negotiations in the General Agreement on Tariffs and Trade "in due course." It was French reluctance to fix a date for a new round which caused

acrimony at last month's summit of leading industrial nations in Bonn.

Officials of the World Food Council, the UN body responsible for monitoring food policies, share his concern at the prospect of an all-out trade war. Although this is likely to lead to lower world prices for products such as grain, they believe it will tempt African governments to postpone vital agricultural reforms further.

Yesterday's WFC session heard an impassioned and critical speech by the African famine from Mr Eugene Whelan, the Council's Canadian president. He said that if the Council's recommendations on farm policy and long-term aid to Third World agriculture had been adopted, the famine would not have reached nearly its present scale.

Fabius starts visit to E Germany

By Leslie Collitt in Berlin

M. LAURENT Fabius, the French premier, yesterday became the first government leader of the three Western powers responsible for Berlin and Germany to pay an official visit to East Germany.

Paris has set the pace for the three Western Allies in its relations with East Germany. The French foreign minister was the first of the three allies to visit East Berlin, and France's relations with East Germany have been stepped up to coincide with improved ties between East and West Germany.

The French however jealously guard the role as protectors of West Berlin along with Britain and the U.S.

M. Fabius, who was welcomed at Schönefeld airport by Herr Erich Honecker, East Germany's leader, will, however, concentrate more on trade than on politics during his visit to East Berlin.

Although France is East Germany's third largest Western trading partner after West Germany and Austria, Franco-East German trade last year was merely DM 13bn (\$42bn) compared with DM 15.5bn between East and West Germany.

Paris wants to reduce East Germany's considerable trade surplus and M. Fabius is accompanied by Mme Edith Cresson, the French trade minister.

In an interview before the visit, Herr Honecker praised the French Eureka high-technology project, noting that he could foresee co-operation between Eureka and Interkosmos, Comcon's space research organisation.

The East German leader called President Reagan's strategic defence initiative a "danger for all humanity."

He warned that any participation by Bonn in the SDI research programme would have "serious repercussions" for the political climate in Europe.

HOWE TRIES TO SELL PACKAGE TO HIS FELLOW MINISTERS Doubts surround EEC reform

BY QUENTIN PEEL IN BRUSSELS

THE STUNNING scenery of Italy's mountain-ringed Lake Maggiore, and a hot trip to the site of the ill-fated Stresa conference of 1935, when Britain's Ramsay MacDonald, and Pierre Laval of France, sought to restrain the ambitions of Benito Mussolini, failed to help the summit to achieve its aim of reforming plans which could please them all, without committing anyone to the long and laborious process of full-scale Treaty amendment.

They intended more co-ordination of national foreign policies, more majority voting on Community decisions, and speedier removal of all the remaining barriers to a real common market.

The key difference between those who support a full-scale conference for change and those who see no need to amend the Treaty of Rome, centres on whether to preserve the national right of national veto, enshrined in the ill-named Luxembourg compromise. Everyone admits the need to extend the decision-making, but the question is how.

The other difference concerns the future role of the European Parliament, and how far the democratic influence on Community activities.

The British package, as outlined by Sir Geoffrey to his colleagues at Stresa and in a series of bilateral meetings over recent weeks, contains several measures to increase majority voting without abandoning the Luxembourg compromise. They include:

- an instruction by heads of government to use majority voting wherever it is provided for by the Treaty;
- agreement by the EEC leaders to abstain rather than block votes, as the Luxembourg compromise allows;
- insistence that any member state invoking the compromise should justify it in the full

Secretary, is clearly seeking to steel a march on his colleagues by suggesting a package of reform plans which could please them all, without committing anyone to the long and laborious process of full-scale Treaty amendment.

They intended more co-ordination of national foreign policies, more majority voting on Community decisions, and speedier removal of all the remaining barriers to a real common market.

The key difference between those who support a full-scale conference for change and those who see no need to amend the Treaty of Rome, centres on whether to preserve the national right of national veto, enshrined in the ill-named Luxembourg compromise. Everyone admits the need to extend the decision-making, but the question is how.

- an instruction by heads of government to use majority voting wherever it is provided for by the Treaty;
- agreement by the EEC leaders to abstain rather than block votes, as the Luxembourg compromise allows;
- insistence that any member state invoking the compromise should justify it in the full

Foreign Affairs Council, rather than simply allow any departmental minister to bank discussion by pleading a "vital national interest."

● Agreement that where the summit decided on a particular policy goal—such as removal of remaining market barriers—all decisions leading to that goal should be taken by majority voting, not unanimity.

M. Jacques Delors, the European Commission president, believes that any effective change in decision-making practices still needs proper amendment of the Treaty of Rome, by removing the insistence on unanimity in the key Articles 99 (tax harmonisation), 100 (removal of internal market barriers) and 101 (elimination of national laws affecting competition).

The British insist that no member state (and certainly not the British Treasury) will agree to majority voting on Article 99 and the amendment of article 100 would not be necessary if the British package were approved by heads of government. Article 101 already provides for a two-stage process, first of unanimity, followed by majority voting.

Critics of the British position point to an inconsistency between a desire to speed up the process towards a genuine common market (by 1990) whereas the Commission is suggesting 1992, resistance to Commission plans for greater tax harmonisation, and changes in voting procedures lacking the full force of Treaty amendments.

The British ideas on expanding the process of consultation on foreign policies are much

closer to the rest of the member states, though disliked by the Commission.

But the area where the British plans go least far to meet the European Union lobby is on the role of the European Parliament. A commitment to more regular and earlier consultation on important issues (such as participation in Star Wars, perhaps) falls far short of MEPs' wishes to have more legislative authority, and powers over revenues as well as expenditure.

M. Delors reminded the foreign ministers at Stresa that the idea of an inter-governmental conference was "not simply a political fact, but also an emotional fact." But he also admitted that it could easily be counter-productive "if it lasts three to four years, and becomes simply an excuse for doing nothing."

That is the fear the British package is designed to exploit, by offering the alternative of more modest reforms, sooner.

The coming days will see intensive lobbying among the Ten, with the focus particularly on the positions of France and West Germany. President Mitterrand is supposed to make his own position clear on June 13, when he meets Sir Bettina Craxi, the Italian Premier and summit chairman, in Florence.

Herr Helmut Kohl, the West German Chancellor, will be torn by whether his Agriculture Minister uses the Luxembourg compromise this week to block a decrease in cereal prices. If he does, then West Germany backing for a move towards European Union will be undermined.

Food price dispute may end up at summit

BY IVO DAWNAY IN BRUSSELS

FARM MINISTERS of the EEC today resume talks on Community prices for cereal crops, and rapeseed, amid mounting speculation that the issue may have to go to the heads of government summit in Milan at the end of the month for final resolution.

Although most member states

are anxious to avoid such an outcome, hopes of achieving a deal in the face of West German opposition to a price cut are at their lowest ebb.

Sig Filippo Pandolfi, the Italian minister presiding over the Farm Council, has already warned his colleagues that failure to reach agreement this week will mean another meeting in Luxembourg next Monday.

However, little or nothing appears to have changed since the ministers last discussed the issue in May. Furthermore, the conclusion of a package of prices for other farm products has removed a great deal of the urgency behind the talks.

Some now believe that Herr Ignaz Kiechle, the West German

minister, will seek to postpone a decision for as long as possible, forcing his colleagues to agree to roll over last year's prices thus, in effect, establishing a price freeze.

But the political cost of such a move could be expensive to Bonn. In the event, yesterday suggested that several member states may attempt to force the West Germans to a vote, thereby challenging them to invoke fully their right of veto — a right that West Germany publicly eschews in favour of majority voting.

Most observers believe West Germany will invoke the full veto if forced. But one school of thought argues that, as the margin is so small between the 13 per cent price cut proposed

in the final Commission compromise, and the maximum 0.9 per cent cut acceptable to Herr Kiechle, there could be a case for over-riding any claim that this is a vital national interest justifying a veto.

This too, however, looks unlikely to furnish a solution, as any attempt to ignore a veto would be opposed by the UK along with the Danes and Greeks.

The most radical suggestion so far is that the Commission may now unilaterally impose a price cut from the beginning of the new cereal marketing year in August on the grounds that the failure to take a decision leaves it free to regulate the market as it chooses.

Greens set for talks in Hesse

By Rupert Cornwell in Bonn

THE SOCIAL DEMOCRATS (SPD) and Greens in Hesse are set to open negotiations which could lead to the first ever such ruling coalition in a West German state or Land.

This was confirmed yesterday by spokesmen for the radical left-wing Greens after a week-long process of the party in Hesse gave a broad—if highly conditional—endorsement to the offer of Herr Holger Boerner, the state's SPD Premier, for a full-scale alliance.

Should a deal be worked out, it would give Hesse its first clear-cut majority administration since the inconclusive election of October 1983, at which the SPD won a plurality but not an outright majority of seats.

Thereafter, Herr Boerner has had to get by on his own, or with the aid of informal agreements with the Greens. The last of these, which survived five months, collapsed last November after a row about permission for new nuclear facilities in the state.

The new discussions promise to be very tough, however. Instead of the one portfolio, covering an enlarged Environment Ministry, which Herr Boerner has proposed, the Greens are demanding two, as well as a virtual right of veto on nuclear-related plans.

They are refusing furthermore to vote through—as the SPD is insisting—a single state budget covering both 1986 and 1987.

However, Herr Boerner, who has long since proved himself a cunning political tactician, has one particularly strong card in his hand vis-à-vis the Greens. If the talks do fail, and he chooses not to explore the possibility of an alliance with either of the other parties in the assembly, the Christian Democrats or the Liberal Free Democrats (FDP), he could provoke new elections.

After their recent dismal showings in both the Saarland and North Rhine-Westphalia, where they failed to secure the 5 per cent minimum share of the vote required for seats, the Greens will be keen to avoid exposing themselves to a similar setback in Hesse.

Mr Boerner is being investigated on similar charges, but no case has yet been brought to trial. As Mr Boerner was speaking the Police Minister was being held.

Britain and Albania seek ways to improve relations

BY OUR FOREIGN STAFF

BRITAIN IS holding talks in Paris with Albania to try to break the 40-year-old diplomatic impasse between the two countries over claims and counter-claims concerning gold bullion and sunk warships.

The UK Government made the first contact with Tirana before the death in April of Mr Enver Hoxha, who ruled Albania since the Second World War. The Foreign Office said yesterday, "But officials took it as a minimally hopeful sign that Albania had agreed, since Mr Ramiz Alia assumed power there, to continue the talks."

Albania began to emerge from its hermit-like isolation in the last years of the Hoxha regime, and this year has had ministerial exchanges with its Western neighbours, Italy and Greece. The talks with Britain appear to fit into a pattern of general, though gradual, improvement with Western countries, but not with the U.S.

UK officials would not disclose any details of the secret talks with Albania, except to say that the British position was based on proposals of 1980 and 1981. These proposals were that the two countries should establish diplomatic relations and

then discuss how to settle their claims against each other, and not vice versa, as the Albanians have long insisted.

The British claim arises out of a 1946 incident in which two British warships were sunk with loss of life by Albanian mines in the Corfu straits. Three years later the International Court of Justice awarded the UK \$843,947 in damages.

The Albanians, for their part, claim a large portion of the \$85m in gold bullion which the Nazis looted from Albania and other countries during the war. This is now held by Britain, the U.S. and France, which form the Tripartite Gold Commission.

Deposited in the Bank of England and the New York Federal Reserve Bank, this gold bullion amounting to some 5,000 kilograms is being held against, among other things, future Albanian payment of Western compensation claims. Decisions by the Commission on settlement of the gold must be unanimous.

Albania is one of the very few countries with which Britain has not only no diplomatic relations, but also has no indirect representation in UK interests—through a third country embassy.

Solidarity leader speaks out at trial in Gdansk

BY CHRISTOPHER DOBINSKI IN WARSAW

MR LECH WALESA, the leader of Solidarity, yesterday told a court in Gdansk that three prominent Solidarity activists had been sentenced to prison for their part in the "defendants' bench."

The three, Mr Ladyslaw Fajnsztuk, Mr Bogdan Lis and Mr Adam Michnik, are being tried for fomenting unrest by playing a leading role in the banned union and attending a meeting in mid-March to plan a 15-minute token strike against food price rises. They face up to 7½ years in prison if convicted.

Mr Walesa denied in court that he had called the meeting to discuss strikes plans and in any case stated that nothing substantive had been debated before the police entered the flat where it was being held.

Mr Walesa is being investigated on similar charges, but no case has yet been brought to trial. As Mr Walesa was speaking the Police Minister was being held.

Mr Walesa is being investigated on similar charges, but no case has yet been brought to trial. As Mr Walesa was speaking the Police Minister was being held.

Shintaro Abe, the Japanese Foreign Minister, who arrived yesterday for a two day visit here.

The Japanese visit marks the latest stage in Poland's chequered attempts to re-establish normal links with Western countries, which suffered a setback when Mr Leszek Tadeusz, the Polish Premier, postponed a visit here last month.

The Poles have been insisting that the Western leaders drop contacts with Solidarity supporters while in Poland, and this spurred the Belgian visit and is holding up preparations for trips to Warsaw by a Spanish delegation as well as the Irish Foreign Minister.

The Poles are hoping for some Japanese support in their quest for fresh Western government credits.

Western governments are waiting for Poland to sign an agreement rescheduling \$12bn falling due between 1983 and 1984 before considering the issue.

Swiss Bank Corporation: Three times a day, we bring an issue to market.

"There are a number of reasons why so many borrowers ask us to market their new issues. First of all, professional design increases the ultimate success of the issue. Then there's our acknowledged placing power, and finally, our group's distribution capabilities are recognized as among the best, worldwide."

Dr. Christian F. Pühr, Senior Vice President

And it's not surprising, either. Swiss Bank Corporation started business as a securities issuing bank, so we have a long historical perspective on how the modern markets evolved and how they work. Over the last hundred years and more, we have acquired a good deal of expertise in providing financial assistance to many different borrowers from all over the world and in all major international capital markets. If you are thinking about your next funding operation, talk to us. We will help determine what instruments best meet your financial requirements. Through one of our operative units in Basle, London or New York, we can help.

David Housego reports from Paris on a political programme which promises a major upheaval

Opposition lifts veil on radical new view of French society

Abstentions reach 6% in Hungary elections

By Leslie Collett in Berlin

HUNGARY'S first obligatory multiple-candidate elections at the weekend resulted in no upsets - all candidates were approved by the Communist Party - but did contain a few surprises.

In an attempt to introduce some choice for voters, at least two candidates had to contest each of the 352 parliamentary seats and the 42,000 seats on local councils. But 6.1 per cent of eligible voters abstained from the ballots, compared with 3 per cent in 1980 elections, as voting in Hungary is not mandatory. Only 1.2 per cent of the 7.4m voters opposed the candidates for parliament, while 5.4 per cent of the votes were declared invalid.

Mr Imre Pozsgy, general secretary of the People's Patriotic Front, which represents the Communist Party, said there were "no political reasons" for the larger number of abstentions and invalid votes.

Hungary's Communist leader, Mr János Kádár, who was placed on an unopposed national list along with 34 other prominent candidates, was re-elected with a 98.02 per cent vote. The Foreign Minister, Mr Péter Varkonyi, who was opposed by two candidates, received only 62.1 per cent of the votes. Mr Varkonyi had to compete for a place on the ballot in his Budapest district against the dissident philosopher Mr György Márkus, who was defeated in nominating meetings.

Mr István Szabó, the speaker of the Hungarian legislature, said he expected a parliament that would be "more prepared to debate." The Hungarian parliament meets only four times a year for a few days and routinely approves government legislation.

Although the Government and party gave the multiple-candidate elections a great deal of publicity, it was made clear that the limited choice would not be widened in the future.

Mr János Berecz, a Communist Party secretary, said political life in Hungary would not be carried on in the form of "election theatrics."

THE FRENCH opposition parties lifted the veil for the first time over the weekend on what they would do if elected to power next March. Taken at face value, their programme would amount to as radical an upheaval of French society as the country has seen this century.

Four years out of power have produced as dramatic a shift of policy on the French right as the Socialists have undergone in office. The starting point is what M. Alain Juppé, the economic spokesman of the neo-Gaullist RPR, calls a "collective confession of guilt." It is that while the Right were in power in the 1970s, they wrongly increased the power of the state so that taxes grew and the government intervened more in the economy.

The "liberal" model they are now proposing reflects a totally different view of the way in which France should develop. It would be a country which gave first priority to business and profitability—and in which business was more lightly taxed and less controlled. The public sector would be cut to a minimum through a massive programme of privatisation. Universities would substantially finance themselves and compete against each other. The monopoly of "technocrats" in the civil service would be broken by drafting in outsiders.

Price and exchange controls would disappear as part of the policy of less intervention. The Bank of France would be given an independence comparable to the West German Bundesbank, with control of monetary policy and supervision of the banking system.

These "supply-side measures" designed to inject fresh dynamism into the economy, would be backed by a macro-economic policy which put the emphasis on cutting public expenditure and reducing taxes. The opposition's goal is a FFr 40bn (\$3.3bn) annual cut in public expenditure—a yearly reduction equivalent to one percentage point of GNP. It also hopes to boost economic growth to 3 per cent a year.

The broad objectives of the programme echo the generally rightward drift of the consensus in France over the past four years — a trend that has occupied in most industrialised countries. But it is far more radical than anything Mrs Margaret Thatcher proposed in Britain or President Ronald Reagan in the U.S. because, as former President Valéry Giscard d'Estaing, said over the weekend: "A liberal economy has never really existed in France."

France's last major experiment with market oriented economics was the capitalist

Opposition leaders Jacques Chirac, Raymond Barre and Valéry Giscard d'Estaing: their programme's broad objectives follow the rightward drift of the French consensus

explosion of the second half of the 19th century. This brought an unprecedented boom but left such inequalities that France has been on the retreat from it ever since.

M. Raymond Barre, the former Prime Minister, and the cautious voice within the opposition,

believes that it is foolish for the Right to proclaim from the rooftops policies that are unrealistic or will be painful to implement.

There is little obvious leeway for further cutting public expenditure and taxes—the Socialists are having enormous

difficulty this year in meeting their objectives of tax cuts and of holding the budget deficit to 3 per cent of GNP.

On that basis the opposition would have great difficulty in reducing expenditure by a further FFr 40bn a year—without substantially raising public

sector tariffs, health charges etc, which would have a deflationary impact on the economy.

They could be taking power at a time when recovery in the trade deficit was still fragile and when the franc was under pressure.

In addition to the problems of macroeconomic policy, the opposition faces the difficulty that its major structural reforms will take a long time to show results, and will inevitably have unpopular consequences in the short term. Hanging over them is the possibility that President François Mitterrand could use the most powerful constitutional weapon in his armoury—the right to dissolve the National Assembly after a year or just at the moment when the Government's problems are undermining its popularity.

M. Jacques Chirac, the RPR leader and M. Giscard d'Estaing are both aware of these objections. Two calculations have led them to throw caution to the winds.

The first is that they believe that the opposition can no longer satisfy its followers by criticising the Government alone.

The second reason lies in the differing views they have from M. Barre on how events will unfold on the morrow of a right-wing victory in March.

M. Barre believes that it will be impossible for the Right to implement their programme if M. Mitterrand remains in the office. He is thus calling for a massive opposition victory that will force M. Mitterrand to quit.

M. Chirac believes the opposition risks little in pitching its ambitions high. If M. Mitterrand refuses his assent or turns down nominations for key posts, then the responsibility for the ensuing constitutional crisis would rest squarely on his shoulders. In such circumstances the opposition (and M. Chirac in particular) would stand the best chance of winning the presidential election that would follow shortly after.

M. Giscard d'Estaing's strategy is based on this scenario—that M. Mitterrand will remain in office but initially as a passive spectator. In such circumstances, the former President would take the lead in explaining that much of the opposition's programme would have to be shelved until after the presidential elections of 1988.

The opposition is thus in a state of schizophrenia. It is broadly agreed on the direction in which it would like to push French society and the French economy. But it is violently at odds over the timing, methods and who should lead it.

Kyprianou accepts latest UN proposals

BY ANDRIANA IERODIAKONOU IN ATHENS

CYPRIOUS President Spyros Kyprianou arrived in Athens yesterday to brief the Greek Government on the latest United Nations (UN) peace proposals for the reunification of Cyprus. According to officials following the UN peace initiative, the proposals have been accepted unconditionally by the Greek Cypriot side but not yet by the Turkish Cypriots.

This is the first opportunity the Cypriot President has had to make the journey to Athens to discuss the matter face to face with Dr Andreas Papandreu, Greek Prime Minister, given that Greece has been in the throes of a general election campaign since the end of April, roughly the time when the new proposals were put forward by Sr Javier Peres de Cuellar, secretary general.

Mr Kyprianou will meet both Dr Papandreu and Greek President

Christos Sartzetakis today. Further consultations may be held tomorrow before the Cypriot president's scheduled departure on Thursday morning.

Sr de Cuellar's latest proposals are essentially a blend of documentation put on the table by the UN secretariat and the Greek and Turkish Cypriots during an abortive January meeting in New York between Mr Kyprianou and Mr Rauf Denktaş, the Turkish Cypriot leader. Like the January documentation, the "consolidated paper" as it is called, envisages the setting up of an independent, two zone federal republic in Cyprus with a Greek-Cypriot President and Turkish-Cypriot vice-president, and a single citizenship and currency.

The new element is to be found in Sr de Cuellar's suggestions on the

procedures to be followed for the translation of his peace proposals into a signed and sealed settlement plan for Cyprus. The secretary general has abandoned the idea of trying to plunge directly into a second Kyprianou-Denktaş meeting, which was his original aim after the collapse of the January talks. This would risk a repeat failure at summit level, which would in turn endanger the UN peace initiative.

Instead Sr de Cuellar has called on the Greek and Turkish Cypriots in the first instance to endorse the present "consolidated paper". Once the paper has been accepted then the secretary general's suggestion is that working groups should immediately take up the task of tackling unresolved details. These include key issues such as the timetable for the withdrawal of Turkish

occupation troops, which have held the northern third of Cyprus since 1974, and guarantees for the future state. A new summit meeting would follow.

According to Western diplomats in Nicosia, Mr Denktaş is unlikely to give his reply on the secretary general's proposals before elections scheduled for June 23 to be held in northern Cyprus, which was unilaterally declared a state by the Turkish Cypriots in 1983.

On Sunday, the Turkish Cypriots staged "presidential" elections in the self-styled state in which Mr Denktaş emerged as the winner with over 70 per cent of the vote. A referendum for a "constitution" was held in early May. Both the Greek and Cypriot governments issued strong condemnations of the Turkish Cypriot moves yesterday.

ALL OF THE LUXURY, NONE OF THE TAX.

Wherever you plan to be in the world (so long as it's not in Britain), there's only one place to buy a tax free BMW. And that's Park Lane Export. We are the sole exporters of BMWs in Britain.

And for that reason alone, you can

rely on us to deliver a BMW that meets your (and your country's) requirements, anywhere in the world. Who in the world could resist such tax free luxury as this?

PHILIPS

EUROPEAN NEWS

Peter Montagnon, Euromarkets Correspondent, writes from Basle on the annual report of the Bank for International Settlements

BIS prescribes gentle nurturing of the economic recovery process

ECONOMIC policy-makers have much reason for satisfaction when they look back at the events of 1984, according to the annual report of the Bank for International Settlements (BIS) published today.

Not only did total economic output in the Group of Ten industrial countries grow by an average of nearly 5 per cent, making last year one of the best since 1973, inflation also remained generally under control.

The recovery process, spurred by the rapid growth of the U.S. economy, has spread not only to all industrial countries but also to large parts of the developing world. Millions of new jobs have been created within the U.S. itself, while the recovery has at least halted the deterioration of European labour markets. The resumption of growth has helped defuse the debt crisis and banks in industrial countries have been able to strengthen their capital base.

Perhaps because the recent record has been so positive, this year's report is remarkable for its lack of stridency. Gone are last year's dire warnings of a collapse in world growth if the U.S. fails to take action to correct its budget deficit.

In their place is a more gentle insistence on the need for action to be taken over the medium term to preserve and nurture the recovery process. "The major policy objective for Western industrial countries is clear enough: to keep up the momentum of their recovery," the report states.

Against the present broadly encouraging background—"one that would have been considered highly improbable by even the most sanguine forecasters during the crisis months of 1982"—four potentially serious problem areas remain. These are: the twin problems of unemployment and inflation; the risks of instability inherent in a climate of financial market innovation; the volatility of exchange rates and external imbalances in the developed world; and the international debt situation.

The report goes on to argue that the record of progress in 1984 masks two continuing fundamental questions for policy makers. The first is that almost five years of anti-inflation policies in most Western countries have still failed to eradicate inflation. The second is that the recovery has progressed far without having done more than halt the rise in unemployment in Europe and

Rapid market changes add to problems of monetary policymaking

THE RAPID pace of innovation and deregulation in financial markets has added immeasurably to the problems facing central banks in formulating monetary policy, the Bank for International Settlements (BIS) says in its annual report.

The practice of setting targets for money supply expansion, which has grown up in many industrial countries since the early 1970s, has been complicated by the blurring of distinctions between types of financial instrument and of institutions operating in the marketplace.

"This does not make targeting easier, in terms of

either definition or attainment," the BIS says, although it stresses that central banks must continue to pursue domestic monetary policies aimed at a further slowdown of inflation.

In practice, this will mean operating targets in a somewhat longer perspective, accompanied by discretionary changes in the target whenever these are necessitated by the shifting institutional or economic environment.

Such an approach is a difficult one, however, because discretionary changes in monetary targets tend to undermine one of their most important roles—that of providing a clearly defined

"anchor" for the wildly-fluctuating expectations of market participants.

"In these circumstances the credibility of monetary action comes increasingly to depend upon the final results achieved, which puts a very heavy burden indeed on monetary policy," the report says.

But central banks will also have to adapt to the changing financial climate in other ways too, it continues. There is a danger that the pace of change could add to the instability of financial markets.

The complex process of innovation, despecialisation and deregulation must be

kept firmly under control so as to ensure that it proceeds in an orderly and balanced way without exposing whole categories of financial intermediary to disruptive pressure.

The flow of information about the markets must be improved and the supervisory framework adapted in an internationally co-ordinated way to present highly-innovative and competitive environment, it says.

On another issue of monetary policy, the report comes out in favour of using exchange market intervention to give some support to medium-term stabilisation policies.

immediate, drastic cut in the deficit is obviously not feasible. Nor is it desirable, since it could well push the U.S. economy towards a premature slowdown. Gradual adjustment of the deficit would imply a moderate slowdown in U.S. growth, a significant further decline in U.S. interest rates and in the value of the dollar, and a boost in U.S. exports.

Other countries would have to take offsetting measures both to compensate for slower U.S. growth and to make room for an expansion of U.S. exports. On the latter issue, the report is blunt and categorical. Protectionism must be rolled back, it says. Japan has a major role to play in boosting its imports.

The report also largely endorses the Bonn summit reluctance of major countries such as Japan, West Germany and the UK to reflate their economies through American-style tax cuts.

"The current U.S. experience is simply not exportable; no government outside the U.S. could safely base a stimulatory fiscal policy on the assumption that it will attract spontaneous external financing on a durable basis," it says.

These countries, too, must

take a medium-term approach to improving their growth prospects. The best contribution Europe could make would be to speed up and even radicalise efforts towards removing structural rigidities. In the process, the weight of public sector spending must be further reduced, but the tax burden should be alleviated pari passu with progress in this direction, not long in advance of it.

Here the report harks again on the rigidity of wage structures. In singles and Japan is probably the only industrialised country to have successfully tackled both inflation and unemployment. One approach elsewhere could be remuneration arrangements depending in part at least on the profitability of the individual firm, somewhat along the lines of bonus and overtime provisions applying in Japan.

"Only such a major departure from current practice could make it possible for labour to be priced into the market and for unemployment to be gradually swept away. The relatively goods news on the inflation front should not distract attention from the great need for far-reaching changes in the way prices and wages are set," it concludes.

KWU signs preliminary accord for N-plants in China

BY PETER BRUCE IN BONN

KRAFTWERK UNION, the West German nuclear plant contractor, has finally signed a memorandum of understanding with the Chinese Government over the possible delivery of four 1,000 MW pressurised water reactors to Peking.

Negotiations towards such a deal, which would be worth up to DM 5bn (£1.28bn), have dragged on since 1979 and culminated here yesterday during an official visit to West Germany by the Chinese Prime Minister, Zhao Ziyang.

KWU said after the signing of the deal would lead to a broad transfer of technology, enabling China to build further

plants on its own. The two signatories still have lengthy negotiations on delivery, price and financing ahead of them, however, and it is still possible that strong competitors in the U.S. and in France could win at least part of the contracts the Chinese are preparing to offer.

"The negotiations... will probably take a while longer, with the German reactor industry facing fiercer international competition," KWU said in a statement.

The first two reactors are due to be built at Sunan, 80 miles west of Shanghai. China is expected to build up to 10

nuclear reactors by the end of the century as part of a massive modernisation programme. The Bonn Government may also have to reach a final decision on its opposition to sending nuclear waste to China for storage before final contracts are signed. China has offered Bonn nuclear waste storage facilities in the Gobi Desert as a means of financing West German exports. Bonn was initially opposed to the idea, partly because China has not signed the Non-proliferation Treaty, but the idea has won more support here recently.

If the West Germans do win final contracts, it also seems

likely that some work on the reactors will be subcontracted to Nuclebras, the Brazilian state nuclear authority.

The Brazilians are in urgent need of new orders, and Peking and Brasilia signed an agreement last year which would allow for co-operation between the two on reactor design and construction.

Bonn and Peking have also signed a double taxation pact during Prime Minister Zhao's stay, with the West Germans also expressing interest in becoming involved in small and medium sized businesses in China.

It has also become apparent

that Bonn has been intervening on Peking's behalf with CoCom, the U.S.-led agency which monitors exports of high technology to Communist countries. Zhao yesterday thanked Chancellor Helmut Kohl for his support with re to CoCom, which often blocks delivery of sophisticated computer equipment to the Communist world.

Two thousand farmers took part (right) in a protest in 1979 against the Bonn Government's nuclear waste plans for Gorleben in Lower Saxony

Legal battles strikes core of W. German nuclear waste plan

BY JOHN DAVIES IN FRANKFURT

WEST GERMANY'S nuclear power industry faces a new bout of legal wrangling, after court orders have brought a halt to its plans for intermediate storage depots for nuclear waste.

The court rulings strike at one of the basic pillars of the country's strategy for dealing with the growing volume of spent fuel being unloaded from its nuclear power stations. However, the rulings amount to a temporary "freeze" until more detailed court hearings can be held, and nuclear experts hope that they can win future legal arguments.

The industry's latest setback came last week when a court in Münster issued a temporary injunction to stop work on construction of an intermediate storage depot for spent fuel at Ahaus in North Rhine-Westphalia, near the Dutch border.

In a separate case earlier this year, a court in Lüneburg ordered a halt to deliveries of spent nuclear fuel to the newly-finished intermediate storage depot at Gorleben in Lower Saxony, close to the East German border.

Until now, most spent nuclear fuel from West Germany's power stations has been sent to France or the UK for reprocessing for future use, and electricity utilities have contracts for future shipments there into the 1990s.

The West Germans, however, plan to build their own reprocessing plant at Wackersdorf in Bavaria at a cost of DM 5.2bn (£1.32bn). It is due to start in the early to mid-1990s. Before spent fuel is treated at Wackersdorf, it is supposed to be stored for some years, in the Gorleben and Ahaus intermediate depots.

The Gorleben depot, involving total investment of DM 80m, took its first deliveries of spent fuel late last year, while Ahaus, where construction alone is put at about DM 24m, is due to be finished in mid-1986.

The court rulings are a victory, so far at least, for West Germany's still-active anti-nuclear movement, which for two decades has fought the development of nuclear power with violent demonstrations and resourceful legal manoeuvring.

The rulings have raised some speculation about whether West German law at present permits intermediate depots for storing spent nuclear fuel; but the courts have not yet dealt in detail with such substantive issues.

At Ahaus the building project has been halted to consider objections raised by a local farmer; he argues that the depot is being built on land which is supposed to be used for industrial purposes, and that a nuclear storage depot is not an ordinary industrial project.

Nuclear authorities claim that they have no cause for pessimism: they hope that the issues will be clearer within a few months. On the other hand, it is impossible to predict how such court cases will develop or how long they will take, especially if appeals to higher courts are involved.

Nuclear experts say they still have plenty of room for manoeuvre in their long-term nuclear waste plans, and that time is still on their side. They argue that no nuclear power station will be impeded if spent fuel cannot be sent to Gorleben in the immediate future. In addition to facilities abroad, some nuclear plant themselves have sizeable storage capacity in so-called compact racks.

Fuel destined for the Wackersdorf reprocessing plant has to be stored for six or seven years beforehand. This means that storage capacity does not become a real problem until about 1988-89, assuming that the reprocessing plant is in full operation before 1995.

However, one nuclear scientist said the court rulings showed that the "back end" of the nuclear fuel cycle (involving spent fuel) was very difficult to handle in West Germany. "It is a psychological problem," he said.

The court cases are likely to be used by the French, and also the Chinese, to reinforce their arguments in seeking nuclear fuel business in West Germany.

The French have already been pressing the West German electricity undertakings to agree to further arrangements to fill up spare capacity at the reprocessing plant at La Hague, near Cherbourg.

The West German Government initially rejected the idea of sending nuclear waste to China when the matter first came up more than a year ago; but despite a cautious approach, the idea has gained some acceptance among nuclear experts.

Interest in the idea has grown since it became clear that Kraftwerk Union (KWU) was well in the running to win nuclear power station business in China.

The West Germans, however, remain guarded about the nuclear waste idea, partly because of the political problem of China's nuclear weapons programme and partly because the Chinese are asking a high price for their services.

Despite the efforts of nuclear protestors, West Germany now has 16 nuclear power plants in addition to three experimental plants. They contributed 27.6 per cent of the electricity generated last year in the public network (omitting some conventional power stations for private industry's own use).

BI-INVEST

Finanziaria di Investimenti S.p.A.
Milano, Via Turati 25 - Roma, L. del Nazareno 8
Share Capital: Lit. 79.433.170.000

Lit. 170 per saving share
Investments Lit. 607 billion
Net Worth: Lit. 325 billion

1984 Consolidated Balance Sheet:

Net Profit Lit. 30.2 billion
Net Worth: Lit. 391.3 billion

Main Business Sectors:

REAL ESTATE
A new name for an old tradition dating back to 1918.

In this sector, BI-INVEST direct investments amount to Lit. 139 billion for a total value of 410,000 cubic metres and 2,500,000 square metres of building land.

The activity in the real estate sector is performed through subsidiary companies, the most important of which is Investimenti Immobiliari Italiani S.p.A. (share capital: Lit. 180 billion, net worth: Lit. 258 billion) rented buildings 150,000 square metres).

INSURANCE
With a direct 25% equity investment, BI-INVEST is the major shareholder of La Fondia-

ria S.p.A., a leading Italian insurance group. La Fondia Group controls among others the following insurance companies: Milano Assicurazioni, Italia Assicurazioni, La Previdente, Card, Geas, La Tena, The Dominion Insurance and Mill. R., with a total premium value exceeding Lit. 1,650 billion in fiscal 1984.

FINANCE
In this sector, BI-INVEST operates mainly through two subsidiaries Finanziaria Milanese S.p.A. (share capital Lit. 2.5 billion; net worth: Lit. 6.1 billion) and Invest International Holdings (share capital: US \$ 70.2 million, net worth US \$ 75.4). BI-INVEST also holds a 14.74% shareholding in Gemina S.p.A. (share capital: Lit. 352 billion, net worth: Lit. 366 billion).

INDUSTRY

Besides equity investments in companies such as Fisac and Star with well established traditions and international experience, BI-INVEST is also active in the industrial sector through Saffa S.p.A. (in 1984 sales: Lit. 202.5 billion, profit: Lit. 9.8 billion; net worth: Lit. 92.2 billion). Saffa is a leading European manufacturer of coated cardboard (360,000 tons/year), and also operates in the fields of chemistry, agriculture and advanced composite materials for both civil and military applications.

RETAILING
S.I.P.A. - Società Italiana Postalmarket Azionaria S.p.A. is the major and the oldest Italian mail-order Company (sales: Lit. 285 billion, profit: Lit. 5 billion, 6 million catalogues distributed).

OVERSEAS NEWS

Finns deny improper behaviour by troops in Lebanon

BY NORA BOUSTANY IN BEIRUT

FINLAND denied yesterday that its troops serving with UN forces in south Lebanon had in any way behaved improperly. In a response to Israeli accusations, a statement issued in Helsinki said that such charges were groundless.

The Israeli-backed South Lebanon Army is holding 21 Finnish troops hostage and demanding the release of 11 of its own men seized by the Shi'ite Amal militia.

The Finnish statement said that during May "it can be shown that the Finns in line with their duty disarmed roughly as many SLA as Amal organisation soldiers."

Mr. Timor Goksel, the UN spokesman in Lebanon, said yesterday that all contact had been lost with the Finnish hostages.

Other officials predicted that the crisis might continue for some time.

The Finns in south Lebanon claimed that the 11 men belonging to the SLA had voluntarily handed in their weapons and asked to be taken to Amal headquarters. Ali Jaber, the leader of the 11, was quoted as saying that none wished to return to the SLA.

It was meanwhile confirmed in Beirut that an American professor was abducted on Sunday while travelling by car from the airport. Mr. Thomas Sutherland was the seventh American to be kidnapped in the Moslem-controlled western half of the capital since March 1984.

No one has yet claimed responsibility for the seizure of Mr. Sutherland who is dean of the agriculture faculty at the American University of Beirut.

Two Katyusha rockets were fired into northern Israel yesterday following claims by senior officers that all regular army units had completed their withdrawal from south Lebanon. No one was hurt in the attack but local residents said they were the first rockets to hit the area since the June 1982 invasion.

Israel launched its invasion in order to protect the north of its country from such attacks and with the aid of the SLA has set up a seven to 12-mile deep security belt in southern Lebanon. A number of Israeli troops and intelligence officers were sent to police the zone in an attempt to prevent guerrilla infiltration.

Owen urges Japan to set up bank for African aid

BY JUREK MARTIN IN TOKYO

DR DAVID OWEN, leader of the British Social Democratic Party, yesterday proposed that Japan establish and finance a rural credit bank for Africa as a "distinctive contribution" to help tackle the problems of the continent.

Invoking the Grameen (rural) Bank in Bangladesh as a possible model, he suggested that it might be set up for 10 years with a possible initial financial commitment of £12bn (\$48bn), rising to as much as £40bn. Funding, he said, should be largely in yen, and Japan should not consider the venture to be profit-oriented.

Dr Owen's proposals were released in his absence to a symposium here on the "Ethics of Human Survival", sponsored in part by the Geneva-based Independent Commission on International Humanitarian Issues, of which he is a member.

He had flown back to the UK the night before for the funeral of Lord George-Brown.

Over the weekend, the Japanese Government announced, with some satisfaction, figures that claimed that Japan had last year become the second largest aid donor in money terms among the Western industrial nations. A breakdown of the statistics into discretionary aid and trade-related credits, a source of controversy with the

UK, was not, however, made available.

Dr Owen, who had argued in a recent report of the Trilateral Commission, another international study group on which he serves, that Japan should save less and spend more, does not accept this Japanese contention. He said in his paper yesterday that, if aid and defence spending were combined and factored as a proportion of gross national product, Japan would rank at the bottom of any Western league.

Moreover, 70 per cent of Japanese aid was directed to Asia, he said. While understandable and while not asking Japan to reduce its Asian assistance, "this skewing of aid must be balanced against famine, poverty and real need," especially in Africa.

The deprivations afflicting Africa have attracted considerable attention in Japan. The Foreign Ministry has conducted a successful domestic consciousness-raising campaign, which has been dutifully picked up by the Japanese media.

Dr Owen said an agricultural credit bank for Africa was consistent with Japan's experience of assisting its farmers. He hoped, among other things, that it might result in young Japanese going to work in Africa.

Arab bank's loans rise

THE Arab Bank for Economic Development in Africa (Badea) approved loans worth \$88m (£69.2m) last year, the highest annual level since the institution's inception a decade ago, according to the bank's 1984 report, writes Michael Holman.

Total lending over the decade was \$669m, and when loans for the Special Arab

Aid Fund for Africa are included (\$214m) the Bank's commitments total \$883m.

Last year saw sub-Saharan Africa take "a turn for the worse in a truly alarming way," says the report. "In most of the countries of the region, GNP declined sharply, in some cases by up to 10 per cent, in the wake of the worst drought for a century."

Tunisian President in trip to U.S. and France

BY FRANCIS GHILES

THE VISIT this week by President Habib Bourguiba of Tunisia to France and the U.S., the two Western nations with the closest ties to his country, is essentially a courtesy trip but must be seen against the background of the increasingly volatile political situation in North Africa.

However frail he may be, the 84-year-old doyen of North African leaders still dominates his country's politics after making a remarkable recovery from the stroke he suffered last November.

The trip follows the alliance formed recently between Morocco and Libya and the change of regime in Sudan. Colonel Muammar Gaddafi, the Libyan leader, is never shy of trying to intervene in Tunisian politics. Libya recently beamed anti-semitic broadcasts across the region, calling on countries

to "kill their Jews." President Bourguiba intervened to stop the broadcasts.

Relations between Tunisia and France remain very close both politically and economically while Paris and Washington have a strong vested interest in the continuing stability of this small north African country. Their concern about what may happen after the ageing president is no longer in power was heightened last year by the worst riots since independence, which followed the decision to double the price of bread.

The U.S. multiplied its military aid sixfold between 1980 and 1983 and has maintained it around \$90m (£71m) per annum since then.

Since independence, the U.S. has granted about \$1bn worth of aid to Tunisia and further aid requests are bound to be discussed in Washington.

Sudan poll 'next April'

SUDAN's military leader General Abdul-Rahman M. al-Swaraddahab has been quoted as saying that general elections will be held next April in his country. AFP-DJ reports from Saudi Arabia.

In an interview published in the English-language newspaper Saudi Gazette, Gen. Swaraddahab said elections have been scheduled for April 26 to choose a constituent assembly, which would formulate a constitution.

"The elections will take place in time," he said. "All arrangements have been made. There should be no delays, and the legislative assembly will write the constitution and form the Parliament."

Gen. Swaraddahab was on a two-day unofficial visit to Saudi Arabia, ostensibly to perform the Umrah, the lesser pilgrimage to Mecca. He also was to hold informal talks with King Fadd.

Saudi Arabian imports fall 12.3%

SAUDI ARABIA'S imports fell 12.3 per cent last year to \$11.7bn (£25.5bn) according to a Ministry of Finance statement reported by Reuters in Riyadh.

The Ministry, which made no mention of exports, attributed the decline to lower prices, a fall in freight costs and increased stocks. Car imports were 32.7 per cent lower and electrical equipment and appliances were down 18.7 per cent.

Zambian strike ends

Zambia's week-long copper mining strike has ended and government officials have begun bearing appeals from more than 4,000 sacked workers, a Zambian Consolidated Copper Mines spokesman told AP in Lusaka.

Metalworkers' plea

The International Metalworkers' Federation opened its world congress yesterday with a call for a campaign to reduce working hours, reports AP from Tokyo.

Mr. Herman Rebban, general secretary, singled out Brazil, South Korea and Japan and said "the campaign for reduced working time remains a priority for the rest of this century." The congress is held every four years.

Our Harare Correspondent looks at the contenders in the coming Zimbabwe elections

Hiccups for Mugabe on road to poll victory

ON THE face of it, Zimbabwe's ruling Zanu Party should win a comfortable majority when the country's 2.9m black voters go to the polls on July 1 and 2.

It draws support from the dominant Shona tribe—80 per cent of the population—has enjoyed the uncritical backing of the state-controlled media since independence in 1980, and the economy is recovering from the country's worst drought for decades.

But Mr Robert Mugabe, the Prime Minister, is nonetheless taking no chances in a campaign which effectively began several months ago. His party shelved the contentious proposals for a one-party state, has cut back on the Marxist-Leninist rhetoric, and last week provided the electorate with a 285m sweetener: minimum wage levels went up 15 per cent, as did the pay of the country's 150,000 civil servants.

Zanu, however, has to cope with two challenges. (The one all-powerful white community are very much on the sidelines, voting on June 27 for their 20 reserved seats.) The first, and possibly less serious of the two, is posed by the leading opposition party, Zapu, led by Mr Joshua Nkomo, which held 19 of the 80 black seats in the last parliament. The Government's brutal military campaign against armed "dissidents" in the Zapu stronghold of Matabeleland, which left thousands of civilians killed or wounded,

Poll opponents: Mugabe and Nkomo.

has, if anything reinforced Mr Nkomo's support in the province.

The second challenge is the growing dissatisfaction among the urban population of Zimbabwe, whose high expectations of post-independence benefits have not always been met.

The rural areas of the country, apart from Matabeleland, are firmly in the hands of Zanu. They have been assured, not only by dramatic advances in health, education and

agricultural services, but through a process of often harsh politicalisation that brooks no dissent.

In the urban areas, however, it is a different picture. The waiting lists for housing are as long as they were under white rule, the bus system is increasingly inadequate, school fees have risen sharply and unemployment has grown. Unskilled workers have found that inflation has eroded pay increases, and they spend the same pro-

portion of their wages on the barest essentials.

Whether the two main opposition parties—Zapu and the United African National Council of Bishop Abel Muzorewa, the former Prime Minister whose party won three seats in 1980—can take advantage of urban complaints is another matter.

Zanu's township network of youth members see to it that the opposition parties have no house meetings. But the test will come in the polling booth, where for the first time voters will be selecting candidates matched to the 80 constituencies, rather than endorsing a party list for the whole province as was the case in 1980.

So local issues, the popularity of candidates, their tribal affiliations and their past performances will come into play, giving opposition parties a far stronger hand than before.

None of the political parties have as yet published their manifestoes, but the basic issues seem clear. Zanu has adopted a pragmatic stance, pulling back from a demand for a one-party state which has alarmed many voters long used to a diversity of political choice. It has also pulled back from its determination to create a Marxist-Leninist state, although remaining firmly committed to socialism.

Both Zapu and the UANC, for their part, are likely to promote

a mixed economy, a multi-party democracy, and attack the Government's handling of the economy and human rights over the past five-and-a-half years.

For almost the first time since independence, they are getting full access to the media: ranging from the right to unhindered access to advertising space and coverage of opposition party statements to a promise of interviews on television.

The parties have little time, however, to take advantage of this concession to free and fair elections, for the pre-election timetable was shortened by the Government from five weeks to 19 days.

But there is little doubt that the Government is allowing greater debate about political and economic issues than at any time since independence, as well as reigning in some of its intimidatory youth brigades.

In March this year, Mr Mike Auret, chairman of the Catholic Justice and Peace Commission, which has sharply criticised government methods in Matabeleland, said that intimidation had made fair elections impossible. Since then, he believes, the Government has made a "real effort."

"The impression I get is that the Government really wants to see free and fair elections, and is trying very hard to ensure that the world will see it like that."

WOULDN'T YOU LIKE TO MAKE
1,600,000 NEW BUSINESS CONTACTS
IN THE NEXT 24 HOURS?

WORLD-WIDE LOW-COST TELEX DIRECT FROM YOUR DESK

Every business regardless of size, wants and needs a fast, efficient, communications system.

It's vital it could also cost a small fortune. Now Cable and Wireless and America's Western Union give you access to world-wide telex at a fraction of the cost.

How? EasyLink, telex for the future. EasyLink cuts out all the expensive specialised equipment and lines associated with joining the traditional telex network, simply and effectively transforming your existing microcomputer, word processor, or electronic terminal into a two-way link with any telex terminal nationally or internationally.

It also gives you direct access to the fast-growing network of other EasyLink subscribers.

Wouldn't you like to transmit information instantly, in writing and in complete confidence?

With EasyLink, information can be sent direct to or from your desk, or with a portable terminal you can EasyLink from your home, a client's office or even a hotel room. In fact anywhere there's a telephone.

EasyLink keeps you in touch with your business contacts, customers and suppliers 24 hours a day, seven days a week.

If you already have a telex, EasyLink can still be invaluable, because our service is always available and allows you to send telexes up to 24 times faster. Your office need not be kept open or staff kept working all hours, just to clear late messages.

You need never miss a message. Because if you're busy sending, any incoming messages will be held in a "mailbox" by our central computer. You can check your mailbox whenever you like simply by keying in your personal code (this ensures you alone have access). You can either retrieve all your messages or just the urgent ones, whichever suits you best.

How much does it cost? Because EasyLink uses your existing equipment the initial costs are minimal. The only additional equipment you may need is a modem or acoustic coupler. These are

small inexpensive devices that allow computers to talk down telephone lines. You may want to make the most of your micro and our service with our special EasyLink software package.

Joining the service and receiving your first EasyLink number costs just £40 with additional numbers for other people in your company at £10 each. The monthly subscription is £12.95 (less for multiple subscribers) and for that you get the first 30 messages each month to other subscribers free!

Wouldn't you like to know more? So far we've been asking all the questions, now it's your turn. To find out how much more there is to EasyLink, send us the Freepost coupon at the bottom of the page or call in at one of our dealers.

Better still, telephone us right now on FREEFONL EASYLINK (dial 100) or write to us at CABLE AND WIRELESS EASYLINK LIMITED FREEPOST LONDON SE1 0YL.

Let us introduce you to faster, more efficient cost-effective communications.

I'd like to find out how EasyLink can give me more than 1,600,000 new business contacts in the next 24 hours.

WORLD TRADE NEWS

William Chislett examines the prospects for improved relations between Mexico and Britain

Mexico brings the case for better relations to London

"THE TWO countries are like two any people at a discotheque who are afraid to ask one another to dance and end up as wall flowers." This is how one British banker summed up the trade relations between Britain and Mexico.

Both countries want to improve relations and Mr Miguel de la Madrid, the Mexican President, will be trying to do just that during his state visit to Britain which begins today. The President will focus on trade and investment and seek to assure the City of London that Mexico is putting its heavily indebted house in order.

The President will be accompanied by Sr Hector Hernandez, Trade and Industry Minister, Sr Jesus Silva Herzog, Finance Minister, and Sr Bernardo Sepulveda, Foreign Minister.

UK businessmen are frustrated by their low level of exports to the twelfth-largest economy in the non-Communist world, with 75m people. Mexico, which would like to diversify its trade away from heavy dependence on the U.S., bemoans its lack of success in exporting to Britain.

British exports to Mexico, chiefly capital goods, peaked at \$450m (£354.3m) in 1980 when Mexico's oil and credit boom was in full swing and the overvalued peso made imports cheap. The crash of the Mexican economy in 1982 has hit UK exports hard; they fell to \$200.6m last year, according to UK customs and excise figures. (Whisky exports plummeted to \$1m last year from a high of \$9m). Now there are signs of a recovery in the Mexican economy and British businessmen do not want to miss opportunities.

On the Mexican side, exports jumped from \$77m to \$267m in 1980 when oil began to be shipped, pushing Mexico's trade with the UK into surplus in 1983.

Mexico is pinning its hopes of restoring historic growth levels of 6 per cent to 8 per cent on increasing non-oil exports such as mangoes and avocados, since its oil revenues (\$16.6bn last year) will be swallowed up for the foreseeable future servicing its \$96bn foreign debt. The British Chamber of Commerce in Mexico

is sponsoring a large exhibition of Mexican goods in London this week.

The countries are expected to sign two trade agreements: the Export Credits Guarantee Department (ECGD) to increase its exposure in Mexico by up to \$100m and Fomex, the Mexican Government's export funding agency, to make sterling credit available for the first time to UK buyers of Mexican goods. Until now, Fomex's funding has been exclusively in dollars.

ECGD's exposure in Mexico would increase to about \$700m, which is still small compared with the \$7.4bn UK commercial bank exposure.

Mexico is keen to attract more British companies to its thriving "maquiladora" sector. There some 700 operations in this area which import components for assembly or manufacture (like radio sets) and export the finished product across the border to the U.S. Only two UK companies, the American subsidiaries of GEC and Cambridge Electronics, have in-bound operations. The book value of UK

investment in Mexico at the end of 1983 was \$351.2m, only 3.1 per cent of total foreign investment, according to the Mexican Foreign Investment Commission.

Several joint ventures may be announced in London: GKN in vehicle components, Morgan

Crucible in ceramics and glass, and Balfour Beatty in a tourism project with the state Government of Sonora. Acorn, whose BBC micro computers are made under licence in Mexico, may announce a deal whereby its Hong Kong operation exporting to the U.S. will be transferred to Mexico.

Less certain, however, are the prospects of Davy McKee which won a \$300m contract in 1982, the largest ever awarded by the Mexican public sector, to build a large steel plate mill at Lazaro Cardenas on the Pacific coast. The project is being squeezed by Mexico's budget constraints; discussions are taking place to try to alleviate current financing problems.

While there is a stronger will to increase trade, there are problems on both sides; with no direct Mexico to London flight, the exporting of Mexican fresh fruit is a difficult business. British Airways is looking at establishing a flight, but so far there is no firm commitment.

Efforts by Mexican businessmen, cocooned by years of protectionism, to be more export

conscious have been dealt a double currency blow which is pricing their goods out of Europe. The Mexican peso, linked to the dollar, is slightly overvalued and the surge of the dollar against European currencies has left the peso flat against sterling, despite a wide-inflation differential between Mexico and the UK.

A sign of hard times it that Intermed, the London-based consortium bank, has become closely involved in promoting trade. Tins of Mexican nuts, cases of bottled beer and, of all things, cans of anti-static spray are spread around its trade office. Intermed needs to find other business to make up for the slump in loans to Mexico.

Intermed now promotes Mexican food, which is little known in Britain. It is calling for Mexicans, a nationalistic people, to find that Texas (once part of Mexico) is exporting canned tomatoes, the corn-based panacea to that Yugoslav and Greece are exporting their own brand of tequila, Mexico's national drink.

Denmark surveys trade barriers

By Hilary Barnes in Copenhagen
A Danish manufacturer of printed circuits stopped exporting to France because payments procedures were so cumbersome that exports were not worthwhile. Goods were sold against cash, but the company had to wait 30 days, but typically took 120 days.

Another company wanted to tender for public sector contracts in Italy, but gave up when it found that the paper on which the tender was to be submitted had to be officially stamped in Italy. These were among the several hundred complaints made by Danish companies in a survey on trade barriers by the Danish Federation of Industries.

France, Japan, Finland, Italy and Austria were the countries which caused some of the biggest headaches for Danish exporters, according to the survey. But there were also a large number of complaints about West Germany and Sweden.

The UK appears to be one of the countries about which the Danes have fewest complaints.

The survey was broken down into the total number of complaints per country, with France, Germany and Sweden top of the list. Each country's share of total complaints was also divided by its share of industrial exports to the UK, 31, was the lowest.

In the latter count, France, 331, and Japan, 307, came out way ahead in Finland, 138, and Italy, 105. The index for France scores high under all headings except customs duties. These include customs technicalities, government subsidies, "buy national" policies and norms.

Government subsidies were described as chronic problem with regard to competition in Sweden and France. "The subsidies in French exports, and especially export credits, is a major problem for Community competitors in countries outside the EEC," say the Danes.

"Buy national" policies cause serious problems in West Germany and the UK. Norway is also included in this count. "The Norwegian offshore sector is almost entirely sealed off from foreign competition even where foreign supplies are offered at decidedly lower prices," said the survey.

Finland's countervailing import tax, which technically is neither a tariff nor illegal under international trade rules, is one of the most serious single complaints. Duties, customs technicalities, "buy national" policies, norms, standards and test approval problems all rank high in the complaints about Japan and the U.S.

The aggressive edge of U.S. trade diplomacy and the cooler, more cautious approach of the EEC were thrown into sharp relief during high-level exchanges between the two trading partners.

The U.S., for its part, is poised for a fundamental shift in its trade policy if there is not a rapid start on a new round of multilateral trade negotiations.

If it cannot engage trade liberalisation on a multilateral basis it will seek to do so on a bilateral basis. This would shift its trade policy into a new mould and signal a threat to the General Agreement on Tariffs and Trade (GATT), hitherto the vehicle for discipline in world trade.

So much became clear at a conference in Maastricht last week on U.S.-EEC relations. Yet both sides, each other's

France wins FFr 5bn Ganges contract

BY PAUL BETTS IN PARIS

COMPAGNIE Generale des Eaux, France's leading private water distribution and treatment company, has been chosen by the Indian Government to lead a consortium of French companies for a major FFr 5bn (£421.22m) project to clean up the River Ganges.

The French group has been asked to supply 27 water treatment plants to cleanse India's sacred, but heavily polluted river. Each of these plants is worth about FFr 200m.

French and Indian officials said the first plant would probably be built at the holy city of Benares.

The Ganges cleanup project was among a series of agreements signed at the end of the state visit to France of Mr Rajiv Gandhi, the Indian Prime

Minister. These contracts reflect the improved relations between Paris and India after the diplomatic controversy between the two countries stemming from the recent spy scandal in India in which France was implicated.

Apart from the Generale des Eaux deal, Jeumont-Schneider, the telecommunications and engineering subsidiary of the Empain-Schneider private conglomerate, also signed agreements worth FFr 500m to supply Indian telecommunications companies with licences for the construction of private telephone digital exchanges involving a total of 1m telephone lines.

Jeumont-Schneider said it had won the industrial co-operation contracts in private digital switches against intense com-

petition from Japanese, U.S., British and West German companies.

India and France have also signed an agreement after three years of negotiations to set up a joint Franco-Indian advance research centre which will focus on four specific factors including biotechnologies, applied mathematics, optical physics and renewable energy sources.

However, no agreement on the proposed sales of 19 new Airbus A-320 twin-engine 150-seater aircraft to India appears to have been reached. Both Airbus and Indian officials declined to discuss the state of talks on the Airbus sales suggesting that a decision would probably be announced in a few weeks' time after Mr Gandhi's U.S. visit.

There also appeared to have

been no breakthrough at this stage in the negotiations involving the sales by Aerospatiale, the French state aerospace group, of 22 Dauphin helicopters worth a total of about FFr 500m to India.

Among other contracts France is still hoping to win are a large defence order for 155 mm howitzer guns which could be worth up to FFr 10bn; an order for six gas turbines involving Alstom Atlantique, the CGE subsidiary, worth about FFr 300m; and the construction of a dam and power station by another subsidiary of the CGE group. France is also hoping to win more telecommunications orders from India as well as computer orders from its nationalised Bull computer group.

Bonn takes firm line on export concessions

BY JOHN DAVIES IN FRANKFURT

THE West German Government has disappointed some sections of industry by taking a firm stand on concessions in talks about the way the country's export credit insurance scheme is run.

Proposals to ease some conditions have run into unyielding resistance in Bonn because Dr Gerhard Stoltenberg, the Finance Minister, is anxious to prevent heavier losses placing a burden on the Federal Government's budget.

The West German export credit insurance scheme is carried out through Hermes, a private company, according to guidelines laid down by the Bonn Government. With the recession and serious international debt problems, the Hermes scheme has run into heavy losses through com-

peting exporters who have not received payments for supplies. After plunging to a DM 730m (£187.6m) loss in 1983, the Hermes scheme's deficit jumped to DM 1.2bn last year.

As a step towards covering the losses, exporters were confronted with an increase of an average of 40 per cent in Hermes fees from April last year.

Since then, some exporters, particularly those dependent on orders from developing countries and other countries considered risk areas, have been pressing for improvements. Economics Ministry officials have made plain to exporters that proposals which could lead to extra costs cannot be contemplated. Some proposed changes which are considered neutral in cost terms are still

being examined.

Last week, Dr Klaus von Linsinger, finance chief of Lurgi, the engineering and process plant concern, questioned the line taken by the Government. He said that talks about improvements in Hermes conditions had met with little more than "understanding" in Bonn.

Dr von Linsinger said that 500,000 jobs depended directly or indirectly on West Germany's process plant industry, which, in turn, was highly dependent on orders from abroad. To back up this work through Hermes export credit insurance would not amount to subsidy but sound economic policy, he asserted. The West German Government is adamant that its export credit insurance scheme should avoid subsidies and operate on sound commercial lines. This

policy is backed by exporters, but some of them are also keen to emphasise the employment benefits of supporting export orders.

Government officials argue that the Hermes scheme is being operated "flexibly" and that individual cases go virtually to the limit of what is justifiable in risk management.

Hermes covers less than 10 per cent of West Germany's exports. But without Hermes coverage, it is difficult or impossible to obtain finance for exports regarded as a financial risk.

Although West Germany's trade has been buoyant, the main impetus has come from orders from industrialised countries, for which Hermes coverage is generally considered unnecessary.

Court rules on Italian car imports

By Ivo Dawson in Brussels

ITALY has been ordered to dismantle complex and costly registration formalities for foreign cars entering the country under a ruling by the European Court of Justice.

The Court found that special registration rules for cars imported independently from established distribution networks constituted a breach of Community competition rules. A parallel import of these vehicles, largely from West Germany, France, Belgium and the Netherlands, had risen to 80,000 in 1984 at pre-tax prices.

In a bid to stem the tide, the Court claims that the Italian Government introduced the new rules last July, increasing their impact to such a point that by March this year independent imports were paralysed.

Italy is now required to revert to regulations in force before July last year.

Fixed air fares system to be considered for Europe

BY MICHAEL DONNE, AEROSPACE CORRESPONDENT

AIR TRANSPORT in Europe needs a fixed fares level, airlines are free to adjust their fares automatically.

The ECAC says it is not advocating abolition of the bilateral system, recognising that individual governments wish to retain some sovereignty over their flag airlines' sectors. The zonal tariff system, it says, should supplement the bilateral system.

A separate report to the forthcoming meeting, prepared by a rapporteur (whose task was to study European air transport affairs), points out that the ECAC, comprising 22 member states, is much wider than the European Economic Community of 10 nations.

The order for the third A 310 Airbus originally placed by British Gaidonair Airways, now relinquished, is being picked up by Turkish Airlines.

Saudi Arabia contracts worth \$58.58m

By Finn Barre in Riyadh

THE WATER and Sewage Department of Saudi Arabia's Western region has awarded a pair of contracts worth a total of \$58.58m (£46.49m).

Kara Establishment, a Saudi company, has won a \$35.55m contract to build a twin pipeline water network in the city of Mecca. The 18-month contract entails construction of seven reservoirs and three pumping stations for potable and non-potable water.

Rio Sazase Turkes FA, a Saudi-Turkish joint venture, won a \$23.03m contract to build a 1-metre diameter twin pipeline and a pumping station. The 18-month contract requires construction of a 9.9 kilometre pipeline to carry water to the Ararat Reservoir and a 17-kilometre pipeline from Ararat to Mina in Mecca. This is the second large water works contract won in Mecca by Rio Sazase.

Partners with a different approach to trade diplomacy

Paul Cheeseright assesses the conflict in attitudes to new Gatt talks

THE aggressive edge of U.S. trade diplomacy and the cooler, more cautious approach of the EEC were thrown into sharp relief during high-level exchanges between the two trading partners.

The U.S., for its part, is poised for a fundamental shift in its trade policy if there is not a rapid start on a new round of multilateral trade negotiations.

If it cannot engage trade liberalisation on a multilateral basis it will seek to do so on a bilateral basis. This would shift its trade policy into a new mould and signal a threat to the General Agreement on Tariffs and Trade (GATT), hitherto the vehicle for discipline in world trade.

So much became clear at a conference in Maastricht last week on U.S.-EEC relations. Yet both sides, each other's

biggest trading partners, are agreed on what they want to achieve: both want new multilateral talks on trade liberalisation. The problem is means and timing.

The U.S. is pushing for an early 1985 start. The EEC is saying, by all means start the preparations, but everybody needs to know where they are going.

"We cannot afford a failure and therefore, before embarking on such negotiations, we must do everything we can to ensure that they will be a success," said Mr Willy de Clerq, the EEC external relations commissioner.

For the U.S. this sort of approach is diversionary, a delay tactic. Peter Murphy, the deputy U.S. trade representa-

tive, talked of a "dialogue of the deaf" of there being "no meaningful effort to work out common positions."

However, if the U.S. is fed up with the EEC, it is angry with the developing countries, many of whom it sees as dragging feet over a new round. "We have argued until we are blue in the face and we get the impression that the developing countries are not all that interested in multilateral negotiations," said Mr Murphy.

The EEC is more relaxed about this. One simply has to work for consensus; it takes time but there is no alternative to the Gatt system, Mr de Clerq said. "There is no sense in scrapping the only way we have got just because its

speed does not match our ambitions."

But the U.S. takes the attitude that if it cannot obtain what it wants one way, then it must follow another route.

"The time for speeches is over. With the situation in the U.S. we won't have the option of sitting idly for a long period of time," said Mr Murphy. The U.S. wanted multilateral negotiations, "but we could be forced to go the bilateral route."

On this basis the U.S. would seek trade liberalisation pacts with individual countries or groups of countries and in doing so would ride over the basic provision of Gatt—that you concede to one country you

concede to the rest, the most favoured nation principle.

Administration officials are not too concerned about that. They believe that once the process starts it would set off a train of events which would move the multilateral system forward to more liberalisation.

The Reagan Administration has already been holding talks with Canada and the countries of the Association of South East Asian Nations, spurred by a Congress increasingly worried about the \$103bn (£103bn) trade deficit. The Administration wants to use liberalisation to head off congressional flirtation with protectionism.

But popular pressures work a different way in Europe. Most specialists believe that the

EEC's collective approach will remain cautious at least until after the French elections early next year. The Reagan Administration carries Congress on its back. The trade liberalisers in the EEC, like the UK and West Germany, carry the French electorate.

So Mr de Clerq warns that "this is not the time to adopt a holier-than-thou approach" and "Gatt is not a forum for furthering narrowly conceived policy objectives."

Mr Murphy accepted that the U.S. does go around with a bible in one hand and a six-gun in the other. "To a degree this is true," he said. "The only logical alternative is to put down the bible and carry two six-guns."

Not true, riposted Mr de Clerq. Why not two bibles?

West Germans, Swiss refuse to join \$450m Argentine debt rescue

BY PETER MONTAGNON IN BASLE

WEST GERMANY and Switzerland have flatly refused to take part in the \$450m (235m) bridging loan being sought by Argentina to help pay off interest arrears on its \$48bn foreign debt.

The position of the two countries was made clear in two days of sometimes heated discussion at the annual meeting of the Bank for International Settlements here. Officials argue that Argentina has made itself ineligible for further government assistance because of its persistent failure in the past to get to grips with its economic difficulties. Also, they say, Argentina's debt problems do not pose a threat to the world financial system as a whole.

The open rejection of Argentina's request by two major European financial powers has come as a blow to its efforts to raise the credit which it had sought to portray as a significant international gesture of solidarity with its new-found democracy.

But central bankers here said yesterday the loan was still

likely to go ahead with other countries arranging their contributions on a bilateral basis. Some, such as the U.S., Mexico and Venezuela, have already indicated their willingness to put up money.

Among other European countries, Holland is also taking a more conciliatory approach, largely because previous export credits to finance oil and gas pipeline developments have made the Netherlands the second largest official lender to Argentina after the U.S.

Though discussions continued among central bankers after the BIS annual meeting ended here yesterday, it is now expected to take a few more days before the shape of Argentina's bridging loan becomes clear.

The country is seeking the money to finance a payment of \$150m to the U.S. in interest on commercial bank creditors which has to be made shortly to prevent its debt being officially declared "value impaired" in the U.S., forcing banks there to make loan-loss provisions.

World Bank to guarantee commercial loans for Chile

CHILE HAS overcome U.S. opposition to a plan to attach World Bank guarantees to some of the loans it is seeking from its commercial bank creditors to meet external financing needs for this year and next, according to central bankers attending the Bank for International Settlements annual meeting in Basle, Peter Montagnon reports.

But the amount of such financing is now likely to be limited to \$150m (\$118m) rather than the \$250m originally sought. This will necessitate an increase in the planned unguaranteed portion of the commercial bank credit from \$300m to \$450m, they said.

Details of Chile's new financing package are to be discussed again at the end of this week at a meeting of leading bank creditors chaired by Manufacturers

Hanover in New York. The meeting, which could last several days, is expected to set final terms on the deal.

The adoption of the World Bank guarantee scheme marks a new departure in dealing with the debt crisis, as it will be the first time that fresh loans from commercial bank creditors have carried any official guarantee.

But in dropping its opposition, the U.S. has insisted that the scheme is not presented as setting any precedent for other countries.

Chile is seen as a special case because payments problems have persisted, despite its strict adherence to IMF adjustment programmes. This is mainly due to the weakness of the copper price, which is a factor outside the country's control.

AMC threatens to bring in imports

By Terry Dodsworth in New York

FORMAL negotiations on a new wages contract at American Motor (AMC), the U.S. affiliate of Renault of France, began in Chicago yesterday as the president of the company threatened to replace American-made models by imports if necessary.

In a newspaper interview, Mr Jose Dedeurwaerder, who took over as president of AMC last year, said that the company believes its labour costs must match those of the Japanese companies building cars in the U.S. AMC would lose at least as much money in the second quarter of this year as in the first, he added, when it had a deficit of \$29m (\$23m).

Mr Dedeurwaerder's remarks emphasise the company's determination to reduce its labour costs at its Wisconsin car-making plants, where it claims that its 6,000 workers are the best paid in the U.S. motor industry.

The negotiations began after weeks of wrangling over the issues to be discussed. The company had initially insisted upon the union's agreement to a list of tough preconditions for talks, including an immediate wage cut, a reduction in annual paid holidays and other concessions.

In agreeing to the negotiations, AMC appears to have given some ground on these preconditions, but it has nevertheless presented a major discussion document to the union which will involve talks on most of the items at issue between the two sides.

At the same time, the company is forcing the union to negotiate with the threat of closure hanging over the two Wisconsin plants at Kenosha and Milwaukee.

Sarney backtracks over Brazilian land reform

By Andrew Whitley in Rio de Janeiro

THE SARNEY Government in Brazil, shocked by the hornet's nest of protest and violence stirred up by its ambitious, recently unveiled land reform proposals, is hastily backtracking from what would have been the first real test of its reforming intentions.

Two weeks ago, amid much fanfare, the Government announced that over the next 15 years it aimed to provide some 7.1m landless farmers and rural labourers with their own land.

The announcement simply confirmed an election campaign promise made by the then opposition Democratic Alliance. Nor was anything proposed—a far-reaching agrarian reform act reaching back to Brazil's statute book since 1964, but never implemented.

The announcement of the National Agrarian Reform Plan acted as a starting pistol for tens of thousands of squatter farmers and their families to invade disputed land. Santa Catarina and Parana states in the developed south and the wild frontier regions of Goias and Para, in the north of the country, have been at the centre of the disturbances.

In response, the big landowners have been taking on the hired gunmen traditionally used in Brazil to sort out land conflicts.

Faced with such an unexpectedly strong reaction, the Government has clarified that any land reform measures will only be applied to uncultivated land, as opposed to farmland already in use. It is likely to benefit only about 100,000 farmers in the next 12 months.

Jamaicans promised no respite from austerity

Canute James on Kingston's efforts to revive a stagnant economy

Agriculture recorded a 10 per cent growth but sugar and bananas, the main commodity exports, are performing below levels of five years ago.

The situation would have been worse if not for steady growth in tourism: gross earnings of \$400m last year were marginally up on 1983 levels.

Mr Seaga says much of

Jamaica's support from the international financial community is the result of his personal standing. This may explain, to some extent, continuing support from the International Monetary Fund, despite the economy's repeated inability to meet performance criteria.

The IMF granted two waivers last year on a \$143m credit pack-

age when the economy came up short in its net international reserves.

The IMF granted two waivers Seaga to standby credits totalling \$120m to be disbursed over 20 months starting in August. The World Bank has just given the island \$55m to aid efforts at economic reform; these will be supplemented by \$135m which the Government plans to borrow abroad this year.

Mr Seaga's task is, by any measure, Herculean. There has been success in one major effort at reform: the deficit in the fiscal budget was cut from 17 per cent of GDP to 7.2 per cent last year, but at the cost of increased taxes and 6,000 government jobs.

The Prime Minister says the target for this year is a deficit of 4 per cent. Most of the savings will come from further trimming of state sector jobs. Unemployment is officially put at 26 per cent. The projected deficit on trade this year is \$468m, \$24m more than last year.

The Prime Minister reports an improvement in the balance of payments, from a deficit of \$312m.

The "pain" which the Prime Minister admits is being felt by Jamaicans is the result of the social cost to the country's poor: electricity, water and telephone rates were raised between 114 per cent and 60 per cent last year.

The devaluations and higher

import duties have led to repeated increases in the price of basic food: the national minimum wage is the equivalent of \$9.45 per week, which will buy three chickens in the supermarket.

Trade unions, known for their militance, have so far accepted the Government's appeal for moderation. Such temperance may not last much longer.

The constabulary and nurses have rejected Government offers of wage increases well below the level of inflation. They have been less demonstrative than the teachers, who have not only rejected the offer but have given pupils unexpected holiday by holding sporadic one-day strikes.

The People's National Party, led by Mr Manley, and which is no longer the official opposition after refusing to contest the last general elections a year and half ago, has also been staging public demonstrations to accuse the Government of mishandling the economy and raising for an election.

The situation has depleted Mr Seaga's political stock: public opinion polls four months ago put the ruling Jamaica Labour Party well behind the PNP in popular support.

This has not dented Mr Seaga's optimism: "We expect to achieve positive economic growth by 1986. That is if there is no more slippage." That is a bold hope for an economy painfully balanced between sure ground and a quagmire.

I first met Joanna at a new health club I'd just joined. Seeing her perched at the bar, the membership fee seemed entirely justified.

I offered her an apple juice. Opting for white wine, she explained she was there not to work out her body, but the final details of buying the club.

Joanna, it emerged, runs a health empire. Everything from gymnasia to

She looks like the type of woman who sleeps with her micro-computer

One touch instantly suspends any program you're running, turning the Alphatronic into a typewriter, with everything you type appearing on the screen.

"Mmmm," I said, "but how does that affect the human body?"

"Everything's totally accessible," she replied, "easily reached and so less stressful to use. There's even a wrist-rest."

Perfect Figure.

Her mention of rest reminded me I should be doing precisely the opposite back in the gym.

"Good luck with your take-over," I said to Joanna as I excused myself.

"Oh, I just have to reduce a certain figure," she said.

"Something she'll find very easy," I thought, "with her Alphatronic."

the clothes people wear in them. Or rather, almost wear in them.

A beautiful business.

"I keep it all in my new Alphatronic," she announced.

"Keep what?" I inquired, feigning ignorance of this, one of the most exciting steps forward in business micro-computers for years.

"All my accounts," she continued, "all of the information I need to run my companies."

Well, having just bought one of the new Alphatronics for my own firm, I knew that here was a micro which wasn't just a copy of everything else.

Impressively IBM compatible, it's anything but one of those trendy machines that date quickly and won't run the programs you need to run your business.

"Apart from making people beautiful, my business helps them

relax," she said, "so, I didn't see why I should get tense and lose sleep huying a computer which is supposed to help me achieve all that."

Warmed up quickly.

"Which is why you went for the Alphatronic," I said.

"Precisely. It's much faster and better," she enthused, "thanks to one of the new Intel 80186 16-bit processors. And with a capacity large enough to easily accommodate my plans for expansion."

"Others," she continued, "take up to two minutes to warm up. But with that 16-bit processor, the Alphatronic's ready to use in seconds. Then it reacts faster to your instructions."

Lovely shape.

"The characters are all nice and large," she went on, "clearly readable, with pin-sharp resolution."

"But being so concerned with aesthetics, surely looks were important to you, too," I ventured. "And don't all micro's look the same?"

"Not my Alphatronic," she replied, "lovely shapes, soft, relaxing colours and ergonomically designed, so it fits the human body perfectly. Triumph Adler is part of VW-Audi, and they apply the same design principles to their computers as VW-Audi do to their cars."

Reflecting on this, I pushed her for more.

The human body.

"Triumph Adler probably know more about keyboards than anyone," she said, "and this one has eighteen function keys where others only have ten, so it's much less complicated to operate."

At this point, I recalled the Alpha Key.

Rise in industry's costs lowest for four years

BY MAX WILKINSON, ECONOMICS CORRESPONDENT

THE PRICES paid by industry for raw materials and food rose by only 3.6 per cent in the 12 months to May, according to official figures out yesterday.

The rise, which was the smallest since early in 1981, was less than half the average rate of increase last year and compares with a rise of more than 9 per cent in the first quarter of this year compared with 12 months ago.

This substantial easing of inflationary pressure reflects the 12 per cent appreciation of the pound since its nadir at the end of January.

It will give further encouragement to the Government that the inflation rate measured by the annual increase in retail prices will fall from the present uncomfortably high figure.

This was 6.9 per cent in April, and the May figure, to be published on Friday, is likely to show inflation at more than 7 per cent.

However, the Treasury has insisted that this rise would be temporary, as it reflects the earlier fall of sterling during 1984. It is still sticking to its forecast that inflation will

year were 3.3 per cent lower than in the fourth quarter of 1984, and nearly 9 per cent lower than their level a year earlier. Although there was a slight rise in April, prices were still below their level in the closing months of last year.

In sterling terms, world commodity prices in April were about 3 per cent lower than in February but 1.5 per cent higher than the first quarter of 1984.

Yesterday's figures from the Department of Trade and Industry showed that the index for the price of materials and fuels, bought by manufacturing industry, fell by 1.1 per cent between April and May, bringing the 12 month increase in the index down from 5.2 per cent to 3.6 per cent. More than half of this fall was the result of lower prices for food materials.

The rate of increase of industry's selling prices was fairly steady at 5.6 per cent in the 12 months to May compared with the 5.7 per cent recorded in April.

The rise in the wholesale price of manufactured goods apart from food, drink and tobacco was also little changed at 6.4 per cent in the 12 months to May.

Spending in shops close to peak level

By Philip Stephens

BRITAIN'S spending boom in the shops shows no sign of slowing, with retail sales last month climbing to the second highest level on record.

The Department of Trade and Industry said yesterday that the volume of retail sales rose by nearly 1 per cent in May compared with the previous month, to stand 4 per cent higher than a year earlier. Officials said that the increase was spread broadly across the monitored sectors.

The figures confirm a general upward trend in sales since the early part of the year.

Over the past three months, the volume of retail sales was 1 per cent higher than in the previous three-month period and 5 per cent above the same 1984 period.

The buoyant trend partly reflects the fact that earnings are still running well ahead of inflation, despite the recent acceleration of price rises. A number of special factors - including tax cuts in the budget last March, the ending of the miners' strike and public sector pay awards - may also have boosted spending last month.

Acorn may sell some subsidiaries

BY JASON CRISP

ACORN, the troubled UK home computer group rescued this year by Olivetti, is to make further job cuts and may sell some of its subsidiaries because of a renewed financial crisis.

Since the financial rescue in February, Acorn's trading position has deteriorated, putting further pressure on its cash flow. As a result, Acorn may try to renegotiate terms with its bank and creditors.

The company is now finding it very difficult to make the staged repayments to its creditors that were agreed at the time of the rescue. Acorn's largest creditor is A. B. Electronics.

Acorn, which makes the BBC Micro computer, has seen a significant

fall in sales this year compared with last. The reduced business is affecting Acorn's borrowing limit with Barclays Bank, which is based on a formula that includes minimum levels of stocks and debtors.

The company is expected to lose another 70 or 80 jobs by the beginning of July. The company at present employs 350 people, compared with 470 at the beginning of the year. A further 30 to 35 are scheduled to leave in the next few weeks. Acorn plans to cut staff to 250 through further redundancies and disposals.

In addition to selling its stakes in Torus and IQ Bio, the Acorn board is considering selling Acornsoft, its software subsidiary, Laserdrive, a

joint venture with SSR, and Acorn Video, which was set up last year to develop interactive videodisc systems.

The move is to concentrate on Acorn's main activities of selling computers for home and education and developing systems for business and scientific use. The company emphasised last night that it was not making any cuts in the development of its basic products.

Last week Mr Alex Olivetti, a senior executive at Olivetti, the Italian office products group, was appointed acting managing director of Acorn. The appointment was made after the company failed to find a suitable outside chief executive.

Dr Alex Reid, chairman and acting

chief executive, has also agreed to stay on at Acorn for another four months because of the worsening situation. Dr Reid said Mr Olivetti's appointment did not reflect a tightening of control by Olivetti, which bought a 49 per cent stake for £10.4m earlier this year.

Acorn's renewed difficulties will not help Sinclair Research to seek the £15m it requires to ease its own financial crisis. Acorn has been affected by the weak state of the British market and is not yet benefiting from the marketing arrangements with Olivetti.

The Italian group is expected to sell the well regarded BBC Micro in other countries but has not placed any significant orders with Acorn.

Systime sued by U.S. company for £5m

SYSTIME, the computer group, is being sued by Digital Equipment of the U.S. for £5m for the alleged illegal copying of printed circuit boards, writes Jason Crisp.

Systime, once partly owned by the now defunct National Enterprise Board, was taken over by Control Data of the U.S. earlier this year after getting into severe financial difficulty.

In addition to taking legal action against Systime, DEC has al-

so refused to renew its "original equipment manufacturer" agreement with the company. Systime, which sells mini-computer systems based on DEC equipment, will no longer be entitled to discounts of 30 per cent to 40 per cent.

Systime said last night that it would be defending the action vigorously and planned to file counterclaims in the near future. The company also said that it had been reducing its depen-

dence on DEC equipment. Just after DEC took a controlling interest in Systime, it launched two small computer systems.

DEC's legal action follows the failure to reach an out of court settlement. The dispute dates back to March last year when DEC discovered several printed circuit boards which it alleges infringed its copyright in design. The boards were discovered when they were returned by customers.

DEC first issued a writ last July. It is seeking payment of damages for sales of the PCs over the last six years.

DEC also claimed that its proposals for an audit to establish the full extent of Systime's alleged infringement had been rejected.

Systime said last night that existing customers would still be covered by maintenance agreements between Control Data, its parent, and DEC.

Introducing Jazz.

Now Macintosh is Lotus compatible.

Lotus' success and reputation have been built on products like 1-2-3[™] and Symphony[™] - powerful, analytical tools that get the most out of hardware.

And now we've given the Mac the Lotus touch. Jazz[™] - the first multi-function business package written specifically for the Mac. We looked at the essential style of the hardware - friendly, accessible, powerful - and designed the software that would best use its talents.

Jazz[™] could well be all the software you will ever need. It's a complete office system on one disk - word processing, spreadsheet, database, graphics and communications. Each function is more powerful than any other program currently available for the Mac, and the spreadsheet is completely compatible with 1-2-3[™], which set the industry standard.

All the functions can be used independently. But it's when you bring them together that Jazz[™] really comes into its own. The word processing function has a unique Lotus feature called 'HotView', which enables you to integrate information from any of the other Jazz[™] applications.

Say you're preparing a document or letter. You can illustrate a point by inserting a 'graph' from the graphics function and then personalise it with names selected from the database.

The Jazz[™] tutorial disk will put you in charge of the program within a few hours, with one set of commands to learn for all 5 functions.

And, as with all Lotus products, our user commitment extends to training and service back-up. We have a network of Authorised Training Centres throughout the country, staffed by

personnel trained by Lotus to help you get the most from your software. And there's a telephone number you can call for further help or advice.

So if you're considering ways of getting more out of your business - welcome to the Jazz[™] age.

You can pick up the beat by ringing 01 200 0200. We'll send you a brochure and tell you who to see about a demonstration.

MPs give warning on defence budget

BY PETER RIDDELL, POLITICAL EDITOR

THE DEFENCE budget is likely to decline in real terms in the next few years with increasing pressure on overall capabilities, the defence select committee of the House of Commons warned yesterday.

The report, on Britain's defence commitments and resources, was published ahead of the two-day Commons debate on the defence estimates starting tomorrow.

The cross-party committee warns that the future defence budget may fall substantially short of the resources required to maintain capability and to meet commitments.

The report suggests that on certain assumptions defence spending in 1987-88, excluding the Falklands, will be 6.1 per cent lower in real terms than the 1985-86 budget.

The repeated view of Mr Michael Heseltine, the Defence Secretary, that there is no immediate need for a major defence review is challenged. The committee fears that

"the cumulative effect of managing the defence budget in the manner endorsed in the White Paper (policy document) may result in a defence review by stealth."

Commenting yesterday on the committee's report, Mr David Steel, the Liberal leader, argued that the Prime Minister's "delusions of grandeur on Trident (nuclear missile system) will be paid for by the neglect of Britain's real defences." He urged Mr Heseltine to undertake a fundamental review now.

The defence committee is sceptical about how much saving will be produced in the short-to-medium term through improvements in efficiency, increased competition in the placement of contracts, collaboration and flexible planning.

The MPs consider that possible savings will not be enough to avoid slippage of programmes and deferment of the dates when equipment comes into service.

Welsh miners face loss of 1,800 jobs

By Robin Reeves

THE NATIONAL Coal Board (NCB) told Welsh miners' leaders yesterday that it wants a cutback of 1,800 jobs in the South Wales coalfield over the next 18 months. The coalfield employs about 19,500 miners.

However, an expected list of South Wales pits, which the NCB proposed to put into the colliery closure review procedure, failed to emerge during a joint management-union review of the coalfield's prospects in the wake of the year-long miners' strike.

The figure of expected job losses was given by Mr Emyln Williams, the South Wales miners' president, after the meeting.

You can't stay on top of the market unless your index does.

Introducing the Merrill Lynch Treasury Index.

Most bond indices come out at the end of the day—well after the fact. And most concentrate only on the long-term sector—a fraction of the market and a disproportionately volatile fraction at that.

But now Merrill Lynch Capital Markets introduces an index that gives fixed income investors the same kind of useful measure that equity investors get from the S&P 500 Index.

The Merrill Lynch Treasury Index is the first to give you the pulse of the market when you need it—*hourly*, with on-line prices taken directly from our trading floor. The indicators are flashed over Telerate and Reuters.

The Merrill Lynch Treasury Index also covers the breadth of the market. First, a composite index includes all U.S. coupon Treasuries with maturities of one year or more. Then, seven subindices reflect each of the key short-, medium- and long-term maturity sectors.

Our Treasury Index is market-value weighted. In addition to total return, it provides price indices and average characteristics for each sector—coupon, yield, maturity and duration—as well as par amounts outstanding.

It also includes a daily market commentary prepared by our highly rated Fixed Income Research professionals. The Treasury Index takes its place beside our other prestigious bond indices: the Taxable Bond, Municipal Bond, and the recently introduced High Yield and TIGR® performance indicators.

In short, the Merrill Lynch Treasury Index is more complete, more accurate and more frequent than any other. And therefore, more useful.

Look for it. Once an hour. Because you can't stay on top of the market unless your index does.

The Merrill Lynch Treasury Index appears hourly on Telerate, pp. 590-592, and Reuters, pp. MLJX, MLJY, MLJZ. (The Merrill Lynch Treasury Index also appears daily on the Dow Jones Capital Markets Report.)

UK NEWS

BRAZIL EMERGES AS FORCE TO SHAPE WORLD MARKET

Paper industry faces slowdown

BY ANDREW FISHER

THE SLOWDOWN in growth prospects for world paper demand and the sizeable growth of the pulp industry in Brazil were two of the key themes tackled by speakers at the two-day Financial Times paper and pulp conference, which began yesterday.

Week economic progress in Western Europe in the next two years is expected to lead to a drop in demand for paper, said Mr Martin Glass, market planning manager of EEC International, part of the English China Clays group.

Already, growth in demand was slowing down this year after an excellent 1984. Total printing and writing paper consumption in Europe was up by 9 per cent last year, partly due to a sharp rise in stocks. This year's rate is likely to be only 3 per cent, depending on stock movements.

After the forecast declined in 1986 and 1987, "the recovery phase is predicted for 1988, with a good growth year again in 1989." The average growth rate for paper consumption in Western Europe between 1985 and 1989 would be around 1.5 per cent a year.

He predicted that over-capacity would continue to be a feature of the industry. "It is almost a natural and arguably an essential condition for a healthy, growing industry in a free market environment." The problem, he added, was not how to avoid over-capacity, but "how to live with it."

Nearly 1.2m tonnes of new capacity was likely to be installed in Europe between this year and the end of 1987 in the form of new plant or major expansions of existing factories. Almost half of this would be in 1985. The additions did not include productivity improvements to the present 18m tonnes of capacity, which have generally added an extra average 2 per cent annually to output.

Over the whole of the five years to 1989, the EEC was forecasting only a 1m tonne rise in paper consumption in Western Europe. But European producers' competitiveness would be affected by the dollar exchange rate, as well as by demand patterns. U.S. producers are also building new capacity.

Last year, aided by the strong dollar, the European industry's exports to North America totalled 114,000 tonnes sold there in 1981. Total exports worldwide from Europe reached a record 2.2m tonnes last year against 1.4m in 1981.

But the thriving export trade with North America, now taking half of Europe's paper exports compared with 10 per cent in 1981, would not be repeated for some time after this year, Mr Glass said, especially since the dollar was widely held to be overvalued.

Another of yesterday's speakers, Mr Jan-Sture Enander, executive vice-president of Svenska Cellulosa (SCA) of Sweden, outlined the consequences of lower demand growth and ways in which companies could deal with this. Like Mr Glass, he thought the modern electronic office enhanced rather than eroded demand for paper.

"Existing and new electronic technology won't have any decisive impact on paper consumption for the rest of this century," he stated. "During the next few years, office automation will tend to stimulate a fairly large rise in printing and writing paper consumption because of the increase in information and its distribution which will still be on paper."

But overall, conservative estimates for future growth in the paper and board markets indicated it would be no more than 2 per cent a year. Since the total world market had expanded, volume growth would still be high - about 45m tonnes in both the 1980s and 1990s. This, said Mr Enander, corresponded to an annual rise in consumption of some 4.5m tonnes, or between 20 and 30 large paper machines a year. "There is still plenty of growth potential in the pulp and paper industry." Global consumption of both newsprint and packaging materials would show sustained growth.

The need for cost efficiency, however, was becoming more important. "In real terms, costs must not move above their present level." It would be preferable if they would fall slightly as has tended to happen since the early 1980s.

Mr Enander also believed that, apart from efforts to save costs by individual mills, "each region should identify and focus on the product area in which it enjoys the maximum comparative advantage."

He described SCA's own efforts to shave costs in wood, energy and labour. Through concentrating products such as newsprint which did not use so much wood, the Swedish group had reduced wood consumption per tonne of output by about 25 per cent over the past decade.

SCA had also been using more

recycled fibre in its board production. As for energy savings, one pulp mill had cut its oil use per tonne of output from 210 litres at the turn of the 1980s to 40 litres. The actual cost had gone down from \$57 to \$17 per tonne.

Savings on labour costs had also been made by concentrating on fewer production units, and using high technology. But high capital costs would mean that most of the industry's future growth would come through modernising existing plants rather than building brand new capacity.

FINANCIAL TIMES
PAPER
AND PULP
CONFERENCE

Describing prospects for the pulp industry in Brazil, Mr Edmar Lorenz, president of Aracruz Celulose, said it would have to compete for capital with other priority needs in a country so short of capital. But, he commented, "I have no doubt that we will come out ahead in the competition for national or foreign capital."

Last year, he said, Brazil exported some \$700m worth of pulp and paper and was the largest exporter of hardwood pulp into a world market where use of eucalyptus pulp had grown faster than any other kind of fibre. He said he was confident that use of eucalyptus pulp would continue to grow.

Real productivity per hectare had grown by 135 per cent in just over 10 years. Aracruz now produced 18.5 tonnes of pulp per hectare of forest each year against around 1 tonne per hectare in Scandinavia, the northern U.S. and Canada.

Also highlighting the position of Brazil was Mr Willi Klein-Gamewyk, president of FWA Papierwerke Waldhof-Aschaffenburg of West Germany. Pulp from Brazil would grow to a market size which would determine the shape of the world market and become a serious challenge to producers in Scandinavia and Canada.

There would also be more integration in the Brazilian industry between pulp and paper production, he forecast. "In the 1990s, Brazilian paper machines will have reached

the same international standard as have the pulp mills today."

Focusing on the forthcoming membership of the EEC by Portugal and Spain, Dr Antonio Caldeira, chairman of Portugal's Empresa de Celulose e Papel de Portugal, said new market opportunities would develop as a result.

Rising production of eucalyptus pulp in the Iberian peninsula had led already to increased sales to EEC paper producers without their own integrated source of pulp supply. "We anticipate that in 1985, 75 per cent of the bleached eucalyptus pulp used in the EEC will be produced in Portuguese and Spanish mills."

Two executives from the worlds of newspaper and newsprint, Mr Frank Barlow, chief executive of the Financial Times, and Mr John Kila, president of Chapelle Darblay of France, described what they saw as the buoyant outlook for the industries.

Newsprint, said Mr Barlow, were not in danger of being displaced by new electronic media. "Although many newspaper companies will allocate considerable resources to the new electronic information dissemination systems, the printed newspaper will remain the mainstay for a very long time to come."

Newsprinters had advantages over electronic media - ease of scanning, speed of access, portability, random access and a permanent image. "In this age of the electronic media, in the United States of America, newspapers are booming with record circulations, record advertisement volumes, record paging and record profits. The combined circulation of the national dailies in Britain is as high as it was 20 years ago."

Satellites would bring enormous benefits, although cost was still a problem outside the U.S. Full use of satellite services posed a threat to governments' telecommunications revenues and also allowed an unrestricted flow of information. Thus, he thought, "communications technology will have a bigger impact on media than any other factor."

Mr Kila of Chapelle Darblay said the newsprint market had grown slowly over the past 10 years or so, and expected a fairly healthy rate of some 2 per cent a year in Europe for the rest of the 1980s. He argued that cost advantages in raw materials and freight justified investment in European mills, such as in France, outside the Nordic area.

SIEMENS

The resources and the commitment in industrial automation

The body assembly plant for the Jaguar XJ6 uses a Siemens body-tracking system to follow the progress of each car on the assembly line. This is just one of a wide range of automated functions realised in computer integrated manufacturing.

Siemens specialises in engineering solutions for the identification, control and management of the production process. With Siemens, the combination of software, hardware, commissioning and support services originates from a single source.

The application of real-time control systems requires a thorough understanding of the manufacturing process and a complete knowledge of hardware and software, from the building of control systems to the control of chemical reactions. Production control and monitoring provides the basis for constant appraisal and analysis of throughput and quality.

The scope of Siemens achievements goes far beyond manufacturing control.

In the UK we also have a long-standing commitment to medical systems, telecommunications and electronic components.

Siemens is one of the world's largest electrical engineering companies. Represented in 120 countries, we employ over 300,000 people. Of these, more than 20,000 are employed in research and development, where we invest over £4 million every working day to ensure Siemens' key role in the technology of the future.

Court approves Bank's plan to restructure JMB

BY RAYMOND HUGHES, LAW COURTS CORRESPONDENT

THE FINANCIAL year of Johnson Matthey Bankers (JMB) is to be extended for three months until June 30 to allow a recapitalisation by the Bank of England to take place and avoid the need to show a deficiency of capital in the balance sheet.

JMB's directors are concerned that, if accounts are sent out which look "unusual," customers will take the conservative course of withdrawing business.

The banking supervision division of the Bank of England is satisfied that after the proposed recapitalisation the company will be adequately capitalised for the supervisory purposes of the Bank.

The first stage in the recapitalisation of JMB, which was rescued by the Bank of England last autumn, was approved by the High Court in London yesterday.

The court sanctioned the reduction of the company's capital from £75m to £100m by the cancellation of 50,000,000 £1 shares held by Securities Management Trust.

Miss Mary Arden, counsel for JMB and the Bank of England, told Mr Justice Vinelott that capital of that and upwards had been lost or was unrepresented by available assets.

After the reduction, the Bank of England would inject £100m into JMB - £75m by way of equity capital and £25m loan stock, immediately after that, the Bank of England would repay the £100m it deposited with JMB in November.

Miss Arden said that JMB would continue to be a recognised bank.

Mr Rodney Galpin, executive director of the Bank of England, who became chairman of JMB last October, said in written evidence that JMB's directors were satisfied that, after the recapitalisation, the company would have sufficient capital to continue its activities on their current scale.

The intention, Mr Galpin stated, was to sell JMB - which at the moment is a wholly owned subsidiary of the Bank of England - "as soon as reasonably practicable."

TVR plans increase in sports car output

BY JOHN GRIFFITHS

TVR, the sports car manufacturer, plans to expand its production significantly, reflecting a change in its business strategy.

It should result in TVR, which has been working a seven-day week for the past 18 months, increasing output of its £15,000-plus sports cars to between 800 and 900 a year, accompanied by a rise in its workforce to about 180.

TVR - which is based in Blackpool, north-west England - for many years had followed a policy

that, because of the cyclical and volatile nature of sports car markets, it would maintain a production ceiling of about 500 cars a year and a workforce of about 100. That it was

reached, struck a balance allowing it to cope with peaks and troughs in demand, without either layoffs in recessionary periods or excessively long delivery times when demand

was high. However, the level of demand from a number of diverse markets during the past 18 months has already seen that policy undergo

change. TVR so far has responded to the higher demand, without new capital investment, by extending

the working week and increasing employment to about 130. Mr Stewart Halstead, managing director, said yesterday the company be-

lieved it could now push ahead with expansion without being excessively vulnerable in future downturns.

"The days of putting a ceiling on production are gone," he said. "In future, if a soundly based market indicates a production requirement of even 1,500 cars a year, then we would be prepared to do 1,500 cars."

The company has had so far unsuccessful negotiations with local authorities on a big new complex at Blackpool, and with French development authorities on a possible additional assembly plant in France.

TVR is also expanding its operations in the U.S., where its importer has moved its distribution centre from Jacksonville, Florida, to larger facilities at Milford, Connecticut.

The lease on the Jacksonville premises has been sold to another UK car concern, Panther Cars, which is in the process of setting up a U.S. network of 210 dealers by the autumn.

Mark Meredith in Edinburgh adds: Alfa Romeo, the Italian car manufacturer, is to supply engine parts and handle distribution of a new sports car to be produced this summer by AC Scotland, a Glasgow-based speciality automobile producer.

Mr David Macdonald, managing director of AC Scotland, said that, under a joint agreement, his company would buy in over £2m in parts from Alfa Romeo. In August the company plans to begin production of its new Ecosse series.

Financier attacked

BY OUR LAW COURTS CORRESPONDENT

MR ALEX HERBAGE, an international financier, was attacked by two men as he left the High Court in London yesterday.

An eyewitness said that the men "ran up and gave him a good beating before he went to the ground. They started to kick him while he was down but some men pulled them off."

The incident occurred after a private court hearing at which a judge lifted a court order preventing Mr Herbage removing any of his assets from the UK or dissipating assets in the UK. The order had been granted on

March 20 to Interconsult, a Dutch company which has lodged a £8.3m personal bankruptcy petition against Mr Herbage on behalf of more than 400 investors with claims against Mr Herbage's company, Caprimex. The petition is based on two judgments by a Rotterdam court against an Amsterdam-based Herbage company.

Caprimex, a Cayman Islands company, was compulsorily wound-up by the High Court last month when the court was told that claims exceeding £300m were being made against Mr Herbage and offshore funds companies associated with him.

Cutlery companies reap the rewards of cautious policies

AMBITIONOUS COMPANIES with relatively large investment and marketing programmes in the British cutlery industry have tended to fail in the past 10 years, while conservative, low-spending, family-run businesses have usually survived, a research report published today says.

"Decline and Survival in the UK Cutlery Industry," produced by the London Business School's Centre for Business Strategy, covers the business performance of 33 cutlery companies since 1974. A third of those companies have ceased production in Britain, although some of their brand names remain.

The report is not making a blanket statement that it is bad strategy to invest in new machinery or seek new markets.

"What we are saying is that business performance is not just a question of capital investment but also of management of the resources of a company," says Dr Roh Grant, the report's author.

"High cash spending increases a company's vulnerability where the company has limited resources and the profit margins are small. The value of the pound and the rise in interest rates from 1979 probably sent some companies, which had invested and which would have otherwise survived, to the wall."

One of the report's conclusions is that competitiveness would be improved by the industry taking collective action on promotion, quality standards and marketing, but that has been thwarted up to now by the "aggressive independence" of companies.

Another conclusion is that the scope for adjustment by small companies is particularly limited when facing high penetration by low-cost foreign producers.

The report covers only the period from 1974, since when the cutlery industry's employment has dropped from about 15,000 to 7,000 and output halved. Much of the industry's shrinkage actually occurred before 1974, under the weight of low-cost foreign producers, mainly in the Far East.

Of the four largest companies in 1974 three - Vins, Hawker Morris and Richards of Sheffield - went into receivership. Other failures or manufacturing plant closures included those of J. Bilton, Sheffield Metal, Old Hall and Mappin and Webb, although some of these continue as brand names.

Nick Garnett examines the reasons why some ambitious cutlery companies have failed and smaller more conservative ones have tended to prosper.

Mr Bryan Upton, managing director of Westall Richardson, a successful Sheffield kitchen knife maker, said the underlying problem was that companies in flatware (spoon and fork) manufacturing had not invested early enough in the 1960s and 1970s, when the Far East emerged and grew as a low-cost producer, and that some of the investment had been poor.

"I have seen flatware manufacturing so automated in Japan that people do not lay a hand on it during production. You cannot blame cheap labour in this case because Japanese labour rates are if anything slightly higher than here."

The London Business School report makes three points.

● On investment, it says that capital expenditure failed to improve profitability largely because falling sales prevented companies from utilising modern equipment at economic levels.

● The costs of brand promotion, and investment in department store concession shops, involved expenditure beyond the resources available to most firms.

● The small size of the high-quality cutlery market prevented up-market movement by cutlery firms as a method of improving performance.

The report singles out a few notable exceptions to such recent history, including Westall Richardson and Slack and Barlow, which makes silver-plated cutlery. These have combined profitability with strong sales growth, the report says.

It argues that the most profitable companies have been those that operated in market sectors where low-cost import penetration was poorly developed, achieved higher operating efficiency and limited expenditure on brand marketing and distribution.

The one particular exception to that is Westall Richardson, which operates in a market where import penetration from the Far East has been low, but which has managed to link expansion and aggressive marketing with manufacturing skills.

FLY THE LEADER.

One crew flies them all.

The Boeing new technology jetliners have one thing in common - the same flight deck crew can pilot every airplane. No special training required. No additional airline overhead. No crew scheduling problems.

A 757 crew can fly to one destination and

make their return flight at the controls of the 767-200. Then the next day take off on a 767-200ER flight of 5,900 miles that puts them on the other side of the world.

Think of the efficiencies. Think of the pleasure and pride it gives

your flight deck officers to fly such advanced technology jetliners.

With this kind of flexibility, your marketing people have a host of scheduling options as well.

This is the Boeing family at its best - all designed to help airlines to be more profitable.

BOEING
Creating people's imaginations.

Let's talk about...
MONEY

Funding the telecommunications of the future

In 1985, according to estimates, telecommunications Administrations around the world will spend about US\$80 billion on new equipment.

Some of that expenditure will be to replace obsolete or worn-out systems. Most of it will be to expand networks, or to add the advanced services which subscribers increasingly expect.

As new technology continually opens up new telecommunications opportunities, keeping up is an expensive business.

It's also a complex and difficult business. Modernizing and expanding networks cost-effectively takes all the experience and skill the telephone companies have been building up to over a century. Mistakes - as some countries have discovered - have very costly long-term effects.

Only profitable Administrations with resources in depth can handle the future of a country's vital telecommunications.

Here's how Ericsson can help

To help Administrations generate the profit necessary for investment in the network's future, Ericsson offers a unique three-part package.

A genuine 'total network' planning and supply capability.

The AXE switching system, which reduces present and future costs.

The ability to incorporate useful, income-building services into the system, easily and quickly.

Planning for profit...

Ericsson has the capability to make, supply and install total networks: transmission, switching, operation and maintenance, hardware and software.

Just as important, we have unrivalled network-planning skills and experience. To date, we've designed all or part of over 100 metropolitan networks, and provided the comprehensive training and long-term support essential to a healthy telecommunications system.

Ericsson maintains field support offices in dozens of countries around the world. And our engineers in Stockholm can simulate the operation of any AXE telephone exchange anywhere.

Cost-cutting flexibility

Ericsson's AXE exchange has been ordered by over 100 Administrations in 60 countries. A total of 1,200 exchanges are on order or installed.

These telephone exchanges may be local exchanges, transit exchanges, international or mobile, metropolitan or rural exchanges - all performing different functions in different ways. Astonishingly, with Ericsson's AXE system, the same basic hardware and software structure handles them all.

It makes a lot of financial sense when you consider the savings which a common system offers in terms of training, installation and operation and maintenance.

Income-building services

The bulk of an Administration's revenue will tend to come from large organizations and business subscribers. So the level of income will depend to a large extent on the range of services which can be offered to these subscribers.

AXE is designed as a functionally modular software system. Combined with this inherent adaptability is the fact that new applications are constantly being developed for AXE's world-wide markets.

The result is a ready availability of proven services, which can be incorporated into the system with minimum cost and inconvenience.

Most significant today is cellular mobile telephony. Ericsson is the world leader in this exciting growth area. Ericsson designed and constructed the world's largest cellular mobile network, and has over 440,000 mobile lines on order or installed in 15 countries. We know more than anyone about implementing practical, profitable mobile networks.

As a next step, telephone companies with AXE will be able to offer their subscribers an Integrated Services Digital Network (ISDN) - a single integrated network that can handle voice, data, text and image. In 1984, Ericsson demonstrated the ISDN in a commercial environment in Venice.

Keep in touch

If your work involves telecommunications, or if you simply have an interest in the subject, just complete the coupon below.

As well as our latest brochure, we'll send you a copy of the latest issue of *Connexion* - the Ericsson magazine which keeps you in touch with telecommunications developments.

ERICSSON

To: Telefonaktiebolaget LM Ericsson, Public Telecommunications Division, S-126 25 Stockholm, Sweden.

Please send me the latest issue of *Connexion*.

THE ARTS

Sculpture/William Packer

When art loses out to design

Sculpture in this country, against all likelihood, continues to flourish, though for how long is another question altogether and one that is given more urgency by the latest access of false economy within the Department of Education and Science.

Some of it is known well enough and certainly should not surprise us; since the false dawn of putative reform and encouragement in the early 1960s, our art schools have been consistently and cynically betrayed by every government. Meanwhile, we told you so—successive generations of our graduates in every one of the disciplines of design have been snapped up abroad to fuel our foreign competition, and now does the penny drop. Or does it? Has it fallen heads or tails? Peering down into the long past, our wise Masters read only the word Design and forget the Art inscribed deeply on the other side of the coin.

There is a need for the most insistent repetition: art and design are necessary complements, for art sets out the contract and conditions within which design may flourish; not just in terms of style or manner but in the fundamental habit of creative freedom and adventure and radical thought. In short, design without art cannot flourish as true design at all in any broader sense. So it is good indeed, in this season of graduation exhibitions everywhere, to bear the rector of the Royal College of Art (the standard-bearer of the Government's renewed new wave of young graduates, policy of commitment to education in design) nail this heresy of division by giving his own unequivocal support to the central position that fine art rightly occupies in the business of his own institution.

We can only hope he will be allowed to stand by his word, for there was no doubting his intention. But we live in cost-effective times when reaction is all and designers are seen to be the ones who get the jobs (albeit abroad) with artists a likely burden on the state. The measure of the Government's own commitment is that, yes, of course, industry and commerce must be encouraged to do all they can and more (though they have never done very much, in all conscience) to make use of this wealth of talent that our schools of art turn out year after year. And, yes, of course, the least directive is that those schools of art are to be squeezed by a further 23 per cent, with the departments of fine art to be given not even parity in this measure of deprivation.

Our treatment in this country of current visual art has usually

Michael Sandle's "Proposal for Euston Road No 2" (1985).

been negligent where it is not ignorant, and now it would appear to be stupidly self-defeating as well. The occasion of the rector's remarks was a dinner given by his sculpture school for as lively a batch of graduating students as one could hope for: Nicola Hicks, with her contribution to the Hayward Annual to bear in mind, outstanding with her mixed-media menagerie; Martin Ives, with his strange shaved-leaf tree trunks; Gina Martin and her magic groves and traps and totems; and Melvyn Rodger, with his elegantly resolved fragmentary assemblages. All are notable, but they must wait another turn; for the point here is not so much to celebrate yet another new wave of young British sculptors, excellent though it is, as to remark the extraordinary continuity of success.

Ever since the war, the new British sculpture (in its successive manifestations) has been the common-place of international interest and approbation. And is no accident at all, but a function of the same native creative energy and distinction, that such success in one of the principal fields of fine art activity should have marched over so many years with the success abroad of our applied design.

It so happens that three of the more distinguished and successful of our middle generation of sculptors are showing their recent work in London; and again it is no accident that they are hardly public figures, nor that one of them should now make his life abroad. Michael Sandle (at Fischer Fine Art until June 21) is the incumbent professor of sculpture at the Akademie der Bildenden Künste in Karlsruhe; and, more and more, his work seems to be rooted in the experience of his self-imposed exile, with all the shifts and nuances of memory and attitude and cultural predisposition that it entails.

Sandle is a wary observer and a dispassionate and somewhat black ironist, over preoccupied with the common experience and receding memory of World War II as seen from his unique position. The memorials he makes are oblique and ambiguous in their implication and allusion, dwelling not so much on the horror as on the implacable fact of war.

The more recent work is more abstract and general in its symbolism, though memorials still—to the victims of a helicopter crash in Mannheim; to George Orwell, a whole series of competition maquettes; and maquettes, too, for a nameless project in Euston Road, London, of the middle 20th century. It should also break the back of the appeal.

Aldeburgh has had its problems: the Maltings desecrated by fire; some unsuccessful artistic ventures—but now seems set fair. It is immensely cheap on the public purse, receiving only 14 per cent of the cost of the building, which was owned by the Council and local authorities (the cash from the former has been pegged at £42,000 for three years, while Suffolk has given more this year, perhaps in recognition of the £500,000 in income generated by the festival brings to the county). Sponsors, notably Jaguar, provide £70,000; the rest is box office.

What began as the local fancy of two musicians is now an international festival of strange charm. Much of what happens at Aldeburgh is familiar only to its fanatics: the Rostropovich Festival in August; the Proms in September—but the more the festival grows, the more worthwhile Aldeburgh seems.

redolent of receiving stations, satellite dishes and cosmic messages from outer space.

He is also showing a number of large and splendid new watercolours that are now bonded more freely than before, though as dense in imagery and full of foreboding as ever; images not now of submarine pens and bomber aircraft but of material dumps on fire, volcanoes blowing up, and a tank in flames with the black cross of the Wehrmacht on its side. But there is more to it all than particular mayhem, something less specific and limiting. For we may catch a whiff also in both sculpture and painting, of another age, a sense of something neoclassical in the formal disposition of the imagery and the monumental ambition, and a nobler, more Romanesque resignation. This is the stuff not of an immediate disaster but of the long aftermath and selective memory; not Hitler squalid in his bunker but Napoleon on St Helena and a grander, if flawed, ideal.

I shall not say too much of the other two artists. Barry Flanagan (at Waddington until June 22) and Richard Long (at Anthony d'Offay until June 29), other than to recommend them to you, for I have written about them several times before and at some length, and both their shows consolidate rather than challenge their established positions. Flanagan, especially, seems presently bound up with fey and teasing variation upon his animal familiars, his bare dancing upon the elephant's head; but his simpler pilgrim motif, linear symbol or badge more than actual image, is elegant and poetic development, however familiar the hoops it also must jump through.

Finally, a word on an admirable collaboration between two disparate institutions of higher education. The sculpture school at Kingston College of Art now has an arrangement by which the work of those associated with it is given regular exhibition space and time in the courtyard of the new buildings in Regent's Park.

This time the work is not in the open, but under the arcades: four primitive, somewhat Polynesian mask-like heads by David Mach, made of matchsticks that once were red and scorched by their firing; and four small bronze reliefs by Colin Nicholas, that might be strange trophies or votive objects for all that they are. The work is of a high quality, and the exhibition is well presented, but all in all, there might be hope for us yet.

Carol Farley and Boris Bakow.

Maggio musicale/Florence

William Weaver

Like its illustrious predecessors, the 45th Maggio musicale has a highly varied calendar, events great and small, solo recitals alternating with grand choral-symphonic concerts. But this, after all, is Italy; and inevitably the festival's opera productions attract the most attention. After the inaugural "Don Carlo" last month, the second opera on the programme (except for a single matinee performance of a Little Cherubini fantasia) was Alban Berg's "Lulu".

The Berg opera is not unfamiliar in Italy. Over the past decades there have been performances in all the major Italian houses, at regular intervals. But until last year, the opera was always heard in German, and without its third act. For the first performance in Italy of the three-act version, the Genoa opera commissioned an Italian translation from Federico d'Amico, who has produced excellent staging versions of a number of operas, ranging from Moussorgsky to Menotti. As he is at present the guest artistic director of the Maggio, it was logical for him to schedule another production of his "Lulu".

It was less logical, however, to engage an almost entirely non-Italian cast. As a result, "Lulu's" guest text was often unintelligible; or, when it was intelligible, the delivery was erratic, at times almost to the point of risibility. The effect was alienating. In the case of the Pr Schola, it was downright irritating, as Boris Bakow

garbled his words in a Slavic stew and sang in a hollow voice with a manner more suited to Gudonov than to Wedekind.

Besides her strong American accent, Carol Farley—the Lulu—had other problems, many of them created by the producer, Luigi Squarzina. He imposed a number of eccentric, awkward movements on his actress, forcing her to sprawl on the floor (and then, with no motivation, to stand up again), fling her legs in the air, mimic like a classic tart, bare her legs, and—time honoured gesture—kick off her shoes (and then, tidily, collect them again). The other interpreters fared no better: Squarzina's hands, but the lack of a central characterisation, a Lulu of mystery and allure and horror, created a gaping hole in the performance.

Lulu's Damiani's sets and costumes were handsome and, generally, appropriate; but the lighting was dreadfully inept. A character would enter, in shadow, and a spotlight would start searching for him, usually finding his knees first, then his face. In spite of all these drawbacks, the evening had redeeming features, notably the interpretation of some of the secondary roles: the eerie Schigolev of Andrea Földi, for example, and the affecting Geschwitz of the unforgettable Evelyn Lear. The Florence orchestra, too, was in splendid form, conducted with alert penetration by Bruno Bartoletti.

Voice and piano/Aldeburgh

Max Loppert

Peter Pears, senior figure of the Aldeburgh Festival, will be 75 on June 22. He is, of course, the most important and influential English tenor produced this century; and his artistry, though no longer expressed in the medium of song, is still perceived in every corner of festival planning. A "Birthday Choice" concert is timed to mark the exact occasion; and to a similar end, Faber has published a Festschrift (edited by Morion Topp, £14.95) in which admirers of the order of Janet Baker, Lord Harewood, Hans Kie, and Kostrovich and Vishnevskaya (in a particularly vivid joint tribute) attempt to recapture in words the sound and sense of Pears' singing.

The Sunday afternoon recital at Orford Church, subtitled "Voices of War" and given by John Shirley-Quirk and Stuart Bedford (piano), bore the fine Pears imprint. It was a carefully planned memorial to the artistic casualties of World War I—the composers and poets cut off before their prime or else damaged beyond recovery. The composers whose songs were given were (in the words of Pears' programme note) "not great composers but composers of promise who were not allowed to live long enough to show maturity." Sir Peter also intervened between musical items to read from Brooke, Owen, Sassoon and Hardy, in a manner of eloquent frailty that proved deeply moving.

Mr Shirley-Quirk's warmly patinated baritone and Mr Bedford's admirably sensitive accompaniment of it combined to produce a performance of the cycle on five Edward Thomas poems by Gurney. In Gurney's musical impressions, each one small of scale but deftly judged in every poetic

infection, the recital theme found its most substantial example.

A group of songs by Finzi, Farrar, Frederick Kelly and W. Denis Browne was of more desultory interest: Butterworth's Houseman cycle *Bravon* Bill kept too continuously to the rather mild, slow mode. It was also an instructive idea to place Frank Bridge's longish Piano Sonata (played by Philip Mead) as the concert centrepiece: a post-war work, it signalled the radical change in Bridge's musical language, for reasons easily understood in this context. But it seemed to me a work of prolonged confusion and crabbed clutter, hard to follow oven from antenae to antennae.

On Sunday evening at the Maltings, Mieczyslaw Horszowski gave an Aldeburgh recital for the third successive year. The celebrated pianist and pedagogue will be 93 on June 23. As the concert bore out, the miracle of his pianistic wisdom continues undimmed—the listener may be in danger of sentimentalising his great age before he arrives on the platform, but not once he sets his hands to the keys. The Beethoven Pastoral Sonata stretched out into an infinity of golden cadences, every marvellous subtlety of articulation may have been noted in the process. But the larger impression of distilled beneficence and serenity survived every detail. Boeb (the C minor Partita) and Mozart (K.570) shed a comparable glow: in the Chopin B minor Polonaise and B minor Scherzo, some of the bravura flourishes were skilfully dispatched, yet the spirit of the playing—eithereal, romantic, aristocratically brood—rendered the follibilities unimportant.

Bernstein's Mahler/Barbican

David Murray

On Sunday afternoon Leonard Bernstein made one of his rare visits to London, and brought the Amsterdam Concertgebouw Orchestra with him. The occasion was one of the weightiest components of the London Symphony's continuing Mahler Festival—a performance of Mahler's last completed symphony, the Ninth. Expectations were high, and they were magnificently fulfilled.

Bernstein's long love affair with Mahler's music has about as much matter of public record as such a thing can be. There is not only the natural sympathy of one composer-conductor for another, but a whole shared emotional range: candidly intense sentiment, violent revivals, mocking histrionics, a deep respect for the music and its modes, a lust for grand public expression.

So it was this time, and the Concertgebouw was in sumptuous form. A catalogue of the orchestral glories would be impossible for long. It would include unlikely things like the bassoon trio near the end of the Ländler movement, at once

comic and chilling, faultlessly balanced. Bernstein drew out the close of the final Adagio to extraordinary length (some performance, but entirely convincing and moving here), and even under that relentless exposure not a player wavered.

Bernstein began the Andante comodo slowly, almost painfully, as if the music had to collect itself with a weary effort. The momentum grew naturally, and later the desperate climaxes crashed and broke as only a thorough Mahlerian can make them do.

Only the Rondo-Burleske was fast, so swift as to lose some detail; within the outer sections, the necessary moments of lightning were achieved without varying the tempo by a note. Under that aching, unfolded on a majestic scale, with the Concertgebouw's own long experience of Mahler revealed in all the intricate cadenza-writing—not a phrase of such music, of course, Bernstein's embracing warmth carries everything before it.

Peter Lieberman/Radio 3

Andrew Clements

Peter Lieberman is a 30-year-old American, son of the distinguished record producer and conductor, Norman Lieberman. His music is hardly known in Britain, and on Thursday evening Radio 3's Music in Our Time was devoted to two of his works, introduced by Oliver Knussen.

Lieberman studied with Chores Wuorinen, and began his career as a committed serialist, as the earlier piece in the concert, the Concerto for Four Groups (1971), demonstrated. That seemed little that was identifiably personal about it; a slightly dry, densely argued eight minutes which clearly owed a good deal to the example of Milton Babbitt and organised on aerial premises. It is a big piece, some 40 minutes long, clearly conceived in the tradition of the symphonic concerto from Brahms onwards.

Piano Concerto, written in 1981 and 1982 for Peter Serkin, and played by him on the broadcast, with the Boston Symphony Orchestra conducted by Seiji Ozawa. In the mid-1970s, the composer temporarily abandoned composition to study Buddhism, and his music since he resumed seems to have gained a much wider emotional range, and a willingness to admit more rhetorical gestures.

The style of the concerto would I imagine be classified as neo-romantic: there are well-defined tonal centres, with the pitch F sharp playing the prominent role, though Knussen maintained that it was still organised on aerial premises. It is a big piece, some 40 minutes long, clearly conceived in the tradition of the symphonic concerto from Brahms onwards.

Blanca Uribe/Elizabeth Hall

Andrew Clements

Miss Uribe produced a most satisfying and consistently musical programme at the Elizabeth Hall on Friday evening. But the major weight came in the first half: two Beethoven sonatas, one of them the Hammerklavier, were followed by a Chopin group which, though it contained the F minor Fantasy and the C sharp minor Scherzo, inevitably seemed more relaxing.

I suspect it was not just the programming that brought the decrease in tension after the interval. For while there was very little miss in Miss Uribe's Chopin playing—in indeed, much of it was suavely elegant—neither was there an impression of original thought, of the works being approached with freshness and new ideas. In contrast, both Beethoven sonatas contained thoughtful and considered touches, even if not all of them were successfully realised.

Her performance of the Hammerklavier was let down

by the finale, which after a bracing beginning to the fugue began in the middle as rhythms lost their profiles. Miss Uribe has an impressively clean and fluent technique, though not without a quota of misshapen octaves, and the vital way in which she punched out the figures in the first movement gave it a refreshing buoyancy. It was by no means a self-consciously profound treatment but one which took each movement on its merits, and sustained even the Adagio in neatly rounded paragraphs.

The F flat sonata Op. 27 no. 1, compared very favourably with Pollini's account in the Festival Hall a few weeks ago, when contrasts were pushed too hard. Here, everything was highly civilised: a svelte scherzo, and finely judged transition to the finale, while the Adagio really did seem to be settling itself for a major climax. Hardly Beethoven red in tooth and claw, but rewarding nevertheless.

Auctioning Aldeburgh

Antony Thorncroft

But Aldeburgh is still looking for cash to achieve its film appeal to provide an assured income for the Aldeburgh Foundation, which runs intensive training courses for aspiring professional singers through the Britten-Pears School. More than £500,000 has already been raised; and on display at Aldeburgh this week is an exhibition that could raise a substantial slice of the next £500,000.

There has always been a visual arts fringe to the musical events; but this year there are seven exhibitions on offer, one of which is a worthwhile century through mainly 20th century art. It is of items donated to the Aldeburgh Appeal which is auctioning in London on October 8. At least £100,000 should be raised; perhaps much more.

Among the most generous givers has been Sir Peter Pears,

who has a very fine art collection (including works by Constable). He has donated a screen by Mary Potter, who lived in Aldeburgh and who was involved in a house swap with Britten and Pears; and a Rodin bronze, both of which could sell for more than £5,000 each, as well as works by Sickert, Lear, Gertler and Lucian Freud.

Eric Crozier has presented 100 letters from E. M. Forster, many about their collaboration on *Billy Budd*; Janet Baker a mother-of-pearl card case given to her by Pears; Peggy Ashcroft her portrait by Henry Lamb; and much more. A drive is underway to persuade museums involved with Aldeburgh to offer musical manuscripts and, by October, the auction should be a fascinating cross-section of a chunk of British cultural history

of the middle 20th century. It should also break the back of the appeal.

Aldeburgh has had its problems: the Maltings desecrated by fire; some unsuccessful artistic ventures—but now seems set fair. It is immensely cheap on the public purse, receiving only 14 per cent of the cost of the building, which was owned by the Council and local authorities (the cash from the former has been pegged at £42,000 for three years, while Suffolk has given more this year, perhaps in recognition of the £500,000 in income generated by the festival brings to the county). Sponsors, notably Jaguar, provide £70,000; the rest is box office.

What began as the local fancy of two musicians is now an international festival of strange charm. Much of what happens at Aldeburgh is familiar only to its fanatics: the Rostropovich Festival in August; the Proms in September—but the more the festival grows, the more worthwhile Aldeburgh seems.

Arts Guide

Music/Monday. Opera and Ballet/Tuesday. Theatre/Wednesday. Exhibitions/Thursday. A selective guide to all the Arts appears each Friday.

Opera and Ballet

PARIS

Anna Tereza de Kozmanská, the young Belgian soprano, continues her classical training with American-inspired post-modernism. Théâtre de la Ville (742277).
Mikaela's *Requiem*, co-produced by the TMO, Orchestre de Paris and the Teatro Ronconi-Valli de Regio Emilia, conducted by Sir Charles Mackerras/Nicholas Kraemer, produced by Pier Luigi Pini, the title role sung by Teresa Berganza/Ewa Podles. TMO-Chatelet (2534444).

WEST GERMANY

Berlin, Deutsche Oper: This week's highlight is *Travis* with Luciano Pavarotti and Raima Kabaivanska. Carmen, sung in French, features Julia Varady and Vladimir Atlantov. Tristan and Isolde is of respectable standard with Katerina Ligachova, Ewa Podles and Mariella Freni. Also Die kaiserliche Kuchentorte, sung in German, with Mariella Freni. Bayerische Staatsoper: La Bohème is steered to triumph by Mirilla Freni, Händel's *Heracles* in concert version is sung in English and conducted by Nicholas Kraemer. court. Manon Lescaut has again Mariella Freni. Further performances are The Magic Flute and Madame Butterfly. (21851).

LONDON

Royal Opera, Covent Garden: The 15-year old John Copley production of *Coat of Arms*, now rather faded, returns with an attractive and interesting cast (including Margaret

Price, Anne Howells, and Francisco Araiza, and Colin Davis as conductor. (240106).

English National Opera, Coliseum: *Aldeburgh*, one of the ENO's less distinguished attempts at Verdi grand opera, has at least an unfamiliar cast (including the Australian soprano Marilyn Richardson, making her London debut in the title role) to recommend it. Further performances of the company's bold, irritating, imaginative reworking of *Madame Butterfly*, and of *The Midsummer Marriage*, disappointingly insensitive in its production ideas but musically full of feeling for the radiant lyricism of Tippett's wonderful score. (3363181).

ITALY

Florence, Teatro Comunale (Maggio Musicale): *Lulu* by Alban Berg (in Italian), conducted by Bruno Bartoletti and directed by Luigi Squarzina, with scenery and costumes by Luciano Damiani. In the cast are Carol Farley, Evelyn Lear, Aracely Hingel, Boris Bakow and Richard Cowan. (Tue), (271929).

Venice, Grand Teatro La Fenice: The German choreographer/director Pina Bausch with her Wuppertal Tanztheater. (Wed and Thur), (26191).

Turin, Teatro Regio: *The Magic Flute* (sung in German) conducted by Mikko Elstelä and directed by Luciano Pavarotti. Lyons Theatre production. (Tue and Thur) (549000).

Palermo, Teatro Massimo (Politeama Garibaldi): *La Traviata*, conducted by Daniel Oren and directed by Mauro Bolognini with Diana Soviero and Nazareno Ambrogi (Tue),

Ballets Verdi-Requiem vittoria biagi (Fri, Sat, Sun), (564334).

NETHERLANDS

Amsterdam, RAI Congress Centre (Europaplein): The Lucia Childs Dance Company of New York. *Relativity*. Dance part 5 and Field Dance (Tue, Wed), (448551).
Amsterdam, Bellevue Theatre. Modern Canadian dance from the Groupe de la Place Royale (Wed, Thur), (247245).

VIENNA

Staatsoper: Richard Strauss's *Salome*; Die Walküre with Janowitz Bjonner, Fassbender, Lotte Ryseneck; Pfitzner's *Palestrina*; Madame Butterfly; Le Nozze de Figaro with Janowitz, Mathis, Hintermeier, (524263).
Volkstheater: Beggar Student conducted by Eibl; Mr Fair Lady conducted by Bauer-Thaues; Beggar's Opera conducted by Bauer-Thaues; Lehár's *Das Land des Lächelns*; Orff's *Die Kluge*; Die Schöne Galathea; Britten's *Beggar's Opera*; Lehár's *Count of Luxembourg*. (53242857).

NEW YORK

Metropolitan Opera: The 19th annual free park concert begins Tuesday with Adriana Malponte in the title role of Manon Lescaut, with Vasile Moldoveanu as Des Grieux, Pablo Elvira as Lescaut, and Arne Bernier as Des Grieux, conducted by Nello Santi (Great Lawn, Central Park). Richard Waiach conducts *Rigoletto* with Gwendolyn Bradley, Richard J. Clark and Enrico di Giuseppe in Saug Harbour, Staten Island (Wed), (26191).

For more information about our remarkable projects, write Gerry Van Os, European Marketing Centre, Cessna Aircraft Company, Brussels National Airport, P.B. Nr 2, Zaventem, Belgium. (Tel. 32/2/751.81.10, telex 846-22502.)

More haste, less radical

THE CABINET appears to be caught in the toils of its own would-be radicalism. Its most important proposal, the overhaul of social security, has been presented in an unfinished state, since the essential numbers which would give it colour as well as structure, are still in contention between the Treasury and the Departments of Social Security. The future of wages councils is still being hotly debated, while one clear break proposal, the decontrol of new private-sector tenancies, has been postponed sine die.

All these issues will remain contentious, whether in the end they are brought forward or shelved. Opposition threats to reverse those policies which they find most objectionable will at first inhibit the working of any changes that are enacted—as witness the reluctance of the life assurance industry to gear up for a pensions market which it fears may be snatched away. Where action is postponed, the Government risks fighting the next election under the suspicion of a "secret agenda" of measures thought too unpopular to offer at present, not to mention the suspicion of lacking the courage of its convictions. These are the dangers which beset any government, whether of the right or of the left, which allows a general impatience with the status quo to take the place of a clearly thought-out strategy.

Achievement

It is interesting to contrast these arguments with the steady progress of trade union reform under the present government, and the rapid progress of privatisation. The strategy is clear, popular support has been enlisted, and each step has been more or less carefully planned and assessed.

Here the cumulative achievement is large, and still growing; and what is more striking, the Government really does seem to have achieved Mrs Thatcher's aim of shifting the centre ground of the policy debate. Not even Labour any longer talks of reversing the steps which have been taken to make trade unions more representative, or of knee-jerk renationalisation.

Sanctions against South Africa

AS THE U.S. moves closer to selective economic sanctions against South Africa both President Reagan and Mrs Thatcher face a quandary. For the former the mounting pressure from Congress suggests that his policy of "constructive engagement" with Pretoria has not satisfied his own electorate and that he is driven to use stick rather than carrot.

For Mrs Thatcher, who has endorsed the President's policy and set her face against sanctions, there is the embarrassing prospect that the very articulation of the policy will have to shift its stance, leaving the UK almost isolated in Europe where France and the Scandinavian countries are adopting an increasingly tough position—and in the Commonwealth.

Veto unlikely

It now looks more and more likely that President Reagan will have to respond to the mounting pressure from Congress to the South African Government, as well as new investment in the republic, imports of Krugers, and sales of computers and nuclear fuel, equipment and technology.

The strength of political feeling is clear: the vote in the House of Representatives for this particular set of measures was 295 to 127 while the Republican-dominated Senate foreign relations committee approved a similar Bill by 16 votes to one. With that degree of bipartisan support and the growing strength of the sanctions lobby in cities, campuses and church groups across the U.S., a presidential veto seems unlikely when and if the House and Senate present an agreed version of the Bill to Mr Reagan.

The irony is that more reform in South Africa, however obvious its shortcomings, has taken place in the past two decades than in the past two decades, ranging from an end to the ban on inter-racial marriage to greater residential rights for urban blacks. But it has been overshadowed by a series of South African Government actions which demonstrate at the very least, appalling misjudgment and insensitivity to their impact on Western voters.

In Langa, last March, 19 blacks died when police opened fire on mourners marching to a funeral. Top leaders

of the United Democratic Front (UDF) currently face treason charges, leaving the government without a channel of communication to the country's black majority. In Namibia, Pretoria appears set on pursuing an "internal settlement" despite the West's pleas.

The most recent example could not have been better designed to infuriate Washington. Barely a fortnight after public ceremony marking the withdrawal of South African troops from Angolan territory—a welcome development in which the U.S. played a key mediating role—a South African sabotage squad was found close to an American-operated oil installation in the Cabinda enclave.

Economic sanctions are not the best way to bring about change in South Africa. Black opinion in South Africa is divided over their merits. They can be perverse in their consequences—witness the South African arms industry which now sells arms across the Third World. They could damage the economies of neighbouring black states, all of which are vulnerable to retaliatory action by Pretoria. Above all they will fall upon a society in which change seems to be unfolding at a pace and in ways which are beyond that society's control.

Yet South Africa's more imaginative politicians and diplomats cannot be surprised, after such a catalogue of blunders, that Western opinion finds it hard to accept the constructive approach and that the sound case against sanctions acquires the taint of appeasement and amoral self-interest.

The British Government's response to the possibility of selective U.S. sanctions should be to push vigorously for a joint European stance on South Africa. This should do more than jointly express the desire for changes in South Africa, which have long been expressed separately—the scrapping of laws and influx control, the granting of citizenship to blacks, and progress towards a constitution giving them a say in central government.

It should warn, as the French are doing, that Europe will have little choice but to follow the U.S. down the sanctions path unless there are substantial changes in the South African system.

SIR PETER WALTERS, chairman of British Petroleum, was in Hong Kong last week attending the International Monetary Conference—an exclusive event to which only bankers are usually invited.

But Sir Peter had a special claim to be there: apart from being a big banking customer, BP is now in the banking business itself. In January it launched its own in-house bank, initially to handle the huge group's finances but maybe later on to offer banking services to outsiders as well.

If the bank evolves as planned, its balance sheet will consist of virtually the entire financial assets of BP, over £10bn, which would put it among the 100 largest banks in the world, and create a formidable competitor to established banking institutions.

The apparent novelty of BP's move was reinforced in April when Volvo, the Swedish car manufacturer, also unveiled plans for an in-house bank that would rank among the largest financial institutions in Sweden, and again challenge the borders of the conventional banking business.

Despite the publicity both companies received, neither was actually breaking new ground. ICI, Dow Chemical and even the Co-operative Wholesale Society have nurtured banks which evolved over time to stand on their own feet. And coming as BP and Volvo did in the wake of the near collapse of one of the most notorious industrial company-owned banks of all, Johnson Matthey Bankers, they could also have been better timed.

Nonetheless, the initiative by these companies indicates two things: the close resemblance that the treasury departments of large multinationals have to banks these days, and the attraction of the financial services market as an extra profit-making outlet for an industrial company's financial strength and skills, which can be considerable. Both Volvo and BP have huge cash resources and turn over billions of dollars in the foreign exchange markets each year, all of it needing tight co-ordination to avoid waste.

Most large companies are already in the banking business to some extent, particularly if they are active in the \$250bn U.S. commercial paper market, which is where corporate treasurers trade their IOUs directly, without going through banks. Some people believe that companies will also start trading directly in other financial instruments normally handled by banks, like interest rate and currency swaps, and options.

Whether a company needs to go the extra step and set up a bank with its own capital and staff depends on other considerations. And many financially strong companies have chosen not to get too deeply involved in the esoteric and highly regulated world of banking.

Most large U.S. corporations, for example, have turned themselves to finance subsidiaries, like General Motors Acceptance Corp or General Electric Credit Corp whose main function is to raise finance in the markets for their parent's loans and handle their banking relationships or deal in foreign exchange.

General Electric Co of the UK, an obvious candidate with its £2.6bn cash mountain, has chosen to plough some of its surplus resources into new

BP goes into the banking business

When a company turns into a bank as well...

David Lascelles reports on the implications of multinationals managing their own finances

companies. Instead, last month it launched GEC Finance as an investment vehicle, though a move into banking services later on has not been ruled out.

An important motive for creating a bank is the expectation that a well-defined banking operation with its own staff and profitability targets will yield something extra.

The classic example is Dow Chemical, the Swiss bank set up in 1965 by Dow Chemical of the U.S. to handle the \$23m it had accumulated in overseas earnings and peddle some of its international financial expertise. Twenty years later after some ups and downs, Dow still owns 75 per cent of the bank. But it has matured into an extensive international banking network under a new subsidiary established last year, Dow Financial Services, which also owns 52 per cent of Dow Scandia and is about to participate in the City revolution through its stake in Arbuthnot Levent, the merchant bank and Savory Milin, the London stockbroker.

What started as an in-house bank has become, for Dow, a diversification into financial services from which it now reaps dividends.

At BP, the idea of a bank had been under consideration for some time. The group has an annual cash flow of \$40bn, a huge exposure to foreign currencies, and liquid assets of some £2.6bn. According to Mr Robert Horton, the managing director for finance and planning, "organisational cleanliness" was an important motive, though that only became possible when new technology permitted the group's entire

finances to be gathered on a single electronic screen 18 months ago.

"It was a question of how to manage our finances creatively and not just sit on an increasing pile of cash."

Mr John Browne, the chief executive of BP Finance International, as the new bank is called, stresses that all the functions grouped in BFFI were in BP before. "The difference is that we don't just pass the business through any more. We have a group that is accountable for making a profit

'It was a question of how to manage our finances creatively and not just sit on an increasing pile of cash'

out of that business."

BFFI has four parts: a treasury responsible for BP's money and foreign exchange trading, and its bank accounts; a corporate finance section which handles activities in the debt and equity markets, and other merchant banking-type work like mergers and acquisitions, and project funding; commercial banking which looks after relations with banks and investors; and a planning and systems group to take the long view.

Many multinationals already do this, of course. But BP has gone a stage further by setting BFFI up like a bank with its

Michael Daly

own capital base and accounts, a board of directors and a staff of about 70, some recruited from banks in the City. The group has also marched boldly into the investment banking area by handling three takeover bids on behalf of BP (one of which was unsuccessful) and four Euromarket issues in as many months, and it has clearly been shaped with more than half an eye on the City revolution and the new opportunities for a securities business which that presents.

But BFFI is not a corporate

balance sheet of £1.3bn, is less ambitious than BP's. Its main tasks are to act as a central clearing house for the group's finances, deal on the UK and foreign exchange markets, and factor the receivables of other parts of the group (that is buy the debts of ICI's trading divisions at a discount, and collect them).

The key point about in-house banks, though, is that they should deal at arm's length with their parents and charge commercial rates. Both BFFI and ICI are supposed to compete against outside banks for their group's financial business, though in practice that is not always possible. (BFFI does not charge in cases where a BP group cannot do business outside). As ICI according to Mr Trevor Harrison, a director of ICI, "there is an unwritten law that ICI divisions buy within the group."

But commercial principles must apply if the in-house bank is to generate real profits of its own rather than simply collect a surplus that would appear elsewhere in the group anyway.

During the planning for BFFI according to Mr Browne, BP discovered that its treasury operation was very undergeared by banking standards: nearly 50p of capital for every £1 on the books. That has been cut right back to 7p per £1, giving BFFI much greater profit leverage and enabling it to aim for a return on total assets of 1 per cent, more than most banks can manage. (BFFI has set itself as a model one of the few major banks that can. Morgan Guaranty of New York).

But steady profit growth is

not something the ICI has found easy. In 1982, pre-tax profits were £14.5m. They soared to £131.6m in 1983 and then plunged again to £88m last year, largely because the company was absorbing the shocks of the wide fluctuations of the foreign exchange markets on behalf of the whole ICI group.

A moral about the dangers of excessive profit expectations and the need for tight and expert control of in-house banks lies in the Johnson Matthey Bankers saga. The bank was part of the Johnson Matthey precious metals group and existed principally to handle gold transactions. But after the collapse of the gold market in 1980, it was encouraged to seek new life in business outside the group—which it did with disastrous results. The directors of the parent knew little about banking and were unaware that their bank's impressively good profits came from highly questionable loans.

Although neither ICI nor BP need a banking licence since they do not take deposits from the public, they keep in touch with the Bank of England, which is understandably a little nervous about the good-looking banks within non-financial groups, and they operate a careful system of controls.

If any of these companies were to branch out into the banking business proper, they would have to satisfy the Bank that they had adequate financial resources to do it, and the management skills.

But Mr Harrison says ICI has no wish to involve itself in a highly regulated industry. BP is "agnostic" about the value of diversifying into the finance industry, according to Mr Horton. However, a decision on whether to start offering banking services to outsiders will be taken once BFFI is properly established, probably next autumn.

The impact of such a move would be considerable. Apart from lending to other corporate divisions and dealing in the markets, BP could be offering companies advice on takeovers, arranging their financing in the capital markets and, at the retail level, running credit schemes at the petrol pump.

However, BP is keen to dispel ideas that it poses a threat to other banks. It only wants to guard its relationships with them and ensure that they continue to supply it with bright ideas. "It's not in our interests to destroy our banking relationships or damage the banking system," said Mr Horton. "We view this as a way of strengthening ourselves to take on our real competitors, who are Shell and Exxon."

Other companies will doubtless be watching BP carefully. But it does not seem likely that large multi-national corporations will be a rush of new in-house banks. The basic necessities of BP's—its treasury, management and market operations—la a formalisation of what most multinationals do informally already. And few will want to go to the next stage of marketing their financial expertise to others.

But multinationals are acquiring banking skills by sheer necessity. And if there is a threat to established banks, it may already exist in multinationals' ability to read and deal in markets, make their own corporate finance decisions and even price their own securities issues by themselves without even drawing attention to it with a banking label.

Davy's First Lord

For Earl Jellicoe, it is just another flagship.

The man who was First Lord of the Admiralty in 1963-64 is now to become the first lord of Davy Corporation. Davy is the leading UK process plant contractor that was saved by the Monopolies Commission from a protracted fight in 1981 on the grounds that it was a national "flagship" for exports.

Jellicoe, 65, takes over from Peter Benson, 68, the former chairman of APV, another process plant group, who was brought out of retirement in 1982 to make some major repairs to Davy. At the time the group was flailing badly as a result of a dearth of new contracts and a heavy loss.

Now, however, things are looking brighter and, in choosing their new chairman, the Davy directors clearly felt it was time to put out the flag again. "We were looking for someone rather different from me," Benson told me. "It will be a great thing to have someone who can talk to anyone, and an ambassador for Davy at the highest level."

Jellicoe appears to fit that description very well. A godson of King George V and a page at the 1937 coronation of George VI, he has always moved easily in the highest circles. Unfortunately for him, he also moved for a while in some earthy ones as well and spoiled a promising political career in the early 1970s.

But he rebounded quickly in the business world. He is chairman of the British Overseas Trade Board and a director of Tate & Lyle, Smiths Industries, Morgan Crucible and Sotheby. Jellicoe's presence on the board of S. G. Warburg may be helpful to Davy as well. The group's shares have been weak in the past three years, and there have been frequent bid rumours. Last March, Trafalgar House revealed it had built up a 5.5 per cent stake, and Davy could not hide behind the flag again.

While Jellicoe is out selling Davy to the world, the business

Men and Matters

Lord Beaverbrook of New Brunswick and Roy Thomson is now back in The Street.

Side tracked

The good citizens of Bonn have suffered a crisis of confidence for years. The place is, after all, the capital of Europe's richest nation but it is so small (pop. 282,000), the useful local joke goes that they fold away the sidewalks at night.

Nothing, not even the millions the state spends on bringing expensive opera, music and ballet to Bonn, mitigates the fact that compared to the British, French and Italians the Germans have a very boring little capital. MPs, forced to migrate there from the bright lights of Hamburg and Munich when the Bundestag is sitting, flee home at every possible opportunity. "The only good thing about Bonn," says agriculture minister, Ignatz Kiechle, "is the train to Munich."

Indeed, the most tangible sign of the town's importance is the fact that up to 400 trains a day pass through it. Through the middle, that is, of some of the capital's most prestigious quarters. For years, Bonners have complained about the noise and the inconvenience at level crossings, where traffic often stands still for 20 minutes.

But the local council is now up in arms about proposals from the Bundesbahn to bypass Bonn with its new 300 km/h trains linking Cologne and the Ruhr with Frankfurt—a move which would leave the capital's 100-year-old Italianesque station as little more than a provincial siding.

Probably the only hope the council has of persuading the government to bring the line through the capital would be to persuade MPs and ministers that it would offer them an even quicker way out of the place.

Insider dealing

Whoever said that stone walls do not a prison make was probably right. Mail order organisations in the U.S. are discovering this to their cost. It seems that the companies are losing out on orders placed by inmates of prisons, who under benign regimes do not need to name the jail with the return address and have the right to unrestricted phone calls and unmonitored mail. So they can order merchandise and charge it to money credit card numbers.

To the rescue comes Larry Schwartz, a member of a Florida company called the Fraud and Theft Information Bureau, who has compiled an unusual new business book—the Directory of Federal and State Prison Addresses and Zip Codes. It will enable mail order people to screen addresses and block orders from behind the wall. The cost is \$39 for the book version, \$330 for a computer disc and \$595 for a tape. And worth every cent according to Schwartz, who loses to direct marketers on prison sales in the tens of millions of dollars.

Bondsmen

I do not know what it has done for our film critic, but the latest James Bond film, A View to Kill, is working wonders for the popular image of the FT reporter.

Roger Moore, as Bond, introduces himself on five occasions during the film as "reporting for the London Financial Times" on Silicon Valley where much of the action is set.

Letters to the Editor

British monetary policy

From Mr J. Dow
Sir,—You note (June 5) that British monetary policy is in a state of transition, and comment on unsatisfactory features of where we are now. You offer, however, little guide to where we should now go—a subject, since the debate is confused, well worth discussing.

You attack over-funding. "It was invented (you say) to enable the authorities to pursue monetary control without changing interest rates, which is a travesty of monetarism." It might be better described as broad-money monetarism carried to its logical conclusion.

The policy of controlling the growth of broad money by raising short-term interest rates through the Bank of England's operations in the money markets proved ineffective because: (a) a change in relative interest rates is required to induce both holders of broad money to move from non-monetary financial assets, and borrowers to move from borrowing from banks to borrowing in other ways, such as equities or debt. (To reduce the stock of broad money, both types of broad money have to take place); and (b) though directed at short rates, such official operations tend to raise the whole yield curve, and so have little effect in increasing the relative cost of bank borrowing, and clearly not enough to induce financial directors to pay off bank debt by raising finance on the Stock Exchange.

Over-funding accomplishes half that process. It does not make companies fund bank debt; the authorities in effect do it for them. But it is effective in controlling broad money—the public is induced to move from holding broad money to holding public debt (even if only national savings instruments). It may well be the only effective way of controlling broad money—short of lending controls or the Corset, which understandably you also do not like.

To reject over-funding is perhaps thus to say that one cannot work out a desirable target for broad money; that bank lending

is an efficient means of channeling financial flows; and that the market should be left to determine the size of broad money without official interference.

You say that broad money was always intended as a signal for fiscal policy rather than for monetary policy. I doubt, if that is historically correct, nor, if it were, would the rule for fiscal policy be entirely clear. But, in any case, where does that leave monetary policy? There would seem two alternatives.

First, one could go for a narrower monetary aggregate. This might be M1, for a proportion of it is still non-interest-bearing; and changes in interest rates do seem likely to be effective in inducing a move from holding non-interest-bearing money (many forms of current account) into other financial assets (in practice, mostly into interest-bearing bank accounts). That, admittedly, would hardly affect bank lending; but, if one abandons a broad-money target, one implicitly leaves that aside. M0 (mostly the public's holding of notes and coins) is hardly a suitable target, since it is very dubiously, if at all, sensitive to interest rates. It is true it has recently been growing relatively slowly, probably a result of innovations that have been improving the relative attraction of bank (and building society) accounts; but that does not make it controllable.

The second approach would be to make the exchange rate a more explicit target for monetary policy. That is not the same as, and would not necessarily imply, adherence to the European Monetary System exchange rate arrangements. This course would only be sensible if one believed it had independent advantages more substantial than merely finding an object for monetary policy. There are a number of arguments for this approach. These I will not enumerate here, my concern being merely to sort out the options for monetary policy.

J. C. R. Dow,
Reform Club,
104, Pall Mall, SW1.

Stock Exchange reform

From Mr A. G. McIvor

Sir,—The circumlocutory nature of Sir Nicholas Goodson's reported response (June 6) to the loss of the second resolution does little to penetrate the fog that has surrounded the issue of reform for too long. Indeed the whole campaign has been notable more for the flamboyance of the views expressed both privately and publicly than for their contribution toward clarity.

The plain fact is that, as the voting shows, there are no Luddites in the Stock Exchange. None of us is implacably opposed to change and most of us positively welcome the essential influx of new capital and new trading facilities. Of course we have reservations about a number of peripheral factors, particularly, for example, about the conduct of interests inherent in dual capacity. (The Lloyd's can of worms is alone enough to justify the grave misgivings that so many of us share.)

But it is quite wrong for the media to suggest that the protesting element among the membership represents just a bunch of economic illiterates intent on keeping the 21st Century out of our affairs. It is equally wrong for Sir Nicholas to say that the opportunity has been lost to reform

the constitution. That opportunity is still there. It is merely a matter of the council—with its due obedience to the Bank of England—arriving at a sensible settlement with the membership. And if we need a new council and some new thinking to achieve that end, so be it.

The sensible settlement that I envisage is one which adequately recognises that we, as individuals, own the residual equity of the Stock Exchange and the valuable right to a continuity of business albeit in conditions of greater competition. The loss of the second resolution is a plain enough expression that the council's proposals in this area fell woefully short. Please let nobody accuse me of being motivated by greed nor of trying to capitalise on my good fortune in having become a member "on the cheap."

I simply cannot swallow the council's proposition that I should not only help a man set up shop in direct competition with myself by giving him some of my assets for nothing, that I should pay part of his rent as I do so—and finally—that I should pay the tab when he goes bust!

Nodding donkeys in Dorset

From Mr E. Potts

Sir,—It is interesting to note that oil companies are confident that substantial reserves of cheap oil lie beneath Poole Harbour and the hinterland of Dorset and Dorset.

We are reliably informed (over recent months) by many of your staff writers in erudite articles that the focus of wealth creation has now moved to this area of England.

May I ask why the residents of Dorset should be the subject of the proximity of low cost energy? If any of them studied economics at University they would surely recognise the bounty of nature in providing this scarce resource to hand. It is obviously vital to the increasing prosperity of the area.

Moreover, it may serve to remind many so-called wealth creators in the UK who may reside in the area and travel up to London each day that there may be certain costs attached to economic development.

As I write I am aware of the huge machines being set to work by Durham County Council to excavate the agricultural and forested purposes of an immense spoil heap from a post industrial sres close to my home.

I anticipate with some pleasure returning in future years from a Continental holiday through a north coast port and setting off for the north along a three-lane motorway. One will be able to observe the ceaseless activity of drillers, nodding donkeys, the gas combustion flares and all the paraphernalia of oil and gas recovery. There will be orders for pumps, valves, compressors and the great manufacturing areas of the north will benefit!

One even looks forward to trying a pint of Bathsheba Brewery's best bitter with the local routeabouts!

Eric Potts,
13 High Street,
Bishop Middleham,
Ferryhill, Co. Durham.

The mysterious Al-Fayeds

From Mr J. Rags-Burgess

Sir,—The vulnerability of the House of Fraser to a bid from a third party was openly acknowledged ever since the referral of the original Lomro bid to the Monopolies Commission. Then came the Al-Fayeds with their £15m offer. This was higher than anybody else was obviously prepared to pay. Why, therefore, should the Al-Fayed bid have been regarded as Campbell Smith says (May 31) as dramatic or outrageous?

In the final analysis the only question a House of Fraser shareholder had to ask himself was whether the price was right. Shareholders are after all, the proprietors of the company. Of what possible interest or consequence is it to them where the Al-Fayeds obtained the money for the bid, or whose money it actually was just so long as the price was right and the money paid over?

The most respected merchant banks in the City are of comparatively recent origin; the founders just as obscure and enigmatic as that of the Al-Fayeds. Harrods is, in a sense, a national institution. But it is hardly a national institution as to whether the new owners are of foreign extraction or are of uncertain origin or means. There are many examples in different industries where ostensibly "British" household names are in fact foreign controlled.

Surely two fundamental principles of our property-owning democracy are a respect for individual privacy and a recognition of individual rights in property. Mr Campbell-Smith's article grossly violates both of these principles.

Subcontinental nuclear field

From the Minister (Information)

Sir,—I refer to Mr Alain Cass's article and Mr John Elliott's report from New Delhi (June 6) in which Pakistan's nuclear programme and India's apprehensions are mentioned.

The Prime Minister and the Government of Pakistan have repeatedly and most categorically declared that Pakistan will not make nuclear weapons and that the nuclear fuel we produce in a small quantity is not weapon-grade.

India has made tremendous advances in the nuclear field since 1947-48. It exploded in 1974 an atomic bomb, euphemistically called a nuclear

device. Pakistan has never carried out any such nuclear explosion nor is it preparing to do so. New Delhi's allegation that Pakistan is making an atomic bomb or has already made one is baseless.

Pakistan has offered to India a nuclear inspection of each other's nuclear facilities. It is prepared to sign the NPT if India also does so. Pakistan has been for years piloting resolutions in the UN General Assembly for making South Asia a nuclear-weapon-free zone. Our nuclear programme is on a very modest scale and it is for peaceful purposes only.

35 Loundes Square, SW1.

President de la Madrid in Europe

Sober message from Mexico

By Robert Graham and David Gardner

Mexico's President

makes clear that

the debt crisis is

not yet 'overcome'?

During his visit,

he seeks more

European investment

to offset dependence

on the U.S.

STATE VISITS are essentially ceremonial and symbolic occasions. Within these limitations President Miguel de la Madrid of Mexico is determined to make the most of a five-nation tour of Europe which brings him to Britain today.

He comes bearing the flag of a country that still desperately needs the support and understanding of the industrialised world to tackle its \$96bn foreign debt. He wants to rid his hosts in Britain, Belgium, France, Spain and West Germany of any illusion that Mexico has solved its debt crisis.

President de la Madrid says emphatically: "We are far from being able to claim that the crisis is overcome. Even if we now have a greater margin of manoeuvre as a result of our debt restructuring (of \$49bn in March), this relief is by no means a definitive solution."

The soberness of his message contrasts starkly with the flamboyant tone of foreign trips made by his predecessor, President Jose Lopez Portillo, who revelled in Mexico's oil wealth.

Sr de la Madrid comes from the same political establishment, the semi-official Partido Revolucionario Institucional (PRI). But not only is he presiding over an economic crisis rather than a boom, his personality is wholly different. To offset the damage done to the presidency by Sr Lopez Portillo's profligacy, Sr de la Madrid, a Harvard-educated technocrat, has consciously gone out of his way to be almost self-effacing.

Since taking office in December 1982 he has been wholly absorbed in the economic crisis—tidying up the debris of an all-planned bank nationalisation, instilling budgetary discipline, rooting out ingrained corruption and trying to preserve social stability at a time of declining incomes.

Mexico conducts two-thirds of its trade with the U.S.; but Europe is seen as an important politico-economic balancing factor. President de la Madrid would like to see more European investment in Mexico both per se, and to offset dependence on the U.S.

He explains the drive for foreign investment as follows: "It is vital to increase foreign exchange earnings from the sale of goods and services in the coming years because we

can foresee Mexico not enjoying the same exceptionally high level of oil receipts which we had in the past. At the same time Mexico cannot expect to tap large amounts of external finance, since our existing debt is high and its service is one of the principal constraints on the economy. Thus we have to make a big effort to raise non-oil exports and of course earnings from tourism."

Last year foreign investment totalled \$1.6bn, a sharp increase on the previous three years. Nevertheless, foreign investors are at times confused by a combination of Mexican nationalism and the vagueness of existing regulations. The President admits: "Historically we have sought to ensure basic control so that the Mexican economy is in Mexican hands."

Foreign investment represents no more than 12 per cent of total investment in the country. But he says: "Even with this nationalistic policy, the possibilities for foreign investment have been, and continue to be, substantial."

Sr de la Madrid is particularly anxious to attract foreign investment with a significant transfer of technology. It seems likely, for example, that the recent difficulties of IBM in establishing a new wholly-owned subsidiary in Mexico for microcomputers will be resolved. The President cannot say so directly, but behind the nationalism lies a strong dose of pragmatism.

Despite friction with the U.S. over issues that range from protectionism to narcotics, President de la Madrid takes a philosophical view. "Just as our collaboration has increased so has the potential for conflict."

Against these negative aspects, Sr de la Madrid emphasises that "the economy showed a notable capacity to recover with growth reaching 3.5 per cent last year instead of the 1 per cent planned, and

with private investment increasing almost nine points after stagnating in the previous two years."

President de la Madrid is concerned by the trend in oil prices since oil provides \$16bn of the country's \$23bn exports, but he believes Mexico has the capacity to react and recover. A vital element here, he acknowledges, has been the backing of the PRI-controlled trade unions that have accepted a stricter wages ceiling. Adjustments need to be made in the economy, especially an acceleration in the sliding devaluation of the peso. These are expected after the congressional and state governor elections next month.

The elections come at the halfway stage in President de la Madrid's administration and will determine the strength of his government for the remaining three years. His critics feel he has allowed the recovery to begin too early solely to offset popular unrest in advance of the elections. He is also accused of having done too little to root out corruption and generate structural reforms.

Sr de la Madrid obviously agonised over what to do about his predecessor. "In the first few months of the Government received a number of claims implicating the former President. The Attorney-General investigated these allegations (of corruption and abuse of office) but found no evidence to implicate him and so no action was taken."

The matter is now dead but all eyes are on the Government to see how it permits the PRI to control next month's elections. The President rejects opposition claims that the results are already being fixed. "I am concerned that certain political parties are already raising the fear or their belief that there will be electoral fraud. I don't think this is the best way to get people to vote. It seems perhaps a strategy to explain their defeat in advance."

In Mexico everybody knows the PRI's history of vote fixing, "alchemy," as it is known. But if large-scale fraud is employed, this will reflect on Sr de la Madrid's democratic legitimacy and undo much of his hard work in cleaning up the presidency's image. It will also make tough economic decisions much harder.

An international outlook

From the Secretary General,
The Uranium Institute

Sir,—I was surprised to read (June 4) that the name of the Uranium Institute had been changed to the Uranium and Plutonium Institute. I can only assume that something has gone wrong with the sub-editing. The error is perhaps understandable, since we are interested in the whole range of nuclear fuel activities, and our international membership—which is corporate rather than personal—covers the entire spectrum from uranium mining to fuel preparation, its use in reactors, and its eventual reprocessing, storage or disposal. As the article correctly states, 60 organisations, most of them major entities, are members. One third are public sector bodies.

The article also appeared to imply that anti-trust considerations are a factor inhibiting U.S. membership. This I am glad to say is not the case. Since 1979 the Institute has held a business review letter from the U.S. Justice Department, which in effect endorses our procedures and anti-trust safeguards. These were most carefully set up with advice from

U.S. and European legal counsel, and have stood the tests both of time, and of many detailed examinations by the lawyers of companies intending to become members.

It is nevertheless true that the U.S. has been slow to join this international organisation, where 18 nations plus the European Community are represented already; but that has been mainly due to the fact that America is a huge country with a high degree of nuclear self-sufficiency, and, until recently, minimal incentives to join an international organisation whose main "cement" is the extensive international trade in nuclear fuel. The uneconomic nature of much of the U.S. uranium mining industry, however, compared with the cheaper production now available elsewhere, is having the effect of forcing the U.S. to look offshore, and to begin to take part in this world trade. As a result the Institute now has three U.S. members, and a number of other expressions of interest have recently been received.

Terence Price,
Twelfth Floor,
65 Knightsbridge, SW1.

Possibility of higher rates

From the Conservative
Spokesman, General Purposes
Committee,
Birmingham District Council

Sir,—The subject of parish councils is hardly likely to set hearts fluttering or cause demonstrations in the streets, but what is happening in Birmingham could be the most costly extravagance since the Greater London Council and West Midlands County Councils were established.

The Labour city council has proposed to the Local Government Boundary Commission that the whole of the city should be parishised. This entails the establishment in each parish of a council, with staff and officers and powers to acquire land, provide community halls, conference facilities, car parks, litter bins, encourage tourism and so on and so on. What is not generally known is that these councils can levy rate without any financial limit. They will merely precept the city council who will have no powers under present legislation to challenge the expenditure which will be passed on to the ratepayers of that parish via the city's rate demand.

The Boundary Commission has already suggested the establishment of 13 parishes for the

city based on the views of about two dozen favourable responses and if such parishes are established in Birmingham they could be the forerunners for other major cities with disastrous financial consequences. The Government has fought long and hard battles in its plan to abolish the GLC and Metropolitan County Councils while a "slumbering whale" is waiting to replace this tier of local government with yet another.

Birmingham has a long and sound reputation for wise local government. I should be allowed to continue without the imposition of parish councils which are inconsistent with a major urban environment and above all, for which there appears little or no public demand.

I urge all ratepayers to consider the consequences of doing nothing. The expenditure of a parish council will be charged to the ratepayers of that parish—domestic and commercial. Business ratepayers will find themselves paying even higher rates and will find it impossible to challenge the cost however unjustified it may appear. (Councillor) Bernard Zissman,
91 Fitzroy Avenue,
Harborne, Birmingham.

Definition of capacity

From Mr E. Cornwie

Sir,—How refreshing to read the sense of Sir Ian Morrow's letter (June 4), which throws light on the problems of measuring capacity.

If I might add my own half-new pennyworth, it seems that industrial commentators ignore another problem of defining capacity. Does one give the same weighting to the capacity to produce an obsolescent pro-

duct as one should to the capacity to produce a new product? Clearly, I believe that many are quick to give the same weighting to the same commenting upon an industry's overall capacity, leading at times to mistaken estimates of "over-capacity."

E. H. Cornwie,
Keston Lodge,
Beckenham Place Park,
Beckenham, Kent.

Somehow the first guppy in space (courtesy of Russia's Soyuz 21) didn't quite capture the imagination. The British have always taken their fish a little more seriously. Mobil too. We purveyed vegetable frying oil to the fish parlours of Manchester 80 years ago. Today it's the live ones around our North Sea platforms and in the Thames by our refinery that excite our interest. We make sure that every drop of water we use is thoroughly cleaned before it's put back. (In fact it's even cleaner than when we took it out). That keeps our piscine neighbours swimmingly fit and healthy, even if they're not high fryers.

Mobil

Lear Fan rescue scheme grounded by hoax

By Paul Taylor in New York

MRS Moya Lear's hopes of restarting the stalled Lear Fan aircraft project collapsed again yesterday as it emerged that she, and a group of other backers, had apparently been the victims of an elaborate hoax.

Yesterday, in the latest bizarre twist to the Lear Fan tale, Mr George Washington Upton was behind bars in a Reno jailhouse charged with being a "fugitive from California justice". Mr Upton had allegedly promised to bankroll a new Nevada-based company to restart the project, which had received £58.28m (£70m) of UK Government backing and was at one time hoped to create 2,800 jobs in Northern Ireland.

The news appears to dash hopes of restarting production of the controversial Lear Fan turbo-prop aircraft in Belfast, and Reno, Nevada, where employees were abruptly thrown out of work when funding for the seven-year-old project ran out more than two weeks ago. It had consumed about \$200m in venture capital, including the British government money.

Hopes for salvaging the project, devised by Mrs Lear's late husband, Mr William Fowler Lear, were boosted at the end of last week when Mrs Lear and a group of U.S. investors announced that they had formed a new company, Lear Aerospace, backed with \$257m in capital, to restart the venture.

It now emerges, however, that Lear Aerospace's chief financial backer was Mr Upton, who posed as a Mil-an investment banker called Mr Dominique Ferretti.

"Mr Ferretti" promised to put up the whole \$257m in new capital for the project, including a \$165m slice from one of his companies. His wife, Mrs Janet "Ferretti" whom he apparently married just three weeks ago, was named as chairman and president of Lear Aerospace, a private partnership comprising Mrs Lear, members of her family and close colleagues.

According to Mr John Aycoth, Lear Aerospace's newly appointed director of communications and a limited partner in the group, "Mr Ferretti" staged elaborate telephone conversations in front of the group to substantiate his promise that the venture would be restarted. Among the phone calls, he staged were ones to the British Government, Boeing, Fiat-Alis and Porsche. "He was a smooth talker," Mr Aycoth said.

W. German GNP falls 1%

Continued from Page 1

While capital spending climbed by 2.5 per cent in the first quarter of 1985, both state and private consumption were down on the final three months of last year. The last dovetails with the gloomy interim reports from the leading retail chains in West Germany.

According to the Ministry, exports grew by 1.5 per cent in real terms in the January-March period, while imports rose by 2 per cent. Even so, the five leading West German economies institutes predicted in May that the trade surplus would jump from DM 54bn (\$17.4bn) in 1984 to possibly DM 75bn this year, while the current surplus might double to DM 35bn.

Despite such apparent leeway, the Government - and in particular Herr Gerhard Stoltenberg, the Finance Minister - is refusing to adopt major reflationary measures. Some action is promised by the end of this month, but primarily to help the building industry. Herr Kohl refused again at the weekend to bow to pressure and push through the scheduled DM 20bn tax cuts all at once next year instead of, as planned.

Hanson Trust to raise £519m in rights issue

BY STEFAN WAGSTYL IN LONDON

HANSON TRUST, the acquisitive British industrial holding group, is raising £519m (£654m) from shareholders in the largest rights issue ever by a UK company wholly in the private sector.

It exceeds Barclays Bank's £513m issue earlier this year and falls short only of BP's £624m cash call made in 1981 when the company was nearly 50 per cent owned by the Government.

Yesterday's announcement immediately provoked speculation about when and where Hanson Trust might make its next acquisition, bringing price increases in the shares of several companies in which Hanson is rumoured to be interested.

City analysts calculated that the group is now in a position to spend £1bn or more. "Hardly anyone's safe now," said one.

Lord Hanson, chairman, said that the share issue would "provide a strong stable platform for internal growth from which future major acquisitions can be contemplated."

The company's strategy of expanding in both the UK and the U.S. followed since the early 1970s, would be unchanged. "We believe that our commitment to investment in basic industries on both sides of the Atlantic ensures that our growth will continue into the future," Lord Hanson said.

The group agreed that it was now

in a position to buy companies larger than any of its five most recent big acquisitions - Berea Group (£35m), UDS (£25m) and London Brick (£247m) in the UK, or McDonough (£180m) and US Industries (£332m) in the U.S.

Group borrowings of £660m net will be eliminated once the proceeds of the rights issue are collected.

Shareholders are being offered one new ordinary share at 185p for every six held to raise £519.3m. In addition the company is raising £148.7m from 15% per cent convertible preference shares.

These will be offered on a one-for-nine basis to shareholders, and on the basis of one for every £11.70 of 8

per cent unsecured loan stock.

Shareholders can choose to take one or both of the issues, which have been underwritten by merchant bank N. M. Rothschild. And, in a move designed to make such a large issue more acceptable to investors, the group is offering both the new ordinary and the preference shares in a partly-paid form, with payments due in two instalments.

Hanson also forecast a final dividend of 2.7p for the year to the end of September, making 4.2p, an increase of 26 per cent. Hanson shares fell 11p to 211p yesterday.

Hanson Trust has recorded continuous growth since it joined the stock market in 1964. Its expansion in both the UK and the U.S. has been particularly rapid in the last five years when pre-tax profits have leapt from £39.1m in 1980 to £169.1m last year. Last week, the company announced increased interim profits of £106.1m pre-tax.

Since the company's last rights issue - £42.7m in 1981 - the market capitalisation has grown from £201m to £2.5bn, making Hanson Trust, the UK's 10th largest group.

Yesterday's cash call takes the amount raised in rights issues so far this year to a record £3.2bn, against £1.5bn for the whole of last year.

China opposed to wide-scale entry of international banks

BY ROBERT THOMSON IN PEKING

CHINA is not ready for the wide introduction of branch offices by foreign banks or for free and open trading in shares, according to Chen Muhua, president of the People's Bank of China.

Peking had received numerous applications from banks in Europe, the U.S. and Japan to open branches in its special economic zones as a means of getting more of a foot in China's banking door, she said. These applications were "now being studied."

She stressed, however, that the rest of the mainland would remain off limits for such services.

"As we lack experience in this field, it is far too early for us to permit foreign banks to set up branches in other parts of the country," Chen said in a question and answer interview in the weekly magazine, Peking Review.

"The branch offices of the Hong-kong and Shanghai Banking Cor-

poration and the Chartered Bank in Shanghai are an exception. They were left over from old China and we have not changed the fait accompli."

At last count, 72 foreign banks had representative offices in China, most of them in Peking. They have been hoping for approval from the Chinese government to expand their services.

On the subject of buying shares, Chen, who is also a state councillor, said that the open door policy had led to "many new things" appearing, including "the pooling of funds and issuing of stocks and bonds."

Articles have been published in several magazines supporting the wide-scale introduction of share capital. The group's chairman objected that this took no account of the lost potential of the airline. Lorrho claims it had projected profits of \$10m a year before running foul of an alleged conspiracy by the international airlines.

Meanwhile, it has emerged that the contingency fee contract between Mr Morris and Mr Beckman provides for a payment to counsel equivalent to 50 per cent of any damages secured in a successful action.

The out-of-court settlement proposed by BA and its co-defendants offers just under \$85m cash, of which \$5m has been earmarked for Mr Beckman. However, the plaintiffs' lawyers are insisting that the true value of the settlement ought also to take account of all the money owed by Laker to its creditors which would be written off under the settlement terms.

developments. Our general principle is to give support to all things that are beneficial to the economic development," Chen said.

"At present we have not given consideration to whether stock shares can be sold and bought freely. The belief abroad that China has restored the stock exchange is not true."

There has been much discussion in foreign financial circles about the viability of China's foreign exchange reserves, which fell by \$2.25bn from \$16.67bn in the last quarter of last year. Chen attributed the fall to an "all-time high level of imports."

"We think such a fall in foreign exchange reserves is normal because it is a reflection of the development of our economic and technological co-operation with other countries. Overseas countries can have confidence in making investment in China."

Lorrho threatens to sue BA over Laker

Continued from Page 1

were in the court to hear the judgment, which ended with a clear direction from Mr Justice Leggatt: "It was better to leave such litigants to the consequences, in terms of litigation, to which the international character of their trade or business has rendered them vulnerable."

Sir Freddie said afterwards that he was "very pleased" with the outcome but expected an appeal. Midland Bank confirmed that it would indeed be appealing; the judge has granted it an extension of 14 days, during which it intends to seek leave to appeal and will also be asking the Court of Appeal for another injunction pending the final result.

Sir Freddie and Mr Beckman were also present at the afternoon meeting in the offices of Lorrho between Sir Edward du Cann, Mr Rowland and BA's lawyers. BA has laid down as a condition for any out-of-court settlement in Washington that no further litigation should be launched against it on the basis of Sir Freddie's affairs either before or after the Laker Airways' collapse.

Yesterday's meeting with Lorrho was BA's first attempt to discuss this condition with Lorrho, which

was Sir Freddie's partner in Skytrain Holidays and People's Airline, both launched in the autumn of 1982.

BA's lawyers are believed to have indicated the possibility of a nominal compensation figure for Lorrho - Sir Freddie has accepted the principle of a \$5m payment for himself - but the group's chairman objected that this took no account of the lost potential of the airline.

Lorrho claims it had projected profits of \$10m a year before running foul of an alleged conspiracy by the international airlines.

Meanwhile, it has emerged that the contingency fee contract between Mr Morris and Mr Beckman provides for a payment to counsel equivalent to 50 per cent of any damages secured in a successful action.

The out-of-court settlement proposed by BA and its co-defendants offers just under \$85m cash, of which \$5m has been earmarked for Mr Beckman. However, the plaintiffs' lawyers are insisting that the true value of the settlement ought also to take account of all the money owed by Laker to its creditors which would be written off under the settlement terms.

Craxi wins vote on wage indexation

Continued from Page 1

That is widely seen as a bargaining tactic to oblige unions and government to reach agreement on a substantially reduced level of wage indexation for next year.

The next big event in this summer of voting is the start on June 24 of elections by both houses of parliament of the next president of the republic. The seven-year term of 88-year-old Sig Sandro Pertini expires early next month.

The rebuff the Communists have suffered over the referendum may reduce their bargaining power over the choice of the new president of the republic, and give the Christian Democrats and Socialists a freer hand. But it is still anyone's guess who will finally emerge as president.

Once the new president has been elected, Sig Craxi will formally offer his resignation.

Our Markets Staff writes: Trading on the Milan bourse was strong in advance of the outcome of the referendum. The Banca Commerciale index added 2.63 to 314.30 while key indices in other European stock markets generally lost ground.

BIS chief calls for continued economic growth

By Peter Montagnon in Basel

MAINTAINING the momentum of recovery is now the most important task of economic policymakers in the industrial world, M Jean Godeaux, president of the Bank for International Settlements (BIS), said in Basel yesterday.

"Last year saw a continued upswing with growth in the Group of Ten industrial countries reaching an average 5 per cent, a rate reached only once before since the first oil shock of 1973," he told the bank's annual meeting.

But several problem areas remain, including unemployment and inflation, exchange rate volatility, external payments imbalances and the international debt situation.

The BIS annual report, published yesterday, again stresses the need for an orderly reduction in the U.S. budget deficit as a central plank in steering the U.S. economy towards a soft landing with a gentle moderation in growth and declining interest rates.

"We have not abolished the business cycle and I don't believe we can abolish it," Prof Alexander Lamfalussy, the bank's general manager, said yesterday. Details, Page 4; Argentine debt rescue, Page 7

Blueprint for the European Architect

By Paul Chesser in Luxembourg

TRADE ministers yesterday gave birth to the European Architect. And they gave themselves a hearty round of applause to celebrate the end of 17 years of discussion on how to give each other's architects the right to work in any EEC country.

The "birth announcement" weighed in as a 32-article directive with two annexes plus a series of statements in the minutes and justified by the use of "whereas" 30 times.

European Architect will have at least four years' full-time study or six years' study of which three must be full-time. In the case of West Germany, he or she can have three years of study plus four years' experience.

The German technique of training produced the snag that has caused years of discussion to stall. It is all a question of the Fachhochschulen in the provinces; their training is only three years.

So with machiavellian subtlety, Italy hit on the idea of merging training and experience. But even in the last hour-and-a-half before the applause, the snag kept coming. The Greeks were worried about architects coming to practice in the Community from outside; they were promised a Commission study.

France had some drafting difficulties, too: members of an advisory committee to oversee the whole process of architect movement should be appointed formally by governments, not by the profession.

It was only when Lord Cockfield, the Commissioner for the internal market, suggested the Ten should vote that the bickering stopped.

It was a protracted gestation and a troublesome birth, but architects will, in two years' time, join doctors, dentists, veterinarians, senior nurses and midwives as Community people who have freedom to establish themselves in any member country.

THE LEX COLUMN Lord Hanson goes big-game hunting

The voraciousness of Hanson Trust knows few bounds, least of all those set by its last balance sheet. For that reason, nobody in the City would have been remotely surprised by a £500m takeover bid from Hanson: at any given time, stock market gossip has three or four candidates on the rack. Not only that, but the usual reaction to a Hanson bid is to mark up both share prices: Hanson has in recent years enjoyed the priceless gift of reaping value in its own share price from things that it has not yet bought.

Yesterday it was quite otherwise with Hanson's decision to ask for £500m of equity, without so much as nominating its next victim. Hanson not merely caught the market on the wrong foot - by asking rather than offering - but saw a perfectly conventional rights-issue discount taken out of its share price, when the conglomerate arithmetic might have assured a premium if the shares had been issued in the course of an actual bid. Down 11p yesterday to 211p, Hanson's equity-raising may temporarily have caused it to drop a place or two in the list of the UK's largest companies - as measured by market capitalisation.

This churlish reaction no doubt tends to be put right as soon as the takeover machine is set visibly in motion, giving the institutions a prospect of their favourite three-waybet: a profit on the target company, added to an uplift on their ever-increasing holding of Hanson and a choice of interesting new investment propositions as Hanson disposes of the things it doesn't fancy. If Lord Hanson can indeed pull off this alchemist's trick yet again - and on a larger scale than ever - the City ought to lobby for an earldom. If it were not for Hanson's famous ability to sweat the assets down - an option not open to the less astute as direct owners of industrial companies - there would surely be some question whether they

ought to be investing so heavily in such a roundabout way.

In clearing the financial decks so thoroughly, Hanson has at any rate prepared itself to launch a takeover large enough to make a real difference to earnings - a task which gets harder all the time. At this level, assuming Hanson uses its broader equity base to gear up as heavily again, it is looking as if nothing worth under £1bn would be worth bothering with, a thought which might get some old favourites off the book: Courtaulds, Boverton and Tate & Lyle, may all be hoping that they now figure as slightly too small for the Hanson net. On the other hand, it is no longer possible to rule out multiple bids - which will just make the speculative game - spot the Hanson bid-stock - even more fun to play.

Amersham

Three years after flotation, Amersham is proving a most maddening business. Labelled in London as a wonder growth prospect in diagnostics, Amersham showed yesterday that it could grow all right - at 24 per cent pre-tax last year - but not at all from diagnostics.

That is not all. The City has acquired an obsession to radiate activity and duly pushed the share price up to its peak in May when Amersham said it would introduce a non-radioactive diagnostic test for trials in West Germany in the autumn. In fact, the research expenditure on the new system wiped out any profits improvement in the medical division and will no doubt go on depressing margins until 1986-87. It may be even longer before the system is making money in the U.S. - the only market where traditional radioactive testing is going seriously out of fashion.

For the moment, Amersham can surely still grow by packaging radioactivity in weird and wonderful ways - but not necessarily prosperously. So a buoyant level of retail sales in the summer months would at least show that the Government's benign neglect of broad money is keeping all the retailers happy; unless, of course, all this extra spending is the work of high-rolling tourists, in that event, the smiles would be rather broader at House of Fraser than at J. Sainsbury.

eminently for the crowded diagnostic market. After all, Amersham has built up just the sort of car-chase distribution system that suits products with short half-lives. Supplying U.S. research laboratories may carry translation risks and industrial customers are exposed to the cyclical forces in their industries, but it is hard to see why these businesses should be on much lower multiples than making diagnostic kits (whatever they may be).

Retail sales

Not much can sensibly be deduced from a single month's provisional retail sales figures but, taken together with the revised numbers for the earlier months of this year, the message of the May statistics produced yesterday was abundantly clear. The seasonally adjusted volume index has now risen for four months in succession and, in value terms, sales stand 10 per cent above the level of a year ago.

Any number of special factors can be marshalled to explain the pronounced spring bounce. The ending of the miners' strike has undoubtedly contributed to consumer confidence, back-payments to local government workers have by now worked through in to the shops and PAYE codings have been adjusted to accommodate the changes in the budget. From now on, the going should be tougher. Inflation will be on a rising trend until next month and the recent weather will have done nothing for sales of summer frocks.

So a buoyant level of retail sales in the summer months would at least show that the Government's benign neglect of broad money is keeping all the retailers happy; unless, of course, all this extra spending is the work of high-rolling tourists, in that event, the smiles would be rather broader at House of Fraser than at J. Sainsbury.

Progress Report No 17 from

Britain's No.1 manufacturing exporter

Paris Air Show:
BAe announces civil orders worth over \$630,000,000

\$70,000,000 orders for ATP airliner
First orders, valued at over \$70 million, have been placed for the ATP (Advanced Turbo-prop) airliner. LIAI, the fast-growing Caribbean airline, has ordered two, with options on two more, and British Midland Airways has ordered five.

\$58,000,000 US airline order for Jetstream 31
An order for 20 Jetstream 31 turboprops, worth over \$58 million - the largest yet received for the BAe light transport - has been placed by Republic Express Airlines, a subsidiary of Phoenix Airline Services of Atlanta, Georgia. This brings total sales to 87, including 56 to US customers.

Over \$170,000,000 orders for BAe 146
The contract for ten BAe 146 jetliners has been signed with the China Aviation Supplies Corporation (CASC). Also announced: an order for one 146 to be operated for the Indonesian Government by Pelita Air Service. These orders, worth over \$170 million, bring firm orders for 146 to 52, with over 30 additional options.

New BAe 125 business jet orders worth over \$30,000,000
Five new orders from US corporations, valued at more than \$30 million, have taken total sales of the BAe 125 business jet to 610 aircraft worth (at 1985 values) some \$1780 million. Almost 80 per cent valued at over \$1,380 million, have been for export.

New Airbus orders mean \$300,000,000 work for BAe
BAe's share of two new orders won by Airbus Industrie, in which it is a full partner, represent work worth over \$300 million for BAe sites. Eight A320 jetliners have been ordered by Ansett of Australia, and three A300s by Korean Air. These orders follow confirmation of Pan Am's order for twelve A310s and sixteen A320s.

BAe wins first Earth Station order, worth \$1,900,000
BAe has won from the European Space Agency its first Earth Station order, worth \$1.9 million. Two TD94 transportable Earth Stations are to be supplied to check and demonstrate four specialised business service channels carried by the Olympus 1 satellite, also built by BAe. They can also work with other satellites.

More examples of how British Aerospace's unequalled experience in hypertechnology is helping Britain to stay a world leader.

Canadian stake in UK's Telegraph

BY LIONEL BARBER IN LONDON AND BERNARD SIMON IN TORONTO

MR CONRAD BLACK, a wealthy Canadian industrialist and chairman of the privately-owned Ravelston Corporation, has paid £10m (\$12.6m) for a 14 per cent stake in the Daily Telegraph Group, which owns Britain's Daily Telegraph and Sunday Telegraph newspapers.

Mr Black will be the single largest outside shareholder in the group which is controlled by the Berry family led by Lord Hertwell, the 74-year-old chairman. Mr Black will also join the Telegraph board as a non-executive director.

The Telegraph Group said last night that it had secured agreement in principle from UK institutions

and the Ravelston Corporation, to subscribe to £30.1m in new shares. The funds, together with securing £30m of debt, will help pay for two new printing plants in London and Manchester.

Raising the £30m funds through a private placing of shares has proved difficult for the Daily Telegraph's financial advisers, NM Rothschild merchant bank and Cazenove, the UK stockbrokers.

The new shares represent around 40 per cent of the enlarged share capital of the group. The Telegraph said last night that the subscription of funds is conditional upon agreement from a syndicate of financial

institutions to provide debt, lease and hire purchase finance for £20m capital expenditure.

The debt and lease finance is being provided by a syndicate led by Security Pacific International Leasing (Europe) Inc and another group company, joined by Wardley London, and the National Westminster Bank, the Daily Telegraph's clearing bank. CATH Equipment Finance (UK) is providing hire purchase facilities.

Last night, Mr Black's investment was described by the Telegraph's advisers as "purely passive."

William Hall and Paul Taylor in New York assess the impact of the Supreme Court's ruling

Marriage licence for America's little banks

THE Supreme Court decision yesterday upholding the constitutionality of regional banking compacts represents a monumental decision which could reshape the face of U.S. banking, according to Wall Street analysts.

Ever since Citicorp, the world's largest banking group, challenged the first of these regional banking agreements in New England last year because it feared it would be prevented from obtaining a foothold in one of the more attractive banking markets, the rest of the banking community has awaited the Supreme Court decision with bated breath.

The ruling is crucial both to the major money centre banks and their regional counterparts. The big

banks are anxious to expand into faster-growing markets, such as the south east, and reduce their over-dependence on Third World lending and limited local deposit bases.

But rapidly-growing regional banks have been guarding their turf jealously. With Congress unable to make up its mind on the issue of nationwide banking, the states, pushed by local bankers, have seized the initiative. Up and down the U.S., local legislation has been passed which allows mergers between banks in states with similar laws in the same geographic region - but excludes the major money centre banks. Effectively, the trend towards regional pacts has been a defensive strategy.

A total of 22 states have passed

some form of reciprocal banking legislation - and 13 of them have specifically excluded New York, the financial centre of the U.S. from their plans. The general purpose of these regional banking compacts, most of which have been passed in the last two years, is to give local banks time to consolidate their resources ahead of any wider move towards nationwide banking.

A handful of regional banks, such as Sun Banks in Florida and Trust Company in Georgia, have already put together multi-billion dollar merger plans, but most have waited for the Supreme Court decision.

Prices of regional bank stock, particularly in the south east, had risen dramatically as investors bet on the pacts generating a wave of

takeovers. Most money centre bank stocks, meanwhile, have been weighed down by credit quality problems at home and abroad.

The regional banks' current strength is reflected in their stock market capitalisations. NCNB of North Carolina, for example, with \$15.7bn in assets, is valued at \$1.3bn, while Manufacturers Hanover, which is more than four times as big in terms of assets, is capitalised at just \$1.6bn.

Yesterday, following the Supreme Court decision, regional bank shares soared in heavy trading. The sharp spike in share prices reflects Wall Street's conviction that the decision will precipitate a flood of takeovers at premium prices among regional banks, and spur other

states to follow the example set in New England and the south east.

Mr Mark Alpert of Bear Stearns said yesterday that he believed the decision "could lead to the emergence of more than half a dozen regional banking companies with assets of between \$30bn and \$40bn".

Among the regionals which could emerge as major rivals to the money centre banks over the next few years are NCNB National Bank, Barnett Banks of Florida, Wachovia Corporation and Sun Trust Banks. All are primarily domestic banks with above average growth and vastly superior profitability compared with most of the bigger rivals.

The best hope for the New York

major, which have tried various methods to circumvent the general federal barriers to interstate banking now appears to lie with Congress.

Although Congress has failed repeatedly to grasp the thorny issue of interstate banking, a strong lobby is emerging supporting a comprehensive bill which would address this and other issues. Earlier this year Mr Paul Volcker, chairman of the Federal Reserve, added his weight to the push for Congressional action, laying out a blueprint for the phased introduction of nationwide banking within three years. His plan would use the regional agreements as an interim step in the move towards full interstate banking.

Kosmos still wants Borregaard shares

By Fay Gjester in Oslo

KOSMOS, the Norwegian industrial, offshore and shipping group, still wants to buy the shares of another large industrial group, Borregaard, with which it would like to arrange a merger. Its continuing interest pushed Borregaard price up to Nkr 442 per share on Friday.

Kosmos' drive to acquire a major stake in Borregaard appeared to have been thwarted about a fortnight ago, when three of the latter's largest shareholders refused an offer for their shares. Kosmos continued buying, however, and by the weekend had moved into second place among Borregaard's shareholders, with a stake of just over 10 per cent.

Kosmos and Borregaard are involved in many of the same activities - forest products, including production of sulphite cellulose and magazine paper, forestry and production of refined edible fats. Kosmos' management believes that a merger could offer important synergistic advantages.

● A Nkr 178m (\$38.1m) share issue by Bergen Bank, Norway's third largest commercial bank, attracted subscriptions totalling Nkr 206m, the bank announced. Priced at 125 per cent of par, the issue will raise share capital to Nkr 863m. It has increased the number of Bergen Bank's shareholders - individuals, companies and institutions - by 7,800 to 49,000.

Payment for the new shares, which will get full dividend for 1985, is due by June 17.

● Norsk Hydro, the Norwegian industrial and energy group, has secured government approval for its scheme to build a Nkr 650m new fertiliser facility at its industrial complex at Porsgrunn, eastern Norway. The new factory will boost fertiliser capacity at the Porsgrunn complex by 550,000 tonnes annually to more than 2m tonnes.

Nuovo Ambrosiano earns the Vatican's blessing

BY ALAN FRIEDMAN IN MILAN

Sig. Giovanni Bazzoli: NBA chairman

THINGS appear to be coming right at Nuovo Banco Ambrosiano (NBA), the Milan-based successor to the late Roberto Calvi's failed Ambrosiano group. This week should see the completion of a L1,500m (\$77m) capital increase, achieved through the conversion of warrants held by 35,000 former shareholders of the Calvi bank.

The net effect of "operation warrant" is that something like 75 per cent of NBA will be in private hands. Only two state banks remain shareholders, and the bank is poised to go ahead with plans to seek a share quotation on the Milan bourse, an indication that the trauma of the Calvi years is finally consigned to the past.

The warrant exercise is NBA's way of compensating the thousands of shareholders in Ambrosiano who lost their shares, which were valued at L40,000 apiece at the time of the crash in 1982. Old Ambrosiano shareholders were offered three warrants for every share held to

subscribe in May 1985 for shares in Nuovo at L1,000 each. The only condition imposed was that the shareholders maintained a deposit account with the new bank.

The buoyant response from old shareholders suggests that Nuovo Ambrosiano is a respectable institution which can attract investors. More specifically, however, the success of the warrant exercise is a logical shareholders' response to two factors: the L1,000 price per share available with the warrants is less than the L1,300 paid in February when Istituto Mobiliare Italiano (IMI), the state corporate finance institution which was part of the seven-bank rescue pool in 1982, sold its 16.7 per cent stake in Nuovo to a consortium of private banks from the Veneto region. Anyone holding shares in NBA stands to gain when the bank is finally quoted on the Milan bourse, probably towards the end of this year.

The warrant exercise raises NBA's capital from L800m to

L750m. But its real importance is that it is another step towards the rehabilitation of the bank, which in 1982 was reconstituted with four private bank and three state bank shareholders. At the time the state-private split was 50-50.

Although Nuovo lost L24.9m in its first 11 months of its life, it broke even in the year to June 1984 and even achieved a modest L1,100 (\$583,000) net profit for the six months to December 1984.

NBA's total deposits have climbed from L1,900m in August 1982 to L3,900m as at last December, a reasonable achievement even if the bank remains relatively small.

The next key step for Nuovo Ambrosiano comes in July, when the bank is to announce details of a plan to merge itself with its 47 per cent owned and listed subsidiary - the La Centrale financial holding company. This merger, a complicated transaction because it involves taking the unquoted NBA and combining it with a quoted subsidiary, was made necessary last year when the Bank of Italy blocked the proposed sale of La Centrale to a group of Veneto banks (mainly the same ones who bought IMI's 16.7 per cent stake in February).

Following the merger, NBA should have total capital of at least L1,000m plus close to 50,000 shareholders. The rehabilitation will have been more or less completed.

The only vaguely contentious issues remaining concern the role of the Veneto banks and the news that Istituto per le Opere di Religione (IOR), the Vatican bank, has become a shareholder in Nuovo Ambrosiano. Some Italian analysts suggest that the real goal last year of the Veneto banks, in seeking to acquire La Centrale, was its lucrative Banca Cattolica del Veneto subsidiary. Having failed to get their hands on the Cattolica deposit base in the Veneto region, the Veneto banks took another route, buying IMI's 16.7 per cent stake in NBA and a further 5 per cent held by the private Credito Emiliano.

All in all, Italian bankers say that NBA is not only back in the private sector, but also partly back to its roots as a Catholic bank. As if to emphasise this, it emerged last week that the Vatican bank has become a Nuovo shareholder. The Vatican, using warrants-for-shares, is back only one year after paying \$241m "in recognition of moral involvement" to creditors of the collapsed Calvi bank. The Vatican bank was the direct and indirect owner of 10 of the overseas dummy companies to which the Calvi bank lent \$1.3bn.

Does the Vatican's return as an Ambrosiano shareholder matter? Probably not, but given its past association with the shady activities of Calvi, some bankers in Milan reckon the return of the IOR as a shareholder "is not in the best taste".

Meanwhile, Nuovo Ambrosiano is putting its house in order. Gone are the intrigues of the Calvi era and instead the successor bank is plodding along, doing the right things in the eyes of the Italian financial community. As the Italians would say, *meno male*, or "finally it is done".

NMB plans West German foothold

BY LAURA HAUN IN AMSTERDAM

NMB (Nederlandsche Middenstandsbank), the third largest Dutch commercial bank, plans to enter the West German market through a takeover of Nederlandse Credietbank (Deutschland) of Hamburg, a subsidiary of the Amsterdam-based NCB.

NCB Deutschland had a balance sheet total of DM 20bn (\$4.4m) at the end of last year and 30 employees. Staffing at the Hamburg bank is not expected to be affected by the

takeover, according to both NMB and NCB.

NCB was completely acquired last year by Chase Manhattan Bank, which has a number of branches in West Germany, including Hamburg. Chase Manhattan has been aggressively reorganising NCB, including the closure of 18 branches in the Netherlands last year and an integration of foreign operations into Chase's network.

NMB, meanwhile, has been expanding its international network of branches, with the takeover last year of Inter-Alpha Asia of Hong Kong and Singapore and plans for a branch in Tokyo. NCB Deutschland will open the door to West Germany, which is the Netherlands' largest trading partner.

NMB, which has 30 offices worldwide, had a balance sheet total of F1 60bn (\$18.6m) at the end of 1984. NCB had a balance sheet total of F1 15bn.

currency facility, there may be repayments of \$2,900 for each SwFr 5,000 principal amount.

A SwFr 20m 12-year issue for Manilla was priced as indicated at par with a 5 1/2 per cent coupon by Union Bank of Switzerland. The SwFr 40m convertible for Okuma and Howa Machinery Ltd had its coupon cut to 1 1/2 per cent from 1 1/2 per cent by Morgan Grenfell on Suisse.

Matina, a subsidiary of Belgium's Petrofina, issued a F1 100m Euro-note with a 5-year life, 7 1/2 per cent coupon and 9 1/2 per cent pricing, led by NMB bank.

● Nationwide Building Society of the UK said yesterday that it plans to tap the sterling floating rate note market as soon as building societies are allowed to do so, probably this autumn, following changes in this year's Budget. An initial issue of about £100m led by Credit Suisse First Boston is expected to be followed by further issues.

Where ambitions are achieved!

TWA may seek friendly merger

By Terry Dodsworth in New York

TRANS WORLD Airlines, the U.S. transatlantic carrier, was in hectic negotiations yesterday on a series of possible alternatives to the hostile takeover proposal from Mr Carl Icahn, the Wall Street investor.

The company refused to give details of its discussions, but it is believed to have considered a variety of approaches, including mergers with two other U.S. airlines, Eastern and Texas Air, and a bid from Resorts International, the hotel and casino operator.

In addition, TWA has also looked at the feasibility of a leveraged buy-out by its own management, a manoeuvre frequently used by companies that want to remain independent. Under a leveraged buy-out, senior management borrows heavily to finance the acquisition of the equity in a company.

TWA shares rose by 5% on Friday to \$19 1/2 but remained unchanged in early trading yesterday, with Wall Street speculation mainly centring on a bid from Resorts International, a secretive Atlantic City-based group.

Resorts International made a loss last year of \$4.7m on revenues of \$494m but has a strong balance sheet, with substantial cash in hand.

Mr Icahn already has a strong position in TWA, after acquiring 32.8 per cent of its shares over the last few weeks. His proposed offer, at \$18 a share, would value the airline at \$821m.

Shell Oil buyout completed

By Our Financial Staff

SHELL OIL, of the U.S., has become a wholly owned subsidiary of SPNV Holdings, which itself is a wholly owned company of the Royal Dutch/Shell group, thus completing the bid to buy out the minority shareholders.

SPNV said the present directors, officers and managers of Shell Oil would continue in office and that "the business and affairs of Shell Oil will be operated under their control in the same manner as before."

Completion of the deal comes despite continuing litigation from some of the minority shareholders.

Gulf Canada to sell drilling fleet, Page 18

EUROBONDS AND CREDITS

Buying interest subdued in market

BY ALEXANDER NICOLL IN LONDON

FRIDAY'S dramatic shake-out in the New York bond market had a beaming effect on the Eurobond market yesterday. The recent flurry of tightly priced dollar issues was all but halted, and last week's issues mostly showed losses larger than the market's general half-point decline.

The atmosphere was one of apprehension rather than panic, with traders reasoning that a cut in U.S. discount rate was still by no means ruled out. They were encouraged by the fact that the New York market's tailspin appeared to have been halted yesterday. Nevertheless, buying interest in new paper has clearly been dampened for the time being.

Among last week's issues, the \$100m 10-year, 10 per cent, par-priced issue for Seagram was trading at less 3/4, well outside its fees, Atlantic Richfield's \$250m and Ford Motor Credit's \$100m bonds were both bid at 4 points below par.

In these circumstances, it was not surprising that only one borrower, Japan Air Lines, braved the dollar

BNF Bank bond average			
	June 10	Previous	
102.750	102.750	102.847	
High	102.850	102.850	Low
102.850	102.850	102.850	93.840

market yesterday. It is issuing a \$100m 10-year bond with a 10 per cent coupon and 100% price, callable after seven years at 101 1/2 per cent with half-point cuts in succeeding years. Bankers Trust International is running the books with JTCB International as co-lead. The issue was not well received but managed to stay within its 2 per cent total fees.

The Mortgage Bank of Denmark, with the guarantee of the Kingdom, tested the absorbency of the New Zealand dollar market, which saw three issues last week. Mitsubishi Finance International is bookrunner for a NZ\$50m 5-year issue, priced at par with a 16 1/2 per cent coupon. Total fees are 2 per cent and selling commission 1 1/2 per cent.

More action was seen in continental Europe, though the biggest issue, a DM 500m 10-year floating-rate note from the Bank of Greece, met a poor reception in the market. The pricing at a quarter point above six months London inter-bank offered rates (Libor) was seen as over-aggressive for the name. Lead manager was Commerzbank, and the issue was trading around its total fees of 10 basis points.

Dresdner Bank led a DM 150m issue for Société Luxembourgeoise de Centrales Nucléaires, with a 10-year life, 7 1/2 per cent coupon and 9 1/2 per cent pricing. It was trading at around its 1 1/2 per cent selling commission.

The West German market lost between 1/2 and 3/4 point in quiet business.

In Switzerland, Pan Am Corporation, holding company for the U.S. airline, made a SwFr 125m 10-year dual currency convertible issue, led by Société with an indicated coupon of 8 1/2 per cent and conversion premium of 15 per cent. Under the dual

currency facility, there may be repayments of \$2,900 for each SwFr 5,000 principal amount.

A SwFr 20m 12-year issue for Manilla was priced as indicated at par with a 5 1/2 per cent coupon by Union Bank of Switzerland. The SwFr 40m convertible for Okuma and Howa Machinery Ltd had its coupon cut to 1 1/2 per cent from 1 1/2 per cent by Morgan Grenfell on Suisse.

Matina, a subsidiary of Belgium's Petrofina, issued a F1 100m Euro-note with a 5-year life, 7 1/2 per cent coupon and 9 1/2 per cent pricing, led by NMB bank.

● Nationwide Building Society of the UK said yesterday that it plans to tap the sterling floating rate note market as soon as building societies are allowed to do so, probably this autumn, following changes in this year's Budget. An initial issue of about £100m led by Credit Suisse First Boston is expected to be followed by further issues.

Innovative structure for BNP credit

BY PETER MONTAGNON, EUROMARKETS CORRESPONDENT, IN LONDON

BANQUE NATIONALE de Paris yesterday launched a \$800m, 10-year facility in the Euromarkets with an innovative structure combining features of a standby credit with a floating-rate note.

The deal is believed to mark one of the first formal attempts to securitise a standby facility, adding additional flexibility to this growing sector of the Euromarket.

Led by Credit Suisse First Boston, it involves the issue of \$800m nominal value of floating-rate notes, of which only \$100m will initially be paid in. Unusually for the Eurobond market this first tranche will be in registered form and marketed only to a select group of up to 250 authorised banks.

The registered tranche will also carry an obligation on holders to subscribe to subsequent calls on the remainder of the issue by the borrower. Later calls will, however, take the form of bearer notes which can be broadly distributed.

"We've designed the deal as a conscious effort to create a securitised standby," Mr Philip Colebatch, a senior executive of Credit Suisse First Boston, said. He pointed out that both participants' commitments to provide money embodied in the registered tranche and any subsequent actual loans had been made marketable by the structure.

This had allowed BNP to offer a facility that was both cheap for itself and which should be attractive to its bankers, he said. BNP is thought likely to use the deal to refinance some of the more expensive standby credit it is obliged to maintain under French banking regulations.

Both the registered floating-rate note tranche and subsequent bearer note issues will bear interest at a margin of 5 basis points over Libor, but holders of the registered notes will also receive the margin on the uncalled portion, giving an effective total margin of 30 basis points on the first \$100m tranche.

Additionally, subscribers to the first \$100m registered tranche

would receive commissions totalling 27 1/2 basis points on the full \$800m, CSFB said, while calls on the facility would be made at a 1 per cent discount in 1986, narrowing in stages to 10 basis points in 1994.

Bankers believe that, although these terms are broadly in line with what BNP would have to pay on a standby credit facility, they are substantially in excess of its likely borrowing costs on a conventional floating-rate note, and calls on the issue are therefore unlikely.

But the success of the new structure depends on the market's perception of the tradeability of the registered notes, which may only be bought by a limited group of authorised banks.

INTL. COMPANIES & FINANCE

Carla Rapoport reports on a leading Japanese watchmaker's ambitions

Citizen aims for the big time

ONE OF the major reasons for the success of Japanese companies in world markets is the intense competition that they endure in their home market. In watches, the battle for number one has long been between Hattori Seiko and Citizen.

Only 55 years old to Hattori Seiko's 100-plus years, Citizen has long been the Avis to Seiko's Hertz. This year, for the first time, however, Citizen claims to have surpassed Seiko to become the world's largest manufacturer of watches. Hattori Seiko flatly says this is not true. Even so, the claim highlights the fact that Citizen still aims to be number one and will not rest until it achieves this goal. Whether it becomes number one is almost irrelevant. Its efforts, in the meantime, remain impressive.

The company is pursuing its strategy on a number of fronts. In watches, it is using its knowledge of machine tools to automate fully its assembly lines from start to finish, including case assembly. It is boosting its advertising in Europe and the U.S. to keep exports moving. And significantly, it is funding a move

away from watches to protect its margins and to insulate itself from the difficulties of the mature market.

"The watch business's profits, as a percentage of overall profits, are still greater than watch sales as a percentage of the total, but we do not know how long that will last," says Mr. Norihiko Yoshikawa, manager of marketing for Citizen Trading, the company's sales arm.

Expertise

Indeed, despite a 20.6 per cent rise in watch production last year — against a 9 per cent increase in production worldwide — Citizen's pre-tax profits went up by just 13 per cent to ¥12bn (\$48m) on sales of ¥147.8bn. And the company said the increase was largely due to higher profits from "financial deals" — a term meant for improved asset and portfolio management, as opposed to higher operating margins.

Next year, the group projects similar profits. In 1987, however, Citizen predicts that sales will exceed ¥200bn and pre-tax profits will hit ¥17bn, which would push the group past its peak, reached in 1981. The key

to this achievement will be to bring down watches from their current 78 per cent of total sales to just 57 per cent by 1987.

The hopes for this diversification are pinned on Citizen's move into industrial machines and information equipment. In the first category, Citizen has drawn heavily from its expertise in watch manufacturing. Not surprisingly, the group is already selling abroad its computer-driven lathe, machining sensors, automated assembly machines, automated parts feeders and assembly robots. It specialises in machines which automatically fix electronic parts into mechanical products.

Last November the group linked up with Marubeni, Japan's huge trading company, to gain a sales and technical service system in North America. Never a company to be accused of having modest ambitions, Citizen says it hopes to become "the leading manufacturer in the precision factory automation field."

The group has also moved into information equipment. Last year it built capacity for the production of large-sized liquid crystal displays, 8.5 inch

flop disc drives, and other office automation equipment. It also brought out a pocket-sized television. Though not before Seiko had done so.

Citizen remains largely unconcerned about competition from the recently reorganised Swiss watch industry. "It may be safe to say that the Swiss watch industry is halfway to reconstruction," says a Citizen executive.

Competitor

"Seiko is our number one competitor and we want to be number one in everything," says Mr. Yoshikawa.

Citizen's diversification has not lessened its concentration on watches. It hopes to double watch sales in the next three years and to reap higher margins from its fully automated lines. The company's attention to detail has reached even to the near dormant mechanical watch market. Citizen discovered that African and Middle Eastern customers prefer the ticking watch which can be wound up. As a result, sales of mechanical watches jumped by 14 per cent last year, their first increase since the beginning of the decade.

HK police raid headquarters of Overseas Trust Bank subsidiary

BY DAVID DODWELL IN HONG KONG

OFFICERS OF Hong Kong's Commercial Crimes Bureau yesterday raided the headquarters of the Hong Kong Industrial and Commercial Bank (HICB), the subsidiary of Overseas Trust Bank (OTB) which has been rescued from insolvency by the Hong Kong Government at a cost to local taxpayers of at least HK\$25bn (US\$257m).

The raid came shortly after news that Hong Leong, the Malaysian-controlled finance group, has cancelled plans laid just a month ago to acquire control of HICB for just under HK\$257m.

While Hong Leong's move was not unexpected, it underscores fears that this 62 per cent-owned subsidiary of OTB faces difficulties linked with the collapse of its parent. However, since the Government has taken complete control of OTB, guaranteeing its debts against the territory's exchange fund, it is assumed that there is no risk that HICB will also fail.

News of HICB's problems came as the staff in OTB's 44 local branches reopened their doors for the first time since last Wednesday night. While it remains unclear how large OTB's liabilities are, most observers said the Government's prompt action in coming to its rescue averted the very real possibility of a major banking crisis in the territory.

OTB is one of Hong Kong's largest locally-incorporated banks, with about 120,000 depositors accounting for deposits of around HK\$7.4bn. It is understood that the government's prompt action was due as much to fears that alarmed depositors would riot as it was to fears of the financial implications of a collapse. Police were dispatched to guard all OTB branches on Thursday last week, when it

was realised that the bank's insolvency was unavoidable.

Calm seemed to prevail yesterday, with no pressure reported at any OTB branch. The Hang Seng index, the territory's most widely followed economic indicator, recovered almost 30 points to close at 187.85 after dropping by more than 30 points on Friday.

A fourth OTB executive was charged yesterday in connection with the failure. Mr. George Leow Tshun-L, the

bonorary consul in Hong Kong, disappeared early this year, shortly before Hong Kong's Banking Commissioner suspended Dominican Finance Loans from OTB since 1980 amount to about HK\$900m.

Mr. Patrick Chang, a senior OTB executive, who was arrested last week while trying to leave Hong Kong with over U.S.\$1.5m in his suitcase, was using a Dominican passport at the time. OTB loans outstanding to directors of the bank are understood to amount to about HK\$2m.

The Government insists that no other banks are immediately vulnerable, though a number are on its "intensive care" list. It has at the same time made absolutely clear that the authorities will not move to rescue any other bank that fails — a move which most banking analysts predict will result in a "right to quality" among depositors.

Banking reforms are already under discussion, but there is likely to be increased pressure for tighter regulation. Fresh calls for deposit insurance, long opposed by the big banks in Hong Kong, will receive fresh government attention in the weeks ahead.

Meanwhile, Sir John Bremridge, Hong Kong's Financial Secretary, has said the government is to call upon a "world class banking adviser" to consider the rationalisation of OTB and the best way of paving the way for the Government to resell it.

Mr. Charles Poirin, from the London merchant bank Hambros, was called in days before OTB collapsed, and is seen as a front-runner to fill this longer-term role. He would also be asked to prepare Hong Kong Bank—which the Hong Kong Government acquired in similar circumstances 20 months ago—for resale.

Kawasaki Steel may buy U.S. company

By Carla Rapoport in Tokyo

KAWASAKI STEEL, one of Japan's big five steel companies, yesterday confirmed that it is negotiating to buy a U.S. venture capital group which specialises in the manufacture of materials used by the semiconductor industry.

The move will be Kawasaki's first venture into the semiconductor field and marks its aggressive efforts to diversify away from steel and into smaller, niche markets.

The U.S. company is NIK Corporation, based in Santa Clara, with sales of around \$10m a year. "This company is linked to a high-growth market," Kawasaki said yesterday. It added that it is actively looking for more companies in this field to boost its diversification plans.

Last week Kawasaki announced a marked recovery in profits for the year to March, with pre-tax profits up to ¥43.2bn (\$173m) on sales of ¥1,220bn.

IPIC seeks foreign outlets

By Angela Dixon in Abu Dhabi

ABU DHABI is poised to invest in petroleum products networks abroad through its Government-owned investment company, International Petroleum Investment Corporation (IPIC). Agreement in principle has been reached for the purchase of one U.S. distribution network, while negotiations have reached an advanced stage with companies in Italy, Belgium and France.

Mr. Khalifa Mohammed al Shamsi, managing director of IPIC, said the corporation's main interest was in acquiring companies with a distribution network which included crude oil transportation, refineries, product transportation and retail outlets.

Research activities boost Amersham to record £17m

Amersham International recorded its fifth successive year of uninterrupted growth in 1984-85 by raising both sales and pre-tax profits by 24 per cent.

A strong performance by the research division together with some assistance from favourable exchange rates saw profits surge from £13.72m to £17.07m.

With increased sales in all sectors group turnover showed an improvement of £20.61m to £108.2m.

Looking ahead Dr Stuart Burgess, group managing director and chief executive expects further progress.

Meanwhile, the final dividend is being stepped up from 3.1p to 3.5p giving shareholders 1p more on their total at 6p net per 25p share.

Amersham, a producer of radioactive materials, was sold off by the Government early in 1982 at 142p per share amid strong criticism from the opposition.

Initial dealings saw the shares soar to 190p. Yesterday they closed at 386p, a fall of 6p on the day.

A divisional breakdown of group turnover and operating profits (£18.57m against £14.6m) for the past 12 months to March 31, 1985 shows medical, £8.05m (£42.07m) and £5.17m (£3.94m), research £4.14m (£3.14m) and £1.79m (£1.1m) and industrial £28.15m (£14.07m) and £4.27m (£2.88m).

A geographical analysis of turnover shows UK £14.83m (£13.99m), Rest of Europe £37.03m (£20.2m), The Americas £31.87m (£24.97m) and rest of the world £23.57m (£18.72m).

Dr Burgess says the results represent substantial progress by the group, assisted in part by favourable movements in exchange rates. He adds that a

Dr Stuart Burgess, managing director

further all-round improvement in productivity helped fund additional investment in future growth.

In line with Amersham's declared policy of investing heavily in research, spending on this activity rose by 34 per cent to £10m net of Government grants. This expenditure represents 53 per cent of sales and an even higher proportion in real terms.

During the year a further £13.3m was invested in capital projects. At the start of the current financial year the company announced plans for a major manufacturing capacity expansion at Cardiff to cater for increased demand for research products.

The medical products division maintained its rate of growth in turnover despite severe competition and continued governmental

restriction on health care spending worldwide.

Dr Burgess explains that profits from the medical business were again affected by a heavy commitment to research and development, principally on the new enhanced luminescent immunoassay system. Since the end of the year, this new system has been unveiled and production is on schedule for introduction to the market beginning this autumn.

In research products increases in sales and profits flowed from the programme of rapid new product introductions, directed equally towards non-radioactive and radioactive items. Most new research products launched during the year were for biomedical research.

The improved sales and profits from industrial products were stimulated by the consolidation and extension of the economic recovery in its markets first noticeable towards the end of 1983-84.

Although Dr Burgess is looking for further progress during 1985-86 he points out that exchange rates generally have reversed their favourable trend and their overall effect on the year is uncertain.

Interest charges for 1984-85 rose from £878,000 to £1.51m. Tax accounted for £5.52m (£4.66m) of which the UK share rose to £2.1m (£1.34m). Minorities took £931,000 (£873,000).

Earnings per share emerged at 21.2p, compared with 18.4p. The directors point out that over the past five years the increase in sales has averaged 21 per cent and pre-tax profits 34 per cent.

Selincourt forecasts 34% profit increase

By Andrew Arends

Sir David Selincourt, chair of Selincourt, the fashion-wear and fabrics group fighting off a £20.3m takeover bid led by Mrs Jennifer D'Abo, head of the Ryman office equipment chain, yesterday forecast a 34 per cent increase in its pre-tax profits "to at least £1.85m in the financial year to January 31 1986."

In a letter to shareholders, Sir David also launched an attack on Mrs D'Abo's management record at Ryman. He pointed out that Ryman's report and accounts for the year to end-December 1984 had been heavily qualified by its auditors.

The accounts, Sir David said, showed that even including one-off profits on the sale of investments of £63,553, Ryman made pre-tax profits of just £29,724, on turnover of £13.32m. This compares with losses of £1.73m on turnover of £11.36m in the previous year.

Moreover, he added, taking into account changes in accounting policy, such as the waiving of investment on a £4m 17 per cent nonsecured loan, and other non-interest bearing loans of £383,000, Ryman would have made a loss of £814,164 last year.

Mrs D'Abo, who is bidding through Stormguard, a "shell" company, yesterday described Sir David's comments as "cheeky".

Morgan Grenfell, her financial adviser, said that as of December 31 1984 the financial position of Selincourt, the Ryman holding company, was that shareholders' funds stood at £1.4m and net third party indebtedness at £420,000.

"The impression Selincourt seeks to give is totally misleading," Morgan said.

Morgan added: "It is equally misleading to seek to include notional interest on inter-company indebtedness to undermine Ryman's real performance."

Stormguard is offering 13 of its own shares for every 10 of Selincourt. Stormguard's shares rose 2p yesterday to 28p to value its bid at 36p per share. Selincourt rose 1p to 29p.

Stefan Wagstyl on Hanson's £519m rights Call that brought the City to life

Twenty-one years of Hanson Trust

- 1964 Wiles Group, sack hire and fertilizer maker, stock market flotation; acquisition of Oswald Tilston and Commercial Motors, bringing in Mr James Hanson.
- 1965 Wellbeck acquisition, bringing in Mr Gordon White.
- 1968 £4.7m acquisition of Butterley, brickmaker.
- 1969 Name change to Hanson Trust.
- 1974 Moves into U.S. with \$20m Seacoast Products acquisition; White takes control of U.S. expansion.
- 1979 Successful £25m bid for Lindstruts, failed \$143m bid for Barber Oil.
- 1980 Agreed \$180m bid for McDonough.
- 1981 Sale of McDonough's concrete and cement businesses for \$49m.
- 1982 Successful \$95m bid for Berco Group, Ever Ready battery maker.
- 1983 Takeover of UDS for £25m; sales of Richard Shops and other UDS subsidiaries for £152m.
- 1984 Successful bid battles for London Brick (£247m) and U.S. industries (\$532m).
- 1985 Failed £147m bid for Powell Duffryn.

But, as Mr Haville would be the first to admit, Hanson Trust has got it right on most occasions so far, with a 21-year history of unbroken profits growth culminating in an 86 per cent increase to £169m pre-tax for the year to last September on a turnover of £2.38bn. This year a further jump is expected, following the announcement last week of interim profits up 85 per cent to £106m.

Hanson now is a company with a broad spread of interests on both sides of the Atlantic—engineering, textiles and building materials are in the portfolio. It has interests in duty-free shops, fast-food distribution, furniture and footwear.

This conglomerate has grown in three distinct phases. In the early years, Lord, then plain Mr James, Hanson rivalled Mr Jim Slater for rapid acquisitions and disposals, building up a steady stock market reputation which plunged in the stock market crisis of 1974.

Hanson Trust, nevertheless, kept profits growing throughout the 1970s, but the market was slow to restore the high price/earnings multiple it had previously enjoyed.

In the UK, the group fought shy of acquisitions, making only one large purchase—Lindstruts in 1979 for £25m.

But U.S. activities more than made up for the lull. In 1973,

Mr Gordon (now Sir Gordon) White went to America to take charge of the group's activities—building up a business which now accounts for two-thirds of the total turnover.

The 1980s mark the third stage of the group's development. The recovery of the U.S. and the UK economies opened up new opportunities, highlighting companies where Hanson could move in quickly and produce rapid results with the help of buoyant markets.

An unprecedentedly strong bull market in London equities stimulated a re-rating of Hanson Trust's share price which allowed the group to use its paper aggressively.

In the UK, the acquisition of Berco, the Ever Ready battery maker, for \$95m, was followed by the hotly-contested purchases of UDS for \$25m and of London Brick for £247m.

Meanwhile in the U.S., the group bought McDonough, the footwear, hand tools and building materials conglomerate, for \$180m, and its biggest acquisition so far, the U.S. Industries manufacturing company for \$532m.

There has been nothing inevitable about Hanson's success. Bid battles have often been bitterly fought, frequently against the entrenched opposition of the existing management. And on occasion, Hanson has lost—most recently pulling out

of a takeover bid for the UK engineering group Powell Duffryn.

Moreover, Hanson works hard to make his companies perform after acquisition—cutting back overheads and staff, and motivational management.

The group has not been free of accusations of asset-stripping, most recently following the acquisition of UDS, which was followed by the sale of a string of UDS subsidiaries, including Richard Shops and John Collier Menswear. By their nature, profits on such deals are one-off contributions to growth.

Nevertheless, shareholders have had little cause to complain. Despite the fact that Hanson's acquisitions have been well marked with share issues, earnings per share have grown strongly—by 40 per cent compound since the group's last rights issue, which raised £2.7m in 1983.

Although Hanson Trust shares fell 11p to 211p yesterday, the City expects the company to retain its premium rating.

Shareholders are being offered one new share at 185p for every six held, and one £1 51½ cumulative convertible preference share for every nine ordinary shares held.

Holders of the company's 8 per cent secured loan stock are offered one convertible preference share for every £11.70 of nominal stock.

What is the biggest call on shareholders' funds ever by a UK company wholly to the private sector, both the ordinary and preference shares are offered partly-paid. There is a down payment on the ordinary by July 4 with the balance due on September 27. The 50p down payment on the preference stock is due on July 4 with the rest due on August 30.

The group plans a 2.7p final dividend for the year to the end of September, making 4.2p (3.35p). The first dividend on the preference shares will be 3.35p.

Dealings in the new ordinary will start on June 12, act in the preference shares on July 9. The issue has been underwritten by merchant bank N. M. Rothschild.

Nurdin and Peacock expects another record

A BUOYANT start to the present year of Nurdin and Peacock, the main dealer Harold Perry, Motors should seek to broaden its activities base so as to produce profits less dependent on one industry. The group's chairman, Mr Macgregor, told the annual meeting, "the annual meeting."

Mr Macgregor said he was unable to report any recent change in the competitive conditions being experienced in the new car market. The group's business is in the sale, repair, service, hire, leasing and financing of new and used motor vehicles and industrial equipment and the supply of replacement parts and petrol.

In order to more accurately reflect the management philosophy, it is proposed to change the name of the company to Perry Group.

Members were told that the group's first move into the field of estate agency was about to take place. The acquisition was a modest one, but it had enabled Perry to set up the management team that would be responsible for developing this new division.

Mr Macgregor said it would be premature to comment on the likely progress of this new activity, but added that the steps taken by the board towards the end of 1984 to improve the

Red Band launch period last year.

Mr Peacock added that the company was involved in other ways of increasing turnover. In 1985 Nurdin and Peacock is planning to launch 175 years of trading and 25 years in cash and carry. Promotions were being held on many of the items it sells and these had had a real impact on sales.

The branch development programme was continuing. The most recent opening was in Gloucester in April and it had made a good start. In the immediate future there were plans for opening a 30,000 sq ft replacement branch in Colchester and a doubling of the size of the Watford branch to 70,000 sq ft.

A 92,000 sq ft branch was due to open in Wolverhampton early next year.

Mr Peacock said that other sites were of an advanced stage of negotiation but it was too early to give details.

Hardanger Properties advances to £420,000

PROGRESS HAS continued at USM-quoted Hardanger Properties in the six months to March 31 1985. Pre-tax profits advanced from £205,000 to £420,000 and the directors are confident that the full year should see a further significant increase over the previous year's £240,000.

Stated mid-year earnings per 10p share were ahead from 2.88p to 3.63p and the net interim dividend is maintained at 2.8p—last year's total payment was 6.8p.

Turnover for the six months showed a marked reduction from £1.55m to £973,000. Tax took £189,000 (£153,000) giving a net balance up from £183,000 to £231,000. The interim dividend absorbs £179,000 (£143,000) leaving £52,000 (£30,000) retained.

Since the annual report, the company has acquired Eyre & Sons and the directors say this acquisition has been absorbed smoothly. Surplus leasehold properties have been disposed of without cost and the freehold properties have been retained as long-term investments.

Harold Perry seeking to broaden activities base

BECAUSE the outlook remained uncertain, it was all the more important that Ford main dealer Harold Perry, Motors should seek to broaden its activities base so as to produce profits less dependent on one industry. The group's chairman, Mr Macgregor, told the annual meeting, "the annual meeting."

Mr Macgregor said he was unable to report any recent change in the competitive conditions being experienced in the new car market. The group's business is in the sale, repair, service, hire, leasing and financing of new and used motor vehicles and industrial equipment and the supply of replacement parts and petrol.

In order to more accurately reflect the management philosophy, it is proposed to change the name of the company to Perry Group.

Members were told that the group's first move into the field of estate agency was about to take place. The acquisition was a modest one, but it had enabled Perry to set up the management team that would be responsible for developing this new division.

Mr Macgregor said it would be premature to comment on the likely progress of this new activity, but added that the steps taken by the board towards the end of 1984 to improve the

group's cash position, would ensure that the necessary finance was available when needed.

While the uncertain outlook for the retail motor industry precluded any positive prediction of full-year profits, the chairman was confident that the group's management team would exploit every opportunity. He was optimistic about the prospects.

In 1984, pre-tax profits improved from £3.4m to £5.51m, on turnover of £132.88m (£122.55m).

Lep Group, the international freight forwarder, said yesterday that its 40 per cent owned U.S. associate, National Guardian Corporation, is to be floated on the American Over-the-Counter market. LEP paid just under £12m last year for its stake in NAG, a central station was alarm business. It said yesterday that it was reasonable to assume that the price of the new shares offered in the flotation would be "considerably higher" than that at which LEP acquired the firm.

The issue will reduce LEP's stake in the enlarged equity to around 30 per cent.

Property & Reversionary Investments PLC

Summary of Results

Year ended 31 March	1985	1984
Profit available for distribution	£2,166,000	£1,828,000

Anglovaal Group

DECLARATION OF ORDINARY AND PARTICIPATING PREFERENCE DIVIDENDS
YEAR ENDING 30 JUNE 1985

Dividends have been declared payable to holders of ordinary, preference and participating preference shares registered in the books of the undermentioned companies at the close of business on 28 June 1985. The dividends have been declared in the currency of the Republic of South Africa. Payments from London will be made in United Kingdom Currency and the date for determining the rate of exchange at which the currency of the Republic will be converted into United Kingdom currency will be 8 July 1985, or such other date as set out in the conditions subject to which the dividends are paid. These conditions can be inspected at the registered office or office of the London Secretaries of the companies. Warrants in payment of the dividends will be posted on or about 2 August 1985. The transfer books and registers of members of the companies will be closed from 29 June to 5 July 1985, both days inclusive. All companies mentioned are incorporated in the Republic of South Africa.

Name of company (ordinary shares, unless indicated otherwise)	Dividend declared (cents per share)	Total for financial year (cents per share)	Consolidated profit (R1000)	Amount absorbed by dividends (R1000)
Anglovaal Limited (Notes 1 & 2)	102	135	117.5	190
Participating preference (Note 2)	79	260	225	360
Ordinary and "A" (Notes 1 & 2)	64	60	50	105
Middle Witwatersrand (Western Areas) Limited (Notes 1 & 2)	26	81	72	122
Sandpan Gold Mining Company Limited				
Consolidated profit figures are after taxation, outside shareholders' income and preference dividends but before extraordinary items.				
1 Post ion-for-one subdivide.				

- Notes:
- The Group has adopted the equity method of accounting for the results of its associated companies and all comparatives have been adjusted accordingly. This method has not been applied to the Group's investment in Frieska Copper Mines (Proprietary) Limited ("Frieska") due to the impending cessation of mining operations. The results for Frieska have been accounted for only to the extent of the dividend received. Members are referred to Frieska's quarterly report which will be published on or about 17 July 1985.
 - This declaration represents 5 cents in respect of the fixed rate of 5 per cent per annum for the half year ending 30 June 1985 and 130 cents, being a 50 per cent participation in the final dividend of 260 cents declared on the ordinary and "A" ordinary shares.
 - Amount absorbed by dividends includes preference dividends.

- Interim dividend 1985 on share capital as enlarged by Rights Issue in December, 1984.
- Seasonal considerations will result in a lower profit in the second six months.

Copies of the full interim Statement can be obtained from The Secretary, Carrs Milling Industries PLC, Stawell, Carlisle, CA9 9BA.

Improved margins boost N. Brown

A GOOD response to all catalogues and brochures enabled N. Brown Investments, the Manchester-based direct mail order group, to lift its profits before tax by 26 per cent during 1984-85.

Furthermore, business for the first three months of the current year has shown an improvement of over 20 per cent. The total turnover for the 52 weeks to March 2 1985 rose from £37.23m to £42.7m, excluding VAT. Pre-tax margins increased by virtually 1 per cent to 10.7 per cent and profits at this level pushed ahead from £3.62m to a record £4.7m—comparisons were for 53 weeks.

Sales from the group's more up-market Heather Valley catalogue were particularly encouraging.

Earnings grew from a stated 16.2p to 20.89p and a final dividend of 10p was declared. The group's 1985 profit per share rose from 16.2p to 20.89p.

Mr David Alliance, the chairman, tells shareholders that the recent acquisition of Country Garden and Country Kitchen, which sells a wide range of garden and kitchen accessories through direct mail catalogues, represents an important extension to the group's mail order range.

Mr Alan Dean, appointed chief executive early this year, says the directors are satisfied that they can develop a range of products and financial services, including personal loans, which will be attractive to both existing and new customers.

Over the past 18 months the group has been marketing personal loans to a number of customers and the results have been "encouraging".

He adds that continued investment in computing will improve customer service and enable the directors to make maximum use of the extensive data base for marketing purposes.

Pre-tax profits include income from listed investments amounting to £94,000, against £78,000—the comparative figures were after exceptional provisions of £173,000.

Tax accounted for £1.98m (£1.58m) to leave net profits of £661,000 up from £2.59m. There were extraordinary charges of £41,000 (£12,000).

The directors say they are committed to expanding the group, both by organic growth and by acquisition.

DRI first quarter profits advance

DRI Holdings, an independent designer and manufacturer of computer peripherals, has announced a first quarter profit of £1.8m for the three months ended March 31 1985, representing an increase of 151 per cent on the same period last year.

Sales were up 12 per cent to £21.8m. Group managing director Mr John Armstrong said that while they were not as good as he would have liked to have seen, when judged against the performance of other companies in the industry, he believes they are satisfactory.

During the first quarter, DRI disposed of its remaining holding in Decision Data Computer Corporation, providing proceeds of nearly £5m. Bank borrowings have been reduced despite repaying the National Enterprise Board the final £2m due under the terms of the privatisation of the group. DRI's profit on the sale of DRI was approximately £4.3m.

Palma Group

At the annual meeting of Palma Group, manufacturer and distributor of leisure products, Mr Peter Bailey, the chairman, told shareholders that trading results for the second half of 1984 were better than for the first half but he said that the results for 1985 would be good, and perhaps very good.

In the absence of unusual circumstances the directors intended to recommend a same again 0.79p interim dividend for the current year.

UK COMPANY NEWS

Property & Reversionary advances 42% to £2.56m

ON THE back of a 23.6 per cent rise in net rental income Property & Reversionary Investments increased its profits before tax from £1.5m to £2.56m over the year to March 31 1985, an increase of 42 per cent.

For the opening six months, to end-September 1984, profits showed an improvement from £880,000 to £1,085m. In his interim report Mr A. Rubens, the chairman, told shareholders that the increase reflected recent rent reviews and new lettings which would produce a further advance in the second half.

For the full year net rental income pushed ahead from £2.8m to £3.28m—the group is principally engaged in property investment and development.

Earnings per share improved by 1.3p to 8p and a final dividend of 2.56p (2.7p) raises the net total from 3.7p to 4.1p.

Tax accounted for £380,000 (£144,000) to leave net profits of £2.17m (£1,141,000). Minority interests took £1,000 (added £177,000) and extraordinary credits rose from £12,000 to £420,000. The profit after such credits amounted to £2.59m (£1,585m).

A valuation of the group's properties shows an increase of

BOARD MEETINGS

The following companies have notified dates of board meetings to the Stock Exchange. Such meetings are usually held for the purpose of considering dividends. Official indications are not available as to whether the dividends are interim or final and the sub-divisions shown below are based mainly on last year's timetable.

Exco sees comfortable increase in first half

RESULTS of Exco International for the first half of the current year should comfortably exceed those for the same period of 1984, Mr John Sangster, the chairman, told the annual meeting. The group's main sources of profit continued to be Telerate and money broking.

In 1984, Exco boasted pre-tax profits from £22.46m to £28.97m, on turnover of £210.66m (£24.06m). For the half year to June 30, 1985 the company made £33.15m, on £73.5m turnover.

The company continued to retain significant cash balances. This liquidity and the unutilised borrowing capacity available to the group, meant it was well poised to take advantage of any new opportunities, without recourse to shareholders.

Mr John Sangster, the chief executive, said the group was still looking for new acquisitions in the UK and U.S. and given the current moves on deregulation, there was plenty of scope for him to name a specific acquisition target.

Asked about reports of a poor performance by Exco's Gartmore Investment Management subsidiary, Mr Sangster said the problem was not a big one and that Gartmore's record was quite good.

Further growth on way for Cluff Oil

At the annual meeting of Cluff Oil, the chairman Mr Alvy Cluff, said he expected 1985 to maintain another improvement with sharply increasing income from the U.S. and Zimbabwe.

His principle concern was the reduction of interest, but a detailed investigation into that was under way.

Gold mining was producing "particularly gratifying" results with gross cash flow of some £2m, annually, and a life of around seven years.

In China the company had established a trading operation which had secured various exclusive arrangements with two major ports.

In Ohio, two wells drilled recently by Cluff had produced a 54 per cent return on investment. A further two wells, in which the company had a 30 per cent interest, had also just been successfully drilled.

These two latest wells, the chairman expected, would contribute an additional \$25,000 per month when they come on stream in about 90 days' time.

Duncan Lawrie

Duncan Lawrie, the licensed deposit taker and licensed dealer for securities, has increased its issued share capital from £5m to £8m, to allow it to expand its private banking and financial management services.

COMPANY NEWS IN BRIEF

Dorset Resources has entered an agreement to acquire British held by Tinto Holdings Canada and Olympia & York Holdings Corporation, in return for ordinary and preference shares in Dorset Resources.

Tinto Holdings Canada, a wholly-owned subsidiary of Rio Tinto-Zinc Corporation, will acquire 5 per cent of the issued ordinary shares of Dorset Resources.

Aggregate value of the consideration is less than 1 per cent of the net assets of the Rio Tinto-Zinc Corporation.

At the annual meeting of I. J. Dewhurst Holdings, the clothing manufacturer whose principal customer is Marks & Spencer, shareholders were painted a picture of growth and encouraging prospects.

Chairman Mr Alistair Dewhurst reported progress in the first half to July 19, with sales expected to show an increase from £19.45m to over £24m, and profit before tax moving ahead from £1.83m to £2.2m.

Prospects for the full year at the end of July

APPOINTMENTS

Earl Jellicoe Dr. Graham Roper

Top Davy posts announced

Lord Jellicoe has been appointed to the Board of DAVY CORPORATION and elected deputy chairman from July 1. He will succeed the present chairman, Mr. Peter Benson, when he retires at the annual meeting on October 2.

Dr. Graham Roper has been appointed chief executive of Davy Corporation from July 1. Lord Jellicoe is at present chairman of the British Overseas Trade Board and a director of S. G. Warburg, Hambly Holdings, Tate and Lyle, Smiths Industries and Morgan Crucible. Dr. Roper joined Davy in 1980 and is a deputy chairman of Davy Corporation and managing director of Davy McKee, engineering and construction division of Davy.

DAVY PUBLIC RELATIONS, Shrewsbury, Mr. Love, who is one of the agency's principals, has acquired the business from the parent company's initial information, at which he will continue to be a director.

NEEDLER HEALTH, Lloyd's insurance brokers, has appointed Mr. P. A. Greenwood and Mr. T. W. Parkes as directors; Mr. P. A. Greenwood an executive director of Needler Health (overseas) and Needler Health (Marine); and Mr. P. A. Greenwood an executive director of both companies. Following the formation of Needler Health Kinmonth (Aviation) Mr. C. E. Bradshaw has been appointed chairman, Mr. A. C. Kingsworth, managing director and Mr. T. W. Parkes, a director. Mr. M. A. Goisane has been appointed an associate director. Mr. P. A. Greenwood has joined the group and been appointed an associate director of Needler Health (overseas).

Mr. G. E. Hall and Mr. C. Michael Hughes have resigned from the COUNCIL OF FOREIGN BONDHOLDERS, The London Chamber of Commerce and Industry has appointed Mr. G. C. Nichols in the council to replace Mr. Hughes.

Mr. David Bailey and Mr. Simon Woodroffe have been appointed directors of HAMBRIS BANK.

Dr. Robin Brooks, formerly with Glaxo, has joined VISMED as a director, with special responsibility for developing applications of information technology.

Mr. W. T. White has been appointed to the board of HAWKER SIDDELEY DYNAMICS ENGINEERING as production director.

Mr. Arthur Davy, former director-general of the Institute of Export, chief executive of the World Trade Centre and Commonwealth Secretariat adviser to foreign governments on overseas trade has returned to the field of imports and exports. He has been appointed director of the UNITED KINGDOM TRADE AGENCY, which helps developing countries to promote exports. It currently operates as a department of the London Chamber of Commerce and Industry and is funded by the Overseas Development Administration of the Foreign Office.

Mr. David Rix has been appointed managing director of London office of ANCA NETHERLANDS B.V.

Mr. G. L. Williams has been appointed to the board of GLAXO INSURANCE CO., a Bass subsidiary, as a non-executive director.

Mr. R. B. M. Hurley has joined the AUTOMOBILE ASSOCIATION and will become its director, insurance. Mr. Hurley was previously with the SENTRY (UK) Insurance Co.

FURBES PUBLICATIONS has appointed Mrs. Marie Jennings to the board as development director. She was head of the information unit of the Unit Trust Association.

BANK OF SCOTLAND has appointed Mr. A. W. Mallos as a member of the bank's London local board. He has been a partner of Blandford & May, solicitors, since 1957.

Mr. Bill Stead has been appointed managing director of COMPASS VENDING, a member of the Grand Metropolitan group. Mr. Stead has been a partner of Antony Ward Lewis, who has taken another appointment with Compass Services. Mr. Stead has been marketing director of Grandnet International Services.

Mr. Julian Bray has joined EXTEL PUBLIC RELATIONS financial division as an account director. For the past two years he was consultant/director with KIL Publicity.

M. EIDER'S FINANCE UK operations have been made. Mr. David Warrington, previously an area director with Rufford Williamson and Co., has been appointed as marketing director. Mr. Fred Grunwell, formerly chief accountant with Royal Bank of Canada and group financial controller, Mr. David Wilford, previously with Morgan Grenfell, has been appointed credit administration director.

Mr. John White has been appointed London senior regional partner for a five-year term from October 1 at PENT MARKWICK.

Mr. Peter Love has been appointed chairman and managing director of IMPACT INFORMA-

Sun Alliance chairman

Following the retirement of Lord Aldington, chairman of Sun Alliance, deputy chairman, Mr. H. U. A. Lambert has been elected chairman of the holding company, SUN ALLIANCE AND ORTHEN INSURANCE, and of its principal subsidiaries. Sir Derrick Holden-Brown becomes deputy chairman and the Earl of Epsom, Lord Balfour continues as vice chairman.

Mr. David Vevers has been appointed to the position of PRUDENTIAL CORPORATION. He joins from J. Rothschild Holdings (formerly Parthenousa J. Rothschild) for whom he was director of communications. Prior to that he was head of public relations for The Charterhouse Group. Mr. Vevers takes his new appointment on July 8.

Mr. G. B. Deveson has retired as group managing director of THE SENIOR ENGINEERING GROUP. Mr. D. D. McFarlane, previously group financial director, has been appointed group managing director.

Mr. Alfred Rabens, who has been a director of PROPERTY & REVISIONARY INVESTMENTS since 1957 and chairman since 1981, will retire as chairman following the annual meeting on July 9 and has agreed to become president. His nephew, Mr. Kenneth David Rabens, who has been managing director since 1982, will take his place as chairman. Mr. Michael J. Brilling and Mr. Walter James Preston have joined the board. Mr. Brilling is a partner in H. L. & G. Rubens and Mr. Preston is a senior partner in Jones Lang Wootton.

Mr. Duncan J. MacLeod, has been appointed deputy chairman of the SCOTTISH PROVIDENT INSTITUTION. He succeeds Professor Ian G. Stewart, who has completed the normal period of office.

RIGHTS OFFER

ISSUE OF PROFIT-SHARING CERTIFICATES
By virtue of the authority granted at the Annual General Meeting of the Company held on 18th May, 1985, the Board of Management has decided to issue DM425,000,000 nominal Profit-Sharing Certificates. The Profit-Sharing Certificates are being offered at par by way of rights to the Company's shareholders on the basis of:
One DM100 nominal Profit-Sharing Certificate for every four shares of DM50 nominal held.

The Profit-Sharing Certificates are being offered on the terms of the Company's announcement dated June 1985 in which the rights attaching to the Profit-Sharing Certificates are set out in full. Copies of the announcement with an English translation, are available on request at the office of the London Paying Agent, S.G. Warburg & Co. Ltd.

It is not intended to seek quotation for the Profit-Sharing Certificates on The Stock Exchange, London.

PROCEDURE IN THE UNITED KINGDOM

Holders in the United Kingdom wishing to take up rights must lodge the following:-

Bearer Share Certificates—Coupon No. 44
London Deposit Certificates for marking—Square No. 7
and apply during the subscription period 11th June, 1985 to 20th June, 1985 inclusive, at the offices of the London Paying Agent, S.G. Warburg & Co. Ltd., 2nd Department, 33 King William Street, London, EC4R 9AS

between 10.00am and 3.30pm, where lodgement forms are obtainable.

Payment must be made in full on application. Temporary Receipts will be issued.

Holders wishing to make payment in Sterling should agree the applicable rate of exchange with the London Paying Agent.

Subscribers will be advised at a later date when the Profit-Sharing Certificates are available to be exchanged for Temporary Receipts.

BLYVDORUITZICHT GOLD MINING COMPANY, LIMITED
NOTICE is hereby given that dividend of 75 c per share has been declared in South African currency, as a final dividend in respect of the year ending 30 June, 1985, payable to the members whose names appear in the company's register of members at the close of business on 28 June, 1985. The register of members will be closed from 29 June, 1985 to 1 July, 1985, inclusive, and dividend warrants will be issued on or about 1 August, 1985.

The rate of exchange at which the dividend will be converted into United Kingdom currency for payment by the United Kingdom Registrars, Transfer and Paying Agents will be the telegraphic transfer rate of exchange between Johannesburg and London ruling on the first business day after 29 June, 1985, on which foreign currency dealings are transacted. Where applicable, South African non-resident shareholders 15% of 15% will be deducted from the dividend.

The full conditions of payment of this dividend may be inspected at or obtained from the offices of the company in Johannesburg or at the United Kingdom Registrars.

DURBAN ROODEPOORT DEEP, LIMITED
EAST RAND PROPRIETARY MINES, LIMITED
The boards of directors of the above companies have decided not to declare dividends for the half-year ending 30 June, 1985.

TECHNOLOGY

EDITED BY ALAN CANE

The thinking automobile prepares to take to the road

IN THE car of tomorrow, the driver can almost take a back seat.

Computers will be able to change gear, adjust the heating, turn on the lights and perform many other tasks.

Under the bonnet, many mechanical systems will disappear and a microcomputer will continuously tune the engine, adjust the suspension and monitor the exhaust to prevent pollution.

The volume-produced car that can think will appear all the quicker with the setting up by General Motors of a \$12.5m European Technical Centre in Luxembourg.

The centre will operate as an independent business unit within the corporation and will offer its services to all Europe's car makers.

It will develop computer systems for engine management, emission control, transmission management, suspension control, instrumentation and air conditioning. Such systems, integrated so as to be able to "talk" to each other, will probably be in European cars within the next year or two.

A 50-strong team will be able to draw on technology already developed in the U.S. by AC Spark Plug, three Delco companies and other divisions in the GM Electrical Components Group.

Much emphasis is being placed on integration at the Centre—the process of making the various car systems communicate to produce the best overall result.

According to Mr Edvard Czapor, vice president in charge of the Electrical Components Group, there has so far been no serious regard for how the parts fit into the whole. "Today we must view the entire vehicle's fight to make Europe fall in

as an entity," he says.

This means, for example, that an electronic ignition system should not be designed without considering the design of the fuel injection system, since the provision of a spark at the right moment and the delivery of the fuel and air mixture are part of the same problem. Gear ratio and the demand being made by the driver are similarly related while at the same time—in the U.S. at any rate—exhaust emissions have to be minimised.

It was U.S. emission control standards imposed 10 years ago that provided GM with the incentive to put a microcomputer in each of its vehicles. It also

line with U.S. standards, except perhaps for larger cars.

But lead-free petrol—a prerequisite for efficient emission control according to the GM specialist—seems unlikely to be available in the EEC within four years.

So the Luxembourg centre might seem something of a gamble.

On the other hand, computer control can improve performance and fuel economy, and is already in use in high quality expensive European cars.

In addition GM has formidable experience of vehicle computers and has even sold vehicle electronics to Suzuki. "If we can sell to Japan we

can sell anywhere," claims Mr Czapor.

In Indiana and Wisconsin, GM's Delco Electronics division, with offshore plants in Mexico and Singapore, is a major computer and silicon chip manufacturer in its own right. It has been using surface mounted components on its printed circuit boards for nearly three years.

In most parts of the electronics industry itself—apart from the military contractors and some computer majors—the idea is still in its infancy. GM has also had to develop chips that survive under a car bonnet, where heat

and vibration call for near-military specifications.

Operations of the microcomputer in principle is simple. Input signals are derived from sensors that measure speeds, pressures, flows, driver demands and other variables. The present design can handle up to 512 variables.

The digital processor, programmed to suit the particular engine/vehicle combination, makes split-second calculations and provides outputs that control fuel, air, ignition and other variables to give best operation of the vehicle.

Far from creating a maintenance nightmare, the computer in fact makes life rather easier for garages according to Mr Richard Kerruish, manager of electronics development at the centre.

Because the computer is constantly monitoring both itself and the operation of the vehicle (against a pre-determined calibration), it can immediately signal to the driver if a problem is developing with a "check engine" dashboard light. This same display shows diagnostic codes to the service engineer who then knows what actions to take.

The engine management computer is able to communicate over a data-link to other computers that may be in the car, and with assembly line diagnostic computers that allow assembly errors or faulty components to be detected before the vehicle goes to the customer.

Future work will be aimed at integrating gear shift with engine management. Later, Kerruish expects to achieve an electronic integration and control level that will eliminate most of the controls not concerned with immediate driver demand.

Why the euphoria over satellite television may be misplaced

PEOPLE in the U.S. last year spent nearly twice as much on cable television for their entertainment viewing as they did at the cinema box office.

With statistics like that from the land of liberalised television, it is easy to understand why cable TV has been the big white hope of the media business in Britain. And why the recently announced relaxation of satellite TV reception regulations has caused a wave of euphoria in the business.

The new rules will allow anyone to apply for licences to receive, via dish aerials, satellite transmissions from programme suppliers as Screen Sport, Sky Channel and the Premiere movie channel. More significantly, licences will be available in hotels and blocks of flats—the so-called satellite master antenna television systems (SMATV).

Such installations, with large dishes aimed at the low-powered satellites now used for relaying cable signals, differ from the planned direct broadcasting by satellite (DBS) services causing such a dilemma for the BBC, ITV and others. DBS relies on more expensive, high-powered satellites so that individual homes can receive adequate signals on smaller and relatively cheaper dish aerials.

A larger SMATV installation may cost a hotel anything from £2,500 to £10,000, but Thorn EMI's new Galaxy Television will be offering leasing arrangements—a welcome extension to the ailing TV rental business. Other companies moving in to supply hotels and apartment blocks include Sat-Tel, which is stepping up production from 100 satellite receivers per month to 500. Master Antenna Systems (Rentals) and Megastat—a market leader in dish aerials which is even offering systems for the domestic viewer to put in his

garden for between £1,200 and £1,700.

The easing of restrictions still leaves, however, quite a few hurdles for the aspiring hotel operator or the householder who wants to keep ahead of the Joneses. Apart from the licences and cable authority approval, planning permission may be needed for the siting of the dish.

With only 650 hotels in the UK with more than 100 rooms, the initial market is hardly

huge, although apartments and clubs will extend the opportunity.

In any event, the assumption that satellite and cable viewing is the future growth area for programme suppliers could be wrong. Hollywood's revenue from pay cable viewers in the U.S. last year grew only 6 per cent, against almost 30 per cent growth in video revenue. Some 21 per cent of the world revenue for feature films now comes from the home video market, according to one American study—and this market is still far from reaching a plateau.

Even more significant, the National Video Corporation—a major producer of opera and ballet programmes—now reckons its revenue from video

is about to equal its income from television sales. This surprising statistic underlines another point that some in the media business are beginning to take seriously—that the mainstay of the movie business, the feature film, is losing out to other kinds of material.

Further evidence of this comes from the rapid growth of music video. It has four cable channels in the U.S. and is becoming a major industry in the UK, where some video technical facilities houses now rely on pop music productions for most of their work.

Industrial and management training has already demonstrated the potential for minority audiences paying high prices. When the first British-made commercial training films appeared in the 1960s, few believed this would become a significant industry.

Companies such as Rank and Video Arts have shown otherwise, and now it seems that everyone is making films and video programmes for the training market.

Cost and audience profiles are now over-riding considerations. The vicious paradox is that as methods of distributing moving pictures proliferate, the demand for quantity increases as the audience becomes fragmented and smaller.

But with the means of reaching the right audiences now available, the specialist producers are discovering something generally denied to broad-caster: the cinema give way to for what they want to see, tired of being offered an abundance of free programming over which they have little or no control.

The next few years may thus see the mass appeal of broadcasting and the cinema give way to the selective appeal of satellite, cable and video—but with video in a better position to offer almost infinite choice at a premium price.

Video & Film

Airlines hit by volcano nuisance

THE ERUPTION of two volcanoes in North America in 1980 and 1982 has proved to be a nuisance for airlines on the North Atlantic route and a money earner for a small West Midlands company.

The debris from the eruption of Mount St Helens in Washington State and El Chichón in Mexico is still in the upper atmosphere, and is likely to remain there for some time.

It has resulted in damage to airlines' paintwork and rapid deterioration to the optical finish on acrylic plastic passenger windows, which have to be removed and polished more frequently. Previously, this was done every 15,000 to 20,000 hours but must now be carried out about every 2,000.

Harper Canning, a Birmingham finishing company, is now selling an increasing number of Uniflex polishing systems, one of which is used by British Airways.

Outer windows are first abraded on the grinder to remove crazing, scratching and other marks, then polished on the Uniflex to restore clarity.

This has replaced hand-processing methods on the thousands of windows handled at Heathrow. They are now polished automatically on a conveyor system.

Harper Canning says the scratches are a safety hazard, since they can develop into stress cracks unless removed.

Baking a better pie

MANUFACTURERS of pies, pizzas, sausage rolls and Cornish pasties can improve quality and increase throughput with a new food processing machine built by Rijkaart of Asperen, Holland.

Called a Multi Trio Laminator and Sheeter, the machine takes a block of laminated dough and, acting like a massive rolling pin, reduces it to the correct thickness.

According to the makers, it does this by carrying the block up to and under a revolving drum consisting of 12 stainless steel rollers which revolve against the direction in which the block is travelling.

The rollers press the block or dough onto a second stainless steel roller, revolving in the same direction of travel as the pastry.

The machine can be built for a working width of between 200 and 1200 mm and will reduce pastry to a tenth of its original size. The machine's gentle handling properties guarantee excellent baking results, the makers say.

Norsk Data

Systems that perform for you

... from The Norwegian Super Mini Computer Company.

COMPUTER CLASSICS

The trouble with some computers is that they're really best as solo performers, whereas what today's business needs is computers that will happily perform with mainframe, minis and micro from different manufacturers.

Norsk Data can work in harmony with virtually any make and size of computer.

Whether it's across the room or a pole the world.

Using National and International standards and manufacturers' protocols like SNA, X25 or CDS.

But then, as Europe's most sophisticated computer company, we have a habit of

introducing classic new ideas that catch on.

To find out more about our performance telephone 01-223 3026 now, for our information pack and seminar dates.

Norsk Data Ltd, 100, The Quadrant, Newbury, Berkshire RG14 5U.

Behind every successful businessman, there's an efficient bank.

And behind more and more efficient banks, there's Hogan Systems.

Hogan Systems.

Providers of the world's most sophisticated flexible and proven software. To banks, finance and investment houses, Building Societies. To anyone, in short, who needs information for better decision-making in today's competitive financial environment.

FT COMMERCIAL LAW REPORTS

English jurisdiction supported by option to sue in the U.S.

STOLT ARGOBAY
Court of Appeal (Lord Justice Ackner, Lord Justice Robert Goff and Lord Justice Browne-Wilkinson); May 23 1985

A NEW YORK sublease clause inserted into an insurance policy merely confers an option to sue in New York and does not in itself indicate that U.S. law is the law of the contract; and if the contract is governed by English law in that it is most closely connected with England a further contract made in Italy expressed to be in the same terms is also, by implication, governed by English law.

The Court of Appeal so held allowing an appeal by Cantieri Navali Riuniti, Sprit Ship Repairer and assignee of an insurance claim, from Mr Justice Mustill's decision setting aside leave to serve a writ out of the jurisdiction on Italian insurers, Unione Mediterranea di Sicurtà and Compagnie Assicuratrice di Milano.

Under rule 1 of the Rules of the Supreme Court (RSC) provides: "(1) service of a writ out of the jurisdiction is permissible with the leave of the court if: (a) the claim is brought to enforce a contract which (i) was made within the jurisdiction, or (ii) is, by English law, or (e) the claim is brought in respect of a breach committed within the jurisdiction."

Lord Justice Robert Goff said that during 1978 Cantieri carried out substantial repairs to a ship called the Stolt Argobay, formerly Stolt Argobay.

The repairs cost about \$3m. Cantieri and the owners contended that the damage was caused by insured perils, namely heavy weather and crew negligence. The owners did not have the financial resources to pay for the work so they assigned to Cantieri a substantial proportion of their insurance claim.

In the present proceedings the claim was by Cantieri as assignee against Italian insurers who had underwritten 10.58 per cent of the risk.

The insurance was handled by London brokers, Crow Dalton Lambert (now being wound up). Forty-four insurers had been named as bearing varying proportions of the risk. Of the first four named three at least (Fenton Insurance, Walbrook Insurance and Drake Insurance) were English companies.

Having obtained 14.5 per cent cover from the first four companies, Crow Dalton Lambert

appeared to have obtained the remainder from insurance companies overseas, through placing brokers.

The Italian insurers were approached by Italian brokers and the offer was made and accepted in Italy. There was no dispute that the contracts were made in Italy.

The policy, being in the Lloyd's SG form, was expressed to have been subscribed in London. Attached to it was a document setting out the terms of the insurance.

It read: "All terms, clauses, wordings and conditions as in the policy issued by Fenton Insurance... for the identical subject matter and period."

The conditions were made subject to the American Institute Hull clauses and other clauses, including clauses incorporated by Crow Dalton Lambert ("CDL" clauses).

The policy included a New York sublease clause which provided: "The place of actual and physical issue and delivery of this policy in London. Nevertheless, at the option of the assured, it shall be considered New York and all matters arising hereunder shall be determined in accordance with American law and practice. Any suit may be brought... within the U.S. ... Final judgment against the insurers may be enforced in any other jurisdiction including Great Britain."

At the bottom of the document was printed "All claims to be collected through Crow Dalton Lambert."

In September 1983 the Italian insurers started proceedings in Italy claiming a declaration that they were not bound by the policy on the ground of misrepresentation. In December Cantieri was granted leave to serve a writ on the insurers out of the jurisdiction.

Mr Justice Neill gave leave. On November 20 1984 Mr Justice Mustill ordered that leave be set aside. Cantieri appealed.

The question was whether the case fell within Order 11 rule 1.

(1) The place where the contract was made. Cantieri submitted that having regard to the opening words of the New York sublease clause ("the place of... issue and delivery... is London"), either the parties had agreed the contract was deemed to have been made in London; or the provision gave rise to an estoppel by convention whereby the insurers were estopped from contending otherwise.

There was no substance in either submission. The words did not provide that the place of

making the contract should be deemed to be London; they simply recorded that place of issue and delivery was London.

Also, there was no common assumption of fact or law to found the basis of any estoppel by convention.

It followed that the case did not come within Order 11 rule 1 on the ground that the contracts were made within the jurisdiction.

(2) Governing law. Cantieri contended that the contracts were governed by English law.

Mr Justice Mustill held that the Lloyd's SG form had been made redundant by the American Institute Hull clauses; and that there was no need to construe the policy on the basis of the Fenton policy in that the incorporated clauses were identical to those in the Fenton policy.

The proper law of the Fenton policy must be considered. The insurers have agreed to "all terms wordings and conditions" as in that policy.

The contract with Fenton must have been made in London. To do otherwise would be to attribute to the insurers a notice to insurers that the terms to be found in clauses published by American institutions.

These clauses were the most important of the conditions subject to which the insurance was written, but they contained no express reference to U.S. law.

Other conditions were not so important, but they had been introduced by London brokers and had no American flavour.

Furthermore, the New York sublease clause was the nearest thing to a choice of law clause.

The clause was intended to provide a means by which the parties could decide that all matters arising should be decided in accordance with American law. It appeared therefore that the option to choose the law of the United States was intended to be exercised.

It followed that Cantieri failed to establish a good arguable case on that point.

There must be a strong likelihood that if the insurers pursued the point that part of the damage to the ship was not caused by insured perils, other underwriters would take the same point.

If so, all the claims should be dealt with in one jurisdiction. English law was the most appropriate forum. The appeal should be allowed.

Lord Justice Ackner and Lord Justice Browne-Wilkinson agreed.

For Cantieri: Jonathan Golsman (Richards Butler and Co.). For the Italian insurers: John Milligan (Clyde and Co.).

CONTRACTS

Singapore cable job for Pirelli Construction

Last October PIRELLI CONSTRUCTION, principal installation organisation of Pirelli UK, won a £7m contract from Pirelli, France, for the installation of 66,000 volt cables and 12,000 volt cables in Singapore. Now in association with Societa Cavi Pirelli, Italy, a further order has been obtained, the installation of which is valued at £4.5m.

The contract was won by Societa Cavi Pirelli through Cebexport and is for the supply and installation of a super-tension power cable for the island of Pulau Seraya and the 250,000 volt cables of Singapore on mainland Singapore. The cables, which will be manufactured by Societa Cavi Pirelli of Milan, are of the single core aluminium sheath and 2000 mm copper conductor and corrugated aluminium sheath. Installation started early next year with completion due early in 1987.

The Central Computer Service of the Greater London Council has placed a £100,000 order for a VAX/VMS DEC 486 computer system. The system consists of two VAX/VMS 486s, a 3033 and a 3081. It is believed to be the first electrostatic colour plotter in the UK to run on VAX/VMS software. The VAX/VMS plotter will be linked to one of the largest CADAM systems in the world. The Central Computer Service has 450 staff offering expertise in all aspects of computing in support of a wide range of facilities for the GLC and its constituent boroughs.

The software branch's group supports not only CADAM, but a variety of packages which use three series 8000 Versatec monochrome plotters used as a central resource. The colour electrostatic plotter will produce composite drawings on which the use of colour enables differentiation between the types of information.

Over the first three months of 1985, STC TELECOMMUNICATIONS has won orders worth £1.5m for its wide area radio-pagers made in Northern Ireland. In the UK, orders have been received from British Telecom and others. The company has also been gained from Hong Kong, New Zealand, Middle East, Sweden and the U.S. The STC Major Call is a small "beeper" which enables the user to stay in touch while away from work or home. Four different and distinct "beeps" tell the user which location requires to be contacted. Major Call also has a memory that will store incoming calls. In this mode a red attention light will continue to flash until all calls have been acknowledged.

Orders worth £750,000 have been received for the STC Tele-Call, a credit authorisation terminal designed to combat

Dollar strength continues

Eurodollars ease

economic data before Thursday, the market tended to switch attention to the overnight Federal funds rate but again found little inspiration as funds opened within the recent trading range.

Sterling-based instruments tended to mirror the performance of the pound although three-month sterling deposits were more affected by developments in U.S. interest rates. The September contract closed at \$8.27 down from an opening of \$8.30 and Friday's close of \$8.39 while the long gilt for September delivery finished at 110.05 down from 110.10 and the short still down from 110.10 on Friday.

12.46%*

- At least 80% of the Fund's assets must be invested in obligations backed by the full faith and credit of the U.S. Government or guaranteed by its agencies. The balance of the Fund's assets may be invested in high quality money market instruments. Currently, 100% of the Fund's assets are in U.S. Treasury Securities.
- Monthly Dividends.
- Minimum initial investment of only \$1,000 and \$500 thereafter.
- Shares redeemed any business day without charge.
- Available for personal accounts, retirees, IRA's, Keogh's, Pension and Profit Sharing Plans.
- * Current distribution is computed by annualising the total dividends from net investment income and distributions of net realised short-term capital gains from option transactions for the three month period from March 1 through May 31. That figure is then divided by the offering price as of June 1, the ex-dividend date for May. Future distributions will vary because of changes in the Fund's income and offering prices.

UK rates firmer on

Interest rates were a little firmer in London yesterday mainly in reaction to Friday's U.S. unemployment figures which postponed the prospect of an early cut in the U.S. discount rate. While hopes of a cut in UK clearing bank base rates remain, the timetable appears to have been set back, possibly until after this month's Opec

A take up of Treasury bills together draining \$874m and the unwinding of previous sale and repurchase agreements a further \$560m. In addition banks brought forward balances \$50m below target. These were partly offset by Exchequer transactions which added \$350m and a fall in the note circulation of \$300m. Assistance in the morning

totalled £332m and comprised purchases of £43m of eligible bank bills in band 1 (up to 14 days) at 12½ per cent, £48m in band 2 (15-33 days) at 12½ per cent, £96m in band 3 (34-63 days) at 12½ per cent and £145m in band 4 (64-81 days) at 12 per cent.

The forecast was later revised to a shortage of around £550m,

before taking into account earlier help and the Bank's additional assistance in the afternoon of £39m compared with £20m of purchases of £20m of bank bills in band 1 at 1 per cent, £72m in band 2 at 1 per cent and £7m in band 3 at 2½ per cent. Late assistance came to £35m, making a total of £466m.

UK clearing banks have
lending rate 124.121 per cent

since April 19

£ WORLD VALUE OF THE POUND

The table below gives the latest available rate of exchange for the pound against various currencies on June 10, 1985. In some cases rate is nominal. Market rates are the average of buying and selling rates except where they are shown to be otherwise. In some cases market rates have been calculated from those of foreign currencies to which they are tied.

WORLD STOCK MARKETS FINANCIAL TIMES

WALL STREET

Job worries cast cloud of uncertainty

THE LATEST statistics on unemployment in the U.S. cast a new cloud of uncertainty over Wall Street's hopes of a cut in the Federal Reserve discount rate yesterday, bringing a downward trend in bond prices and an unsettled picture in equities, writes Terry Byland in New York.

Some analysts believe the increased unemployment in the non-farm sector may have undermined prospects for another cut in discount rate, although others think the Fed is still anxious to stimulate the economy.

At 3pm the Dow Jones industrial average was 2.13 down at 1,315.52. After an uncertain start, the bond market began to extend the sharp falls recorded on Friday, after the announcement of the unemployment statistics.

In the stock market, the indications that U.S. industry may be turning stronger were seen as a bull sign. But the weakness in bonds encouraged further profit-taking in stocks on the back of the strong rise in the market at the beginning of last week.

Profit-taking in both airline and railroad issues brought a sharp fall in the Dow transportation average.

Among interest sensitive stocks, utilities turned lower in response to the about-turn in rates in the bond market. The money centre banks, with their cost

of funds no longer falling in the money markets, also eased. Manufacturers Hanover, at \$38½ was down \$½, J. P. Morgan, at \$52 was \$1 lower. BankAmerica was \$½ off at \$19½ ahead of a Federal bank regulators meeting which could bring a down-grading of Argentine debt rating. This would require increased reserves by the bank.

But regional banks moved higher after a Supreme Court ruling which significantly strengthens prospects for interstate banking plans. Prominent was Sun Bank of Florida, which is in the process of merging with Trust Co of Georgia. Sun Bank jumped \$3½ to \$39, while Trust Co. at \$36½ fell \$1½. Wachovia at \$38½ gained \$½ but Barnett Banks of Florida at \$40½ lost \$½.

The much-battered technology sector struggled to rally, but the Dow Average was depressed by a dip of \$½ to 1,317 in IBM. Also lower was Digital Equipment, IBM's nearest rival in data processing, with a \$½ fall at \$97½. In a subdued personal computer sector Apple shaded by \$½ to \$18½.

Also softer was General Motors, \$½ easier at \$74½ as investors absorbed the details of the \$5bn acquisition of Hughes Aircraft. Dole, having lost out in the contest for Hughes, dipped \$1½ to \$¾ after disclosing that it is considering other defence industry acquisitions.

Other defence stocks also turned easier on the prospect that the Hughes sale means a period of infighting for an industry already beset with cost scandals. General Dynamics dipped by \$½ to \$73½, McDonnell Douglas shed \$½ to \$78½, and Lockheed at \$50½ was \$½ down.

In the airline sector, TWA held unchanged at \$19½ as Wall Street awaited a statement from Resorts International, believed to be acting the white knight which will fend off Mr Carl Icahn.

United, still labouring under the strike by the pilots, jumped by \$1½ to \$53½ at

ter announcing plans to "recapture" \$960m from an overfunded pension scheme. But the other airline issues were out of favour, with Pan American dipping \$¼ to \$8½ as profits were taken after the recent upswing in the stock price.

The disarray in the world oil industry after cuts in British North Sea oil brought mixed views on oil stocks. Most of the majors shaded lower but some investors took the view that the slide in Exxon's stock price was unjustified, and the stock rebounded by \$1½ to \$51½, although trading was not heavy.

In the credit markets, turnover was sluggish, with traders cautious ahead of the day's traditional auction of Treasury bills. This week, \$14bn three and six-month bills are on the block, and current rates are the lowest for five years. T-Bill rates edged higher in the market, extending Friday's trend.

The bond market was helped by a steadier tone in bond futures and managed to rally from the lowest levels. At mid-session, prices were no more than a shade below Friday's closing levels.

THE RAPID growth since the beginning of this year in the number of companies traded in the Nasdaq national market system (NMS) of quoted stocks has prompted a more selective approach to listings to be included in the Financial Times from today.

The accelerated pace of growth of NMS stocks is the result of an agreement reached last November between the National Association of Securities Dealers and the Securities and Exchange Commission on requirements for listing.

While higher financial criteria were set for companies wishing to be listed, the necessity for minimum trading volume of 100,000 shares a month was lifted. During 1984, membership of the NMS grew from 882 to 1,080 companies. In the wake of the November decision, growth has been more dramatic with a total of 1,933 companies listed by the end of last month.

This compared with 1,539 companies quoted by the NYSE at the end of April and 785 on the American Stock Exchange.

The value of shares traded on the Nasdaq system rose from \$71bn in 1981 to \$153bn last year - \$114bn on the NMS - and is projected by Nasdaq to rise to between \$175bn and \$200bn this year. By comparison, the value of shares traded on the New York Stock Exchange rose from \$399bn in 1981 to \$764bn last year.

To reflect the relative importance of the three markets, the Nasdaq listing is to be limited to the top 1,000 companies, as measured by market capitalisation and trading volume. The Amex listing is to be limited to a selection of leading stocks, while NYSE listings are unchanged.

EUROPE

Rate jitters set peaks trembling

INTEREST RATE jitters and profit-taking knocked prices off their peak levels during trading in Frankfurt yesterday. With foreign investors sidelined, shares eased throughout the day, although price movements were kept between generally narrow boundaries and turnover was relatively light.

The Commerzbank index fell 6.8 to 1,356.6, biting into last Friday's 27.6 climb to a record 1,383.5.

Declines were heaviest among sectors which led last week's rally such as banking, chemical and automotive groups, as investors chose to profit from last week's rise.

Daimler-Benz led motor stocks lower with a DM 9 fall to DM 809, while Volkswagen slipped DM 3.40 to DM 274.60 and Porsche DM 7 to DM 1,243.

The U.S.-inspired concern about the possibility of higher interest rates had most effect on the banking and insurance sectors, which have also been carried forward recently by the market's broad strength.

Among the largest falls, Deutsche eased DM 5 to DM 547, Commerzbank DM 6.50 to DM 265 and Dresdner DM 6

The Sydney Stock Exchange was closed because of a national holiday.

to DM 227.50. Allianz was the largest loser among insurance stocks, closing down DM 30 to DM 1,290.

Bonds closed easier in thin trading following the U.S. dollar's firmer tone. The Bundesbank bought DM 28m worth of domestic paper after selling DM 39.4m on Friday.

Selling also surfaced in Amsterdam, halting a run of record advances in the banking and insurance sectors.

Among the banks most affected by profit-taking, ABN was down Fl 5.50 at Fl 452.00, while NMB lost Fl 2 to Fl 191.50 and Amro shed 90 cents to Fl 80.40.

International stocks were under pressure throughout the day. Royal Dutch/Shell was hit again amid continuing expectation of a cut in the official oil price and finished Fl 2.40 lower at Fl 193.50. Unilever was off 70 cents at Fl 348.50.

A retreat developed during trading in Zurich, as investors cut into last week's increases.

Leading industrial issues felt the brunt of the selling. Ciba-Geigy fell SwFr 45 to SwFr 3,185, Nestlé SwFr 35 to SwFr 8,270 and Sandoz SwFr 100 to SwFr 8,400.

In the banks, UBS eased SwFr 25 to SwFr 3,980, Bank Corp SwFr 5 to SwFr 407 and Swiss Volksbank SwFr 15 to SwFr 1,570.

Interest rate considerations weighed heavy on investors' minds in Brussels and the market closed broadly lower after the recent rise.

Electrical holding group Tractiennel fell BFr 178 to BFr 3,685 and Electrobel was down BFr 110 to BFr 8,500. Wagon Lit continued to decline, closing BFr 120 lower at BFr 3,400.

Trading remained thin in Paris with sellers holding a marginal advantage for most of the session.

The automotive sector was weaker with Peugeot FFr 22 lower at FFr 402 and Michelin off FFr 29 at FFr 1,051.

Foreign and local institutional support pushed share prices higher in Milan in advance of the outcome of the nation's wages referendum. The Banca Commerciale index added 2.63 at 314.30 compared with its high for the year of 320.01.

Weakness persisted in Madrid, with most bank stocks losing ground in thin trading.

Few major industrial stocks moved in Stockholm during quiet pre-holiday trading. Electrolux firmed a further SKr 2 to SKr 282.

TOKYO

Sanctuary sought on sidelines

THE DECLINE on Wall Street last Friday drove investors to the sidelines in Tokyo yesterday and sent share prices lower for the first time for five trading days, writes Shigeo Nishiwaki of Fuji Press.

Large-capital issues such as Mitsubishi Heavy Industries and asset-heavy stocks, which had led the recent bullish market, lost ground under heavy profit-taking.

The Nikkei-Dow market average shed 33.25 points from the previous week to close at 12,683.34. Trading was slow at 348.11m shares, well down from last Fri-

day's 911.94m. Losses outnumbered advances by a narrow margin of 414 to 460, with 141 issues unchanged.

The market had performed well for a couple of weeks as large-capital ship-buildings, steels and electric powers attracted strong buying interest. Investors had hoped that falling U.S. interest rates might prompt the Federal Reserve Board to cut the official discount rate again, which would bring down interest rates in Japan. However, that hope faded when long-term U.S. bond prices dropped on Friday.

Hit by a wave of small-lot selling, Mitsubishi Heavy Industries fell Y8 to Y298 and topped the active list as 10.13m shares changed hands. Nippon Steel, the second busiest issue with 8.02m shares, declined Y3 to Y155. Tokyo Electric Power lost Y50 to Y2,100 and Tokyo Gas Y8 to Y228.

Nippon Yusen, which had been popular on expectations for government deregulation, dipped Y11 to Y208. Property and transport stocks were lower. Mitsubishi Estate lost Y13 to Y785, Nippon Express Y15 to Y424 and Tobu Railway Y7 to Y343. Construction and housing also eased, with Obayashi dropping Y14 to Y325.

Some blue chips came into favour towards the close. TDK added Y170 to Y4,720, Pioneer Y60 to Y1,900, Sony Y30 to Y4,090 and Hitachi Y15 to Y730. Nevertheless, trading volume of those blue-chip issues was slim, except for Mitsubishi Electric. It was the 10th busiest stock, with 4.43m shares traded as it rose Y7 to Y387. Investment trust buying helped blue chips to gain ground.

Some securities companies moved up on small-lot foreign buying. Nomura Securities jumped Y20 to Y1,210, with foreign buying orders for around 1m shares. Nikko Securities gained Y30 to Y780 and Yamaichi Y4 to Y782.

Bond prices weakened as investors were discouraged by the probability that the Federal Reserve Board would fail to cut the discount rate again in the immediate future. The yield on the 7.3 per cent government bonds maturing in December 1993 rose only slightly from Friday's 6.505 per cent to 6.520 per cent.

CANADA

A FURTHER sharp decline developed during trading in Toronto, with turnover again high.

Among the most heavily traded losers, Royal Bank traded C\$½ lower at C\$30½, Inco was C\$½ down at C\$19, Noranda C\$½ off at C\$15½ and Dome Mines eased C\$½ to C\$10½.

Energy issues stocks were generally easier with Texaco C\$½ down at C\$32½. Business was light in Montreal with stocks generally lower.

FINANCIAL TIMES SURVEY

UNITED STATES

FINANCE AND INVESTMENT

THE RAW power of American capitalism has rarely displayed itself more effectively than in 1984. The U.S. economy grew at its fastest pace for more than 20 years, 3m new jobs were created, and the U.S. dollar was propelled to record highs by a wave of foreign confidence in the U.S. system.

A great deal of this buoyancy has flowed over into 1985. Since the start of the year the major stock market indices have hit new peaks on several occasions. U.S. interest rates have sunk to cyclical lows and in the corporate sector last year's unprecedented merger boom has continued unabated.

This performance in the face of still sluggish recovery elsewhere in the world has proved a near-irresistible attraction for foreign investors and exporters alike. In a very real sense the dynamism of the U.S. economy has pulled along the rest of the world and done a lot to lessen the immediate dangers of the Third World debt crisis.

Yet today the ability of this locomotive to maintain its own momentum, let alone haul along the rest of the international community, is being increasingly questioned. Even as the Dow Jones industrial average burst through the 1300 level for the first time ever last month, some Wall Street pundits began warning of the risks of recession and deflation.

Indeed, whole sectors of the U.S. economy have been depressed by last year's 6.9 per cent increase in real gross national product. Energy and agriculture, which account for a much larger slice of the U.S. economy than some foreigners realise, remain deeply depressed. Farmland prices have dropped by more than a quarter from their 1981 peak and the crisis in the energy sector has bruised the reputations of most of the high flying energy banks.

Elsewhere large sectors of manufacturing industry have

The ability of the U.S. economic locomotive to maintain its own momentum, let alone haul along the rest of the international community, is being called into question. The Reagan Administration is basing its economic strategy on proposals for sweeping tax reforms and a progressive reduction in the country's near \$200bn federal budget deficit. To achieve this it will need a certain amount of goodwill in Congress. Wall Street and the rest of the world will be paying more than usual attention to the political manoeuvrings in Washington over the coming months.

Battle to engineer a soft landing

BY OUR NEW YORK STAFF

been severely hurt by the dollar and a flood of cheap imports. The share of imports in total business spending on durable equipment jumped nearly 30 per cent to reach almost a quarter of the total last year. Despite the recent sharp drop in the value of the dollar, it is still trading some 14 per cent higher against the D-Mark than it was twelve months ago.

In the financial sector, last summer's near collapse of Continental Illinois Bank, the nation's eighth largest banking group, has been followed by the rescue of Financial Corporation of America, parent of the country's biggest savings bank which lost nearly \$600m last year.

The subsequent runs on dozens of smaller savings banks across the U.S. underlines the fact that some parts of the U.S. financial system are, in a sur-

prisingly fragile state for this stage in an economic recovery. There are a number of factors behind this apparently paradoxical mixture of high confidence in the U.S. economic system and the severe plight of some of its constituent parts.

Perhaps the most important of these is the way deregulation has swept through the U.S. in the last few years establishing new competitive ground rules across whole fields of industry, services and the financial sector. The change in the rules has inevitably had a widely mixed effect as companies adjust to their new situation.

On the positive side, deregulation has unleashed a more entrepreneurial atmosphere in which innovation and inventiveness have flourished.

Among the industries which have responded most vigorously to this new environment have

been the airlines and transportation, banking and financial services, and telecommunications. Energy deregulation has led to massive restructuring, new names and radically new ways of doing business.

In the financial services industry the new ground rules have spawned a flood of innovative products. Among these are an increasingly wide range of tradable paper, including such hybrids as collateralised mortgage obligations (CMOs), which represent a repackaging of previously illiquid home mortgage loans, and certificates of automobile receivables (CARS), which at the end of the day are nothing more than old-fashioned car loans. The sale of mortgage backed securities, for example, more than tripled to over \$60bn between 1981 and 1984.

On exchanges from New York

to Chicago and Philadelphia, the hottest financial instruments around are new stock index futures, currency options and other financial futures whose trading volume often overshadows activity in the underlying cash markets.

Many of these new products have grown into multi-billion dollar markets almost overnight. According to Mr Gerald Corrigan, the new president of the Federal Reserve Bank of New York, the market in interest rate swaps which "hardly existed a few years ago" now exceeds \$100bn.

But to the extent that these changes have created the opportunity for higher rewards, they have also led to a significant increase in the potential risk. In the airlines the new competition has already bankrupted some familiar names and brought others to their knees.

In the booming bond market the collapse of several small Government securities dealers earlier this year has demonstrated the strains of allowing the markets to expand so rapidly and with the minimum official surveillance.

For example, no one expected that the closure of ESM Government Securities, a small Florida bond dealer, would result in a massive run on a hundred small savings banks a thousand miles north in Ohio. But perhaps the greatest paradox today is the strength of the U.S. currency. On the one hand the dollar's buoyancy reflects foreign investors' eagerness to participate in the U.S. economy and enjoy the high real returns on their investment. Last year's \$71bn net capital inflow was more than double the 1983 figure, and represented about a quarter of the pool of savings available to finance net investment and the Government deficit.

On the other hand, the over

President Ronald Reagan

In making changes to the tax code, Congress will need to be sensitive to effects this may have on the economy. There is a risk that, should reforms simply end up as another tax cut, much effort already expended in reducing the U.S. budget deficit could be wasted.

U.S. Capitol building, home of Congress

Disagreement on implications of tax reform

BY STEWART FLEMING

PRESIDENT Ronald Reagan has injected a new element of uncertainty into the U.S. economic outlook with his plans for a far-reaching reform of the U.S. tax code.

There is widespread disagreement among the experts about the economic implications of the blueprint which the President presented to the country last month.

The differing interpretations are all the more difficult to disentangle because nobody can be sure yet which bits of the reform proposal will be approved by Congress and which will be felled in the crossfire from hired guns paid to lobby against specific proposals. As Republican Richard Gephardt, a leading tax reform advocate, puts it the U.S. is about to witness "the biggest political brawl" Washington has ever seen.

To compound the problem of assessing the economic implications of what is being proposed, there is the incalculable impact on economic activity of the added uncertainty itself. Will companies rush ahead with new investment plans in order to avail themselves of existing tax breaks or has the "windfall" tax on companies designed to prevent them profiting from the

transition to the reformed tax system blocked off this opportunity? Will consumers respond to the fog surrounding their own tax positions by holding back from purchases?

There are no firm answers to these questions either. What is clear, however, is that large sectors of manufacturing industry and the property sector, the strongest and the weakest areas of economic activity at the moment, are the biggest prospective losers from the tax reform proposal, and that the proposal has been laid on the legislative table at a time when the U.S. economy has run out of steam and could well be poised on the edge of a mild recession.

In 1983 the U.S. economy under the impact of easier money and an expansionary fiscal policy positively shot out of the starting blocks, leaving the recession at the beginning of the decade as only a fast fading memory.

Real economic growth in 1984 hit 6.8 per cent, unemployment dropped to just over 7 per cent as over 7m Americans found jobs. Inflation, helped by a strong dollar, rising productivity and low wage settlements, held steady at the 4 per cent

mark to which it had retreated in 1982.

In the campaign leading up to his sweeping re-election triumph in November 1984, President Ronald Reagan was able to take credit for the economic expansion. But even in the months before Americans gave him a second term, the signs of trouble ahead were clearly on the horizon.

In the third quarter of 1984 real economic growth slumped to an annual rate of just under 2 per cent. A mild rebound in the fourth quarter coupled with virtual stagnation in the first quarter of 1985, when real economic growth hit only 0.7 per cent, has confirmed that the vigorous expansionary phase of the cyclical upswing is now over, and recessionary tendencies are gaining the upper hand.

The most visible of these is the fast deterioration in the import and exporting sectors of the economy. Between 1983 and 1984 the U.S. trade deficit almost doubled, rising from \$70bn to a new world record high of \$123bn.

The weakness in the traded goods sector has largely accounted for the slower growth of the economy since the third

quarter of 1984. Industrial production has been flat since the early summer of last year and employment in manufacturing industry has ceased to rise. Employment gains are now coming almost entirely from the service sectors and construction.

The surge in imports has been the vehicle through which the U.S. expansion has been transported overseas. Up to half the economic growth experienced in industrial countries over the past two years has been due to increased exports to the U.S. Many developing countries' improved economic performance owes much to increased exports to the U.S.

But there are now serious doubts about whether this trend can continue. Most U.S. economists are still hoping that in the second quarter growth will rebound and the second half of the year will see a more vigorous expansion. They base these projections partly on the belief that the drag of the export sector on the economy will diminish and the decline in interest rates which the Federal Reserve Board (Fed) has held to a minimum.

However the contrary view is that with manufacturing accounting for about 25 per cent of gross national product, cor-

porate profits under pressure, capital spending plans being revised downwards and personal income growth slowing at a time when consumer debt burdens are becoming a problem, the weakness in sectors such as the manufacturing, farming and mining sectors will slowly sap the economy's vitality.

On this view the Federal Reserve's monetary stimulation, since it may not bring the value of the dollar down significantly, will only add to the distortions in the economy, partly by reviving domestic demand, much of which will be siphoned off abroad in the form of increased imports.

With inflation still subdued the Fed seems to have some room to encourage interest rates to decline even though the narrow measure of the money supply M1 is outside its target range so far this year. It may also be drawing some encouragement from the fact that Congress could be on the verge of making significant progress in cutting the \$200bn plus federal budget deficit.

The House of Representatives and the Senate will be spending part of the summer trying to resolve differences between their plans for cutting up to \$300m off the deficit between

1986 and 1988.

Most economists see progress in reducing the deficit as vital if America's excessive demands on international savings are to be reduced and if the U.S. is to find an alternative path to the see it is currently following with the economy buffeted by an overvalued dollar, a dramatic plunge in the value of which could unleash new inflationary forces and drive interest rates dramatically higher again.

It is not just heavily indebted developing countries, but also hard pressed U.S. financial institutions which live in horror of another surge in interest rates.

Tossing an unpredictable and far reaching tax reform into this already unstable situation could be dangerous. But it is politics, not economics, which is driving President Reagan's tax reform plan.

In making changes in the tax code, however, the Congress needs to be sensitive to the economic implications of what it is doing. There is a considerable risk that tax reform could end up as just another tax cut. Were that to happen, much of the effort already expended cutting the budget deficit could be wasted.

Damage done by soaring imports

The Dollar
STEWART FLEMING

DURING the first Reagan administration the extraordinary surge in the international value of the dollar was seen by senior administration officials as a symbol of the vitality of the U.S. economy and of the confidence which President Ronald Reagan had inspired in the political as well as the economic future of the U.S.

Officials were quick to stress the "safe haven" dimension to the dollar's strength. They were quick to contrast the vitality of the American expansion with the weakness of the economies of other industrial countries—particularly in Europe which is seen to be suffering from "Euroclerosis" an economic malaise easier to recognise than to treat.

When attention was drawn to the pressures the strong dollar was putting on manufacturing companies who were finding it hard to compete with foreign producers both in their domestic as well as international markets, the benefits of a strong dollar were stressed.

The dollar's strength had helped to curb inflation. It was putting pressure on U.S. companies to improve the efficiency of their operations so that when

the dollar did eventually decline they would be even more formidable competitors overseas.

President Reagan, asked earlier this year about the high dollar responded that he certainly did not want a weaker dollar, what he wanted was stronger currencies overseas.

It was a formulation which implicitly called on the industrial partners of the U.S. to solve their economic problems while denying that there was anything wrong with U.S. economic policy which contributed to the dollar's strength. But even as the President was sticking to this line in public, the pressures on the Administration to give a higher priority to the distortions and dislocations in the manufacturing sector, stemming from an overvalued dollar, were increasing.

It came as a shock to many economists, and even more to many industrialists, when the Federal Reserve Board (Fed) eased monetary policy sharply in the latter months of 1984. But the dollar, rather than declining, strengthened.

Then the Commerce Department's data for the first quarter gross national product (GNP) exposed just how much damage the dollar's strength is doing to the economy. Largely because of the weakness of U.S. exports and the surge in imports, real growth virtually petered out.

Mr Fred Bergsten, a former senior U.S. Treasury official,

describes the problems associated with the strength of the dollar, the huge budget deficit and the rapidly growing current account deficit as an explosive potentially in its way as the debt crisis which hit developing countries in 1982 and 1983.

The strong dollar is not just accelerating a process of industrial change in smokestack industries in the U.S., a real deindustrialisation, it is beginning with high technology companies being hit by foreign imports.

The U.S. has become a net debtor nation which means that in time its current account deficit will become larger than its trade deficit, as rising interest payments to foreign investors throws the services as well as the trade balance into deficit.

The International Monetary Fund (IMF) has warned that unless the current account deficit—expected to hit almost \$100bn this year—is tackled soon, by 1990 it could become self-perpetuating.

Domestically the political response to jobs being siphoned off overseas has been the beginning of an even more virulent protectionist backlash. In Europe some opposition parties are beginning to suggest that the time has come to control capital exports to the United States—a response which is the mirror image of the trade protectionism in the U.S.

The threat that unless the

imbalances in U.S. economic policies are corrected the dollar could suffer a "crash landing" are perceived to be increasing, although few are brave enough to put a timing on the turning point.

What is clearer, however, is that American policymakers, not just in the Federal Reserve but also in the Treasury, are now profoundly concerned about the value of the dollar. Deputy Treasury Secretary Mr Richard Darman told a television interviewer earlier this month that he would like to see the dollar decline.

Perhaps the most vivid expression of Administration concern came in May when, out of the blue, President Reagan conducted a dramatic about turn on budget policy, conceding no increase in defence spending in real terms in order to help Senate Republicans pass a budget resolution.

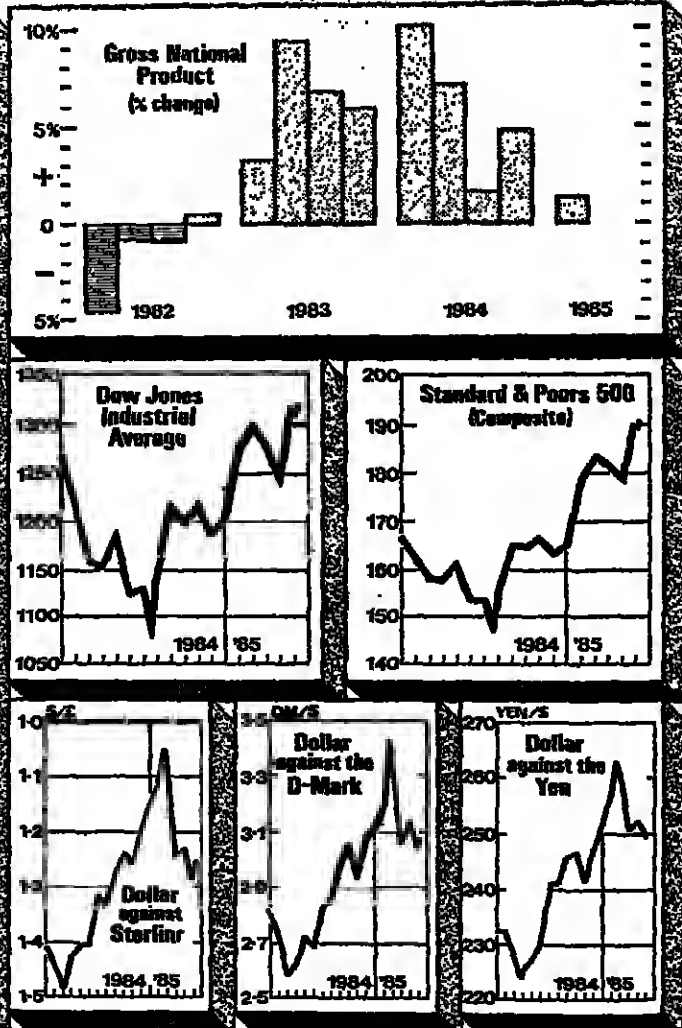

The Administration has also been pressing its industrial partners to stimulate the economy in the hope that this too will help to correct the overvaluation of the dollar. Even the President's tax reform plan, by reducing the profitability of U.S. investments, would, if it were enacted in the form Mr Reagan has proposed, tend to make the dollar a less attractive currency.

The Federal Reserve Board too is signalling its concern about the dollar's overvaluation. In a speech in New York in May, Governor Henry Wallich said that the exchange rate of the dollar has gained weight as a factor in the formulation of monetary policy.

The cut in the Fed's discount rate in May was linked explicitly with the dollar's strength. Indirectly too, with its expression of concern about the industrial sector, the Fed in its statement explaining the cut in the discount rate to 7 1/2 per cent indicated that the problem of the dollar was a major factor behind the shift to an easier monetary policy stance.

Mr David Hale, an economist with Kemper Financial Service is one of many U.S. economists who have concluded that the long bull market in the dollar is over. "The magic circle of strong growth and low inflation, financed by large capital inflows and a strong dollar, is eroding under the pressure of import penetration," Mr Hale says.

But whether or not the dollar correction can be accomplished without provoking new shocks to the economies of the U.S. other industrial countries and the developing world is a question which cannot be answered with any certainty. One most hopeful sign would be convincing action in the conference committee of the House and the Senate on the budget resolution this month.

Battle to engineer soft landing

CONTINUED FROM
PAGE 1

valued dollar is causing untold problems for large sectors of U.S. manufacturing industry. The \$107bn U.S. trade deficit in 1984 bears witness to the havoc wrought by the flood of imports.

Only last month, Mr Bob Anderson, chairman of Atlantic Richfield, the sixth biggest U.S. oil company, said that many of the operations and plants which his company was closing in the U.S. would be "profitable operations almost anywhere else in the world."

Like Mr Anderson, the leaders of many other U.S. industrial giants are complaining bitterly about the restructuring which is being forced upon them. Nevertheless, there are some who concede that a shakeout in U.S. industry was long overdue. They point to the concessions made by the higher

paid union members and the shedding of obsolescent capacity in many of the elder industries as the sorts of adjustments where the U.S. is ahead of Europe.

Where managements have failed to adapt to the new competitive environment, they have left the door open for an increasingly confident band of corporate raiders whose financial message has attracted a strong following on Wall Street.

The promise of the raiders to bring a better performance out of a target company's assets base partly explains the merger mania which has swept across America over the past year and a half. Yet, as with any fashionable trend, the positive aspect of the financial boom has its dangerous side as well.

There are those like Felix Rohatyn of Lazard Freres and Co who argue the flood of junk paper to fund the hectic merger wave, coupled with the frenzied cunning in the financial mar-

kets has already led to a serious deterioration in the quality of financial assets.

Some economists argue that the dual strain of the increased amount of low quality paper in the corporate sector combined with the soaring U.S. Government borrowing requirement could be a recipe for disaster. The doomsday scenario envisages a major financial collapse plunging the U.S. and the world into deep recession.

In contrast to this cataclysmic picture, the U.S. administration believes that all these problems are soluble with good will in Congress and sound management in Washington.

Its strategy, as mapped out by President Reagan in the past few months, is based on a combination of the most sweeping proposed tax reforms since the last war, and a progressive reduction in its near \$200bn federal budget deficit.

Like the administration the U.S. Federal Reserve now appears determined not to let

the U.S. slip into recession even if this puts its monetary targets at risk.

In a series of aggressive easing moves, the U.S. monetary authorities have brought this discount rate down to its lowest level for six and a half years, sending other U.S. short-term rates plunging and igniting a three-month-old rally in the bond markets.

Yet, despite the action of the Fed, most people believe that U.S. real interest rates still remain exceptionally high, that the U.S. dollar remains chronically overvalued, and the U.S. budget deficit is running at an unsustainable level.

The Federal Reserve Bank of New York argues in its latest annual report that a reduction of all three is crucial if the U.S. and the world is to engineer a soft economic landing.

Wall Street and the world will be paying more than usual attention to the political manoeuvrings in Washington over the coming months.

How Morgan helps multinationals succeed in the United States

Officers in Morgan's European and Canadian Corporate Banking Department regularly discuss market developments. Shown in New York, from left, are: Harjo Roosen, Kimberly Perkins, Robert von Tobien, Edmond Carton, Seija Hurskainen. Standing: Harvey Struthers, John Comfort, and William Holding, department head.

For U.K. and European multinationals competing in the United States, Morgan offers clearcut advantages over other banks.

We have a special group of bankers in New York whose sole purpose is to meet the needs throughout the U.S. of European and Canadian multinationals and their U.S. subsidiaries. Few banks have groups with this specific focus.

These specialists know banking in the U.K., Europe, Canada, and the U.S. Most have served in Morgan offices around the world. Each concentrates on specific countries, works closely with our offices in those countries, and often travels to meet clients at their headquarters. With their knowledge and experience, and the backup of a worldwide network of Morgan experts, our European corporate bankers offer multinationals a broad

array of services, both credit and non-credit.

☐ We apply a range of innovative techniques, such as cross currency swaps and private placements, to accommodate your financing needs—for expansion, for acquisitions, for specialised projects.

☐ Our knowledge of tax laws in the U.K., Europe, Canada, and the U.S. helps us structure financings that are highly tax-efficient.

☐ We specialise in tax-exempt financing through industrial revenue bonds as well as variable-rate demand instruments.

☐ We can help establish your commercial paper program in the U.S. Our integrated in-house services include paper issue, placement, ratings advice, backstop facilities, and swapping the proceeds into other currencies for use elsewhere.

☐ We use the most timely, cost-effective

and tax-efficient methods of moving corporate funds, country to country, division to division.

☐ Our European corporate bankers work closely with other Morgan teams that make mergers and acquisitions work. Our financial analysts monitor industry trends, identify promising sectors, and find companies that match client requirements. Then our M&A specialists negotiate deals that take advantage of the tax positions of both buyer and seller.

☐ For clients interested in the divestiture of a subsidiary or division, we find qualified buyers in the U.S. and elsewhere.

To learn more about how this special banking group can meet your needs in the U.S. market, consult any Morgan office. Or you can write to European and Canadian Corporate Banking, Morgan Guaranty Trust Company, 23 Wall Street, New York, NY 10015.

In a bullish frame of mind

Wall St. Firms
TERRY BYLAND

THE WALL STREET securities houses, like the equity market itself, are emerging from a difficult trading period and facing the second half of 1985 in a bullish frame of mind. Results for the first quarter showed a positive recovery from the mauling suffered last year, when the industry's after-tax return on equity dropped to

7.2 per cent, its lowest level for eight years. Now, with both equity market turnover rising strongly and investment banking activity fuelled by substantial new issue raisings, the outlook for the securities houses is bright.

The industry can expect to benefit significantly if long-term interest rates are indeed headed downwards. However, the divisions between the wholesale firms, which aim to increase their handling and institutional links and the retail brokerage houses which are more closely tied to equity market turnover, has increased and is likely to continue increasing.

The battle with the discount brokers, which once seemed a mortal threat to Merrill Lynch and the other full-line brokers, is settling down. Market studies have suggested that trades are better executed at full-service rates and that retail brokers may be better off leaving the very small customer to the banks, which act as feeders for the discount brokers.

At the same time, the much-publicised deterioration in institutional rates appears to have slackened, as the major portfolio managers also realise that third party brokers have limited appeal for them.

Commission income, however, is likely to be down again in the second quarter of the year. Retail investors were cautious in April and most of May, and market volume was around 13 per cent under first quarter totals.

Under these circumstances, some retail brokers are finding profit margins under pressure as their clients sit on their hands, or put their money into short-term money market instruments. When business recovers, it seems likely to concentrate itself even more in the hands of the big retail houses, like Merrill Lynch.

The New York houses have geared themselves up strongly for this business.

Thus, while Wall Street believes that its own profits will show a substantial recovery this year, it does not believe that the jam will be spread evenly. The strongest members of the industry are expected to make the best progress over the next two years.

First Boston, Merrill Lynch and Paine-Webber are all tipped to turn in substantial profit gains this year and next.

A blurring of demarcation lines

Futures/Options

BARRY RILEY

AN AMAZING proliferation of new products is pouring out of America's futures and options exchanges. At the same time, many of the nation's traditional stock exchanges are moving into this explosive growth area, setting up offshore trading in futures and options, which often have no connection with the stocks and bonds normally traded on these markets.

Exchanges all want the ability to trade everything," points out Mr. Tom Donovan, chairman of the biggest U.S. futures exchange, the Chicago Board of Trade (CBOT). "There's a blurring of the lines today."

The turmoil in the markets is putting pressure on the two relevant U.S. regulatory agencies, the Commodity Futures Trading Commission (CFTC) and the Securities and Exchange Commission (SEC).

Although several years ago the heads of the two Commissions attempted to divide up the grey area between their two jurisdictions through the so-called Shad-Johnson accord, the markets are rapidly moving in a direction which threatens to render the regulatory framework obsolete.

An example of the top-survey developments in the industry is that the Chicago Board Options Exchange (CBOE) has applied for recognition by the CFTC so that it can trade commodity-type contracts (though it has its roots primarily on financial contracts

of a kind regulated by the CFTC).

Mr. Riley, in charge of options trading at the NYSE, is ready for the scrap. "The history of these rival contracts has been that a year later nearly 100 per cent of the order flow is at one market or the other," he says. "It's going to be a very interesting test-tube experiment."

But new opportunities opened up in this way by the regulators are fairly rare. More commonly, the markets have to generate their own ideas for new contracts. It was a search that took the Chicago futures markets, the CBOE and the Chicago Mercantile Exchange, explosively into financial contracts in the 1970s.

Tom Coleman, of the CBOE's economic analysis department, has the responsibility for developing new contracts. "Prior to 1970 the idea of new product development in the futures industry was the launching of one new product a decade," he says.

But he points to a remarkable acceleration through the 1970s and 1980s. "It looks now as though we may be accelerating into a new period in the last year when we have developed and launched more like five to ten products each year."

He suggests that one reason is that the spread of futures contracts out of the commodities areas has exposed more people to their potential benefits and generated a broader interest.

"There's a lot of hedgeable risk out there," he comments. His opposite number at the CME is Mr. Paul Burik, whose current submissions for approval by the CFTC include contracts based on ECUs, an OTC stock index and zero coupon bonds.

petition in a few months time.

Like others in the industry

he is now weighing up the potential of contracts which reflect economic risk—quantity contracts rather than the price-based contracts which have been familiar up to now.

"It's an entirely new arena. That may be the next frontier," he speculates.

So far, however, the big Chicago markets have left it to the New York exchanges to experiment in this area. Thus the Coffee Sugar and Cocoa Exchange is about to launch a CFTC futures contract designed as an inflation hedge based upon the official Consumer Price Index for wage earners.

The CSCE's senior vice-president, Mr. James Rowe, says that his exchange has been seeking to produce a facility where people can hedge economic risk. The index was chosen after studies of over 25 alternative measures of economic activity including statistics such as housing starts and car production.

The hope is that the investment industry will be able to use the contract to formulate savings products which offer a guaranteed real interest rate which is not otherwise obtainable in the U.S.

Rival market analysts, however, are sceptical of the possibility of running an active market when the index is only produced once a month. "You can't hedge in a market that doesn't trade," a Chicago observer comments.

The need to launch new contracts such as the CPI-W arises partly from the weakness of many more traditional types of business. The sugar futures market, for example, has gone into serious decline, and agricultural and metals contracts

have also been suffering from the appearance of chronic surpluses in basic materials.

On the CME (Chicago Mercantile Exchange), for example, volume in agricultural futures in calendar 1984 fell by anywhere between 15 per cent in live cattle to 49 per cent in feeder cattle. But overall there was growth of some 15 per cent because of swelling business in financial futures and options on futures.

For the first four months of 1985, CME volume climbed by more than a fifth and the rather bigger CBOT showed growth of just over a tenth—making 25.3m contracts in January-April against the CME's 18.3m.

Nevertheless, trading conditions are said to be such that market professionals are being squeezed.

Now thoughts are turning to developing the international possibilities of futures and options trading. The Philadelphia Exchange, with its thriving business in traded currency options, has linked with the London Stock Exchange and the aim is to achieve "fungibility" which means that a position established in one market can be unwound in the other.

Such a relationship has already been forged between the CME and the Singapore futures exchange SIMEX. But officials at the CBOT dismiss the CME-SIMEX deal as being "very expensive."

The CBOT is moving in a quite different direction, with the objective of using its existing facilities to provide a service for foreigners in their own daylight hours. If grabbing more business outside sales on to the night shift, Chicago will do it.

Compare the advantages of a central location before you decide.

Nebraska's central location provides quick, easy access to anywhere in the continental U.S. In fact, we're only one day by truck from major market centers serving a heartland market of over 50 million customers. This ideal location, combined with some of America's most productive, cost-efficient labor, low energy costs, and a quality of lifestyle,

will put you in a better position to profit. Before you decide where to locate your next U.S. plant, compare Nebraska to the alternatives.

Promise of even greater price volatility

Credit Markets

PAUL TAYLOR

OVER THE past year the pace of innovation in Wall Street's capital markets has reached fever pitch. The investment banking community has spawned new products at a bewildering pace, driven by a wave of inventiveness which shows no signs of abating.

The need to innovate in response to competitive pressures and a changing—more international—market place has become such that some bankers are themselves beginning to question the wisdom of such helter-skelter product generation.

Among Wall Street's recent creations are a slew of strange-sounding products like "CATS," "TIGRS," "CMOs" and "CARS," many based on previously illiquid assets, together with interest rate swaps, junk bonds and a whole host of financial futures, options and index instruments.

Even the U.S. Government, faced with the need to fund a \$200bn-plus deficit, has got in on the act. In the wake of last year's repeal of withholding tax for overseas investors it has launched a series of bond-style targeted notes, aimed at foreigners, and introduced its own officially sanctioned stripped-down zero coupon Treasury securities through its "Strips" programme.

Competition within the market place has resulted in the emergence of major new products and markets which did not exist a few years ago. For example, collateralised mortgage obligations (CMOs) represent the "securitisation" of mortgage loans which were not previously tradeable. Since First Boston pioneered the CMO in June 1983 the market has grown to around \$20bn.

The success of CMOs has in turn led to the creation of

other new securities such as Certificates of Car Receivables (CARs), launched privately in February through a deal between Marine, Midland and Salomon Brothers, and publicly last month.

In January when the Treasury launched its "Strips" programme—allowing the separate trading of selected bonds and interest payment coupons through the electronic book entry wire system—it was taking a leaf out of Wall Street's book.

Salomon Brothers' stripped down zero-coupon Certificates of Accrual on Treasury Securities (CATS) and Merrill Lynch's Treasury Investment Growth Receipts (TIGRS) became almost overnight hits after their launch in August 1983.

Over the past two years the markets have swallowed over \$50bn in Treasury paper repackaged this way. Recently the Chicago Board of Trade announced plans to trade zero-coupon Treasury bond futures.

Other examples of credit market innovation include interest rate swaps, which revolve around the ability of one borrower to raise funds in one market more cheaply than in another, and the commercial paper market, once open only to the highest rated corporate borrowers.

The U.S. commercial paper market exploded from a \$15bn market in 1980 to over \$200bn in outstandings today. But the rapid expansion of some of these markets has already exposed the potential dangers of a market at the loosely monitored fringes.

Nowhere is this more apparent than in the booming Government bond market. On an average day the trading volume of the major bond issues alone in the U.S. totals \$60bn, up from just \$25bn four years ago.

When two small Government bond dealers, ESM Government Securities and Revell, Bresler and Schuman Asset Management, failed earlier this year the repercussions were felt throughout the financial system.

Both had been active in the complex Government bond repurchase and reverse repurchase market.

As a result there have been renewed Congressional calls for closer supervision of these markets. Already the Fed has announced new voluntary capital adequacy guidelines for Government securities dealers aimed at encouraging more conservative management of risk.

Later this month the Federal Reserve Board (Fed), the U.S. Securities and Exchange Commission (SEC) and the Treasury are due to report on what additional restrictions and monitoring arrangements, if any, they believe are necessary.

More cracks might have emerged but for the credit markets' recent star-spangled price performance. The recent sharp rally in the U.S. credit markets has been spurred by signs of a weakening economy, moderating credit demands, commodity price disinflation and an accommodative response of the Federal Reserve Board.

Last month's discount rate cut to 7.5 per cent took the rate down to its lowest level since August 1978, while the benchmark bank prime corporate lending rate at 10 per cent is standing at its lowest level for six and a half years.

Aided by the significant shift in Fed policy beginning last autumn, all money market rates have plunged. Most short-term money market rates are now trading at or below their late 1982-83 cyclical troughs.

At the long end, the 30-year Treasury bond yield, after peaking at 14 per cent at the end of May last year, has plunged to around 10.70 per cent.

For investors the credit market rally has proved a real bonanza. In terms of price alone long treasuries have gained over 25 per cent in 12 months, while the total return on Shearson Lehman Brother's Treasury Bond Index has risen by 40.56 per cent, compared to around 30 per cent for equities.

All commercial banks—loans and leases*

	Total loans and leases
January 1984	\$bn
February 1984	1,142.4
March 1984	1,181.2
April 1984	1,196.3
May 1984	1,212.2
June 1984	1,232.0
July 1984	1,243.2
August 1984	1,266.7
September 1984	1,284.2
October 1984	1,300.6

December 1984	1,321.4
January 1985	1,321.4
February 1985	1,335.3

* Excludes loans to commercial banks, seasonally adjusted.

Meanwhile, the recent sharp rally, coupled with somewhat less aggressive pricing in the Euromarkets in the past few months, has spurred a flood of new corporate issues paced by offerings of intermediate maturities.

Since the start of the year around \$30bn in new corporate fixed income securities have been brought to market, a 25 per cent increase over the same period last year. And the current \$30bn in potential offerings sitting on the rule 415 shelf suggests that the record breaking pace could continue.

Nevertheless, the market faces a number of key uncertainties. Among these are the performance of the economy in the second half of this year, the dollar exchange rate, where a sharp break could provoke a sell-off by foreign portfolio holders, the prospects for meaningful Congressional action on budget deficit reduction and, perhaps the biggest wild card, the Fed's monetary stance.

Taken together these factors appear to promise even more price volatility in a market where the risks and rewards are already enormous and likely to become even more pronounced as competition and product innovation continue apace.

Exchanges

BARRY RILEY

ONE DAY last August there were 236.5m shares traded on the New York Stock Exchange, an all-time peak. A few days later the exchange topped the 200m mark again.

According to an official of the NYSE: "In two days we did virtually what back in the middle 1960s would have been a whole month's worth of volume, without any hitches in the system."

That trading capacity is the result of \$100m worth of investment in technology in the past nine years, and in fact there is plenty of room for further growth because the systems have been successfully tested at a daily volume of over 400m shares.

But for 1984 as a whole, volume on the NYSE was up only a modest 7 per cent or so, and for all its apparent strength the Big Board faces the need to adapt rapidly to a constantly evolving market place.

Pointers to its changing attitudes include the decision last year to open for the first time on Presidential Election day, and the current discussions on a possible merger with the Pacific Stock Exchange.

There is talk of extending the trading hours by perhaps half an hour at each end of the day, and rather more melodious suggestions of global 24-hour trading.

In their joint statement in the recent annual report the chairman, Mr John Phelan, and the vice-chairman, Mr William Ellinghouse, declared: "The Exchange is a company in transition."

The smaller U.S. stock exchanges have been much more obviously affected by the changing environment. For them, the biggest challenge has been the mushroom growth of the over-the-counter market NASDAQ (the National Association of Securities Dealers Automated Quotations).

NASDAQ is now the third

biggest securities market in the world behind the NYSE and the Tokyo Stock Exchange. In response to the competition, other U.S. markets have been forced to diversify, so that the Philadelphia Exchange has focussed heavily on traded currency options and the American Stock Exchange relies for much of its business on stock options.

Developments in technology have been the key to the growth of NASDAQ, which has become a nationwide electronic market. The role of the Securities and Exchange Commission has also been crucial in encouraging improvements in standards of trading, leading to a transformation in the status of the OTC market.

While the growth of NASDAQ may have been irritating to the

aggressive in terms of its quest for new business."

One response back in 1982 was to solicit initial public offerings, of which there had been none on the NYSE since 1984. In the past two years, in sharp contrast, 27 companies have become listed on the exchange through IPOs.

But the bigger opportunity now lies overseas. Within the U.S., the NYSE can only identify 275 companies, being traded on the Amex or NASDAQ, which would qualify for listing on the Big Board. In contrast, there are estimated to be around 400 potential candidates abroad.

What is more, there are also

intensely no domestic replacements for the likes of Gulf Oil. Such

There are indications that the SEC is becoming more flexible in its approach to foreign listings. As for dual class capital, the NYSE has conducted elaborate opinion-gathering exercises among its members and users and is likely to apply to the SEC for a relaxation of the rules.

The SEC will not wish to damage the prospects for the NYSE. At the same time, the commissioners are bound to be concerned about the risk that greater competition between exchanges, both domestically and internationally, could lead to an erosion of standards.

But the trend towards internationalisation is becoming well-established. Some of the NYSE's highest member firms are prominent in the development of an unofficial 24-hour global market in perhaps 200 international grade equities which moves from Tokyo to London to New York on a follow-the-sun basis.

The NYSE has been conducting serious discussions with London and other foreign stock exchanges in a bid to ensure that this global trading is captured by the existing market places.

The NYSE is looking for links with all the major exchanges around the world, though the precise nature of any future relationships remains unclear. To begin with, the exchanges are likely to consider co-operation in the development of technology, leading to electronic interfacing and perhaps to some kind of affiliation.

Even within the U.S. the talks with the Pacific exchange are notable, because the NYSE has never been involved in any similar merger before. Having a presence in another U.S. time zone seen as being important, and there are benefits expected in getting closer to the Pacific Basin.

It is not clear whether the merger will actually go through. But such proposals show just how radically the stock exchanges in the U.S. are being affected by changing technology and by the scope for diversification into the burgeoning new fields of futures and options trading.

There is a risk that greater competition between exchanges could erode standards

NYSE at times, the New York market remains four or five times as big in volume terms, and its problems lie much more in the changing structure of the U.S. corporate sector as a whole.

Big old companies are being taken over, broken up or are just dying on their feet, and despite a strong marketing push the NYSE has not been able to run fast enough to keep its numbers of listings up.

In 1984, the NYSE secured 84 new listings, the second best figure in its history. But in the same year it lost 91, for a net decline of seven. At the year end, 1,511 common stocks were listed.

The exchange's executive vice president in charge of marketing, Mr Richard Grasso, puts it like this: "The carnage that has come as a result of mergers and acquisitions and leveraged buyouts has caused this institution to become much more

big companies are only to be found outside the U.S. "That is where we focus our real long-term growth opportunity," says Mr Grasso.

So far, however, the NYSE has not made much headway, despite one or two prominent British captures like ICI and British Telecom. Excluding Canadians, the NYSE has only about 20 foreign listings so far.

The exchange faces regulatory hurdles. Its requirements for listing are more stringent than those of any other exchange inside or outside the U.S. Foreign companies are inhibited by the need to become fully registered with the SEC—with onerous commitments such as quarterly reporting and the provision of segmental data—while several major domestic companies such as General Motors and Dow Jones are scheduled for delisting because of the exchange's ban on dual class capital.

The exchange's executive vice president in charge of marketing, Mr Richard Grasso, puts it like this: "The carnage that has come as a result of mergers and acquisitions and leveraged buyouts has caused this institution to become much more

big companies are only to be found outside the U.S. "That is where we focus our real long-term growth opportunity," says Mr Grasso.

So far, however, the NYSE has not made much headway, despite one or two prominent British captures like ICI and British Telecom. Excluding Canadians, the NYSE has only about 20 foreign listings so far.

The exchange faces regulatory hurdles. Its requirements for listing are more stringent than those of any other exchange inside or outside the U.S. Foreign companies are inhibited by the need to become fully registered with the SEC—with onerous commitments such as quarterly reporting and the provision of segmental data—while several major domestic companies such as General Motors and Dow Jones are scheduled for delisting because of the exchange's ban on dual class capital.

NYSE at times, the New York market remains four or five times as big in volume terms, and its problems lie much more in the changing structure of the U.S. corporate sector as a whole.

Big old companies are being taken over, broken up or are just dying on their feet, and despite a strong marketing push the NYSE has not been able to run fast enough to keep its numbers of listings up.

In 1984, the NYSE secured 84 new listings, the second best figure in its history. But in the same year it lost 91, for a net decline of seven. At the year end, 1,511 common stocks were listed.

TRADING PLACES.

The United Kingdom, the Continent and the U.S.A. are trading places every day. And Maryland National Bank can make your organization's trading more effective and more profitable. Maryland National is the largest and fastest growing bank in the Port of Baltimore, which is the second largest container port on the U.S. East Coast. We are also only 30 miles from Washington, D.C., giving us easy access to those U.S. government and international agencies which make trade happen.

Maryland National Bank specializes in financing for major U.S. imports and in complex trade negotiations, such as multi-million dollar government supported loans for capital equipment export, and trade-related syndication packages. In addition to our trade finance expertise, we offer just a little bit more.

We'll work to put you in touch with potential buyers. So if you're in one of the trading places shown above, ring up Maryland National Bank and start your trade financing arrangements today.

Corporate Finance

In the grips of a merger mania

IT SEEMS as if the corporate finance departments of Wall Street's investment banks have never been busier, as they cope with the surge of takeovers, mergers and leveraged buyouts which have been sweeping through the U.S. economy for the past two years.

According to W. T. Grimm, a Chicago firm which has been tracking U.S. merger activity for years, some \$122.2bn was spent on mergers and acquisitions last year—up two thirds on the year before.

Of course, the figures were inflated by a handful of mega-deals such as Chevron's \$13.2bn acquisition of Gulf and Texaco's \$10.1bn purchase of Getty Oil.

But there were another 15 deals worth \$1bn plus, last year, and in the first few months of 1985 the pace has accelerated. If anything, it is hard to believe that until 1975 there had been only one billion dollar corporate acquisition—Xerox's purchase of Selective Data Systems in 1969.

The last time corporate America went on a buying spree of anywhere near the same scale was in 1981 when deals such as Dupont's \$8bn purchase of Conoco and U.S. Steel's \$6.8bn takeover of Marathon hit the headlines. But the merger mania which gripped Wall Street then, pales by comparison with the activity of recent months.

Scarcely a week goes by without news of a massive corporate deal or another daring bid by a corporate raider. Household names in corporate America ranging from CBS to TWA have come under attack from people who a year or two ago would have been laughed out of court.

While it is the exploits of the corporate raiders which have caught the world's attention, several of America's better managed companies have returned to the takeover trail. General Motors, General Electric, IBM, Dun and Bradstreet have all announced major strategic acquisitions costing upwards of

\$1bn apiece over the past year. Allied's recently announced \$5bn plus acquisition of Signal highlights the trend.

Plethora of reasons have been given for the surge in activity. Despite the rise in U.S. share prices over the last year, Wall Street still values some well known companies well below their break-up value.

Buying a company can still be a lot cheaper than building new plants and the current administration in Washington is taking a much more relaxed view than its predecessors about the dangers which might lie ahead from the current merger craze which is gripping U.S. corporations.

The U.S. Federal Trade Commission and the Department of Justice no longer seem to pre-

sent the insurmountable obstacles to the mega mergers which they once did. But the final, and most controversial factor, behind the current wave is the emergence of a new breed of corporate predator and Wall Street adviser. There was once a time when Wall Street investment bankers refused to work for companies planning hostile bids and would-be purchasers had to demonstrate that they had the financial muscle and management track record to undertake a takeover.

With one or two exceptions this is no longer the case. The most significant change is that

panies which have been under attack by clients of Drexel, the latter has also had to sign standstill agreements under which the raider agrees not to make another attack for several years in return for compensation which in Phillips' case was substantial.

Meanwhile, companies like Phillips and Unocal have agreed to reward their advisers much more handsomely if they succeed in remaining independent. This raises the question of whether these advisers should be working for a company's shareholders or its entrenched management.

No one is denying that the

presence of these corporate raiders and their advisers is helping shake-up sleepy management and this is good for the U.S. economy. But beyond that there is a growing concern that perhaps the "current excesses outweigh the benefits."

Mr Ed Hennessy, who heads Allied and is no stranger on the takeover trail, is extremely critical of the current breed of corporate raider. "They are actually speculators who take takeovers as a means of creating lucrative markets for large blocks of stock they want to unload," says Mr Hennessy. He believes that the practice of forcing managements to buy back their shares at a premium, a practice known as "greenmail," is no different than robbing a company's shareholders.

There were more than 50 cases of "greenmail" last year and it has been estimated that \$3.5bn was paid over.

On the other side, companies have been forced to take a number of defensive actions to protect themselves from the current merger mania. Several of these moves, such as the adoption of "share repurchase" and "poison pills," have raised questions whether the price companies are paying to stay independent at all costs is too high.

A particularly worrying development associated with the current surge in takeovers and leveraged buyouts is the scale of debt which companies are taking on board to fulfil their ambitions.

Several officials in the Federal Reserve and the U.S. Securities and Exchange Commission have already voiced fears that the "leveraging-up of America" will magnify the consequences of the next recession or produce a significant rise in interest rates. When the current merger euphoria subsides—and there are signs that it is already abating—corporate America and its bankers may wake up to find that it has inherited a much healthier large debt burden.

A particularly worrying development associated with the surge in takeovers and leveraged buyouts is the scale of debt which companies are taking on board to fulfil their ambitions.

William Hall reports.

Giving raiders food for thought

Defensive Strategies

TERRY DODSWORTH

MR FOWLER of Fowler's Modern English Usage would never have been able to tolerate the "reflex mixture of resistance and acquiescence" which now characterises the language of the takeover game, full of references to man's predatory instincts and destructive talents. It is now quite possible to avoid a "bear hug" by offering "greenmail," launching a "Pac-Man" defence, or, in an even more confusing manoeuvre, taking an "exploding poison pill."

Most of these terms refer to defensive strategies against the new type of financial raiders who have marched on to the takeover scene in the past few years. Although many of the mechanisms have not been particularly successful, the more sophisticated recent variety are certainly giving the raiders food for thought. They include:

Greenmail: Perhaps the most widely-used, but also most maligned defensive device, greenmail (a mixture of the words blackmail and greenbacks) occurs when a company buys out a large, hostile shareholder by offering him a premium for his stock. Efforts to stop greenmail advanced as far as Congress last year but now appear to have been abandoned.

White Knight: A friendly firm brought in by the company under attack to avoid a hostile bidder. Part of the success of the raiders has been in flushing out White Knights, whose takeover offers have generally given the hostile bidder a profit on their holdings.

Pac-Man Defence: A variant of the "best form of defence is attack" theme, in which the

target company launches a counter-offer against the bidder. Staggered board: Many companies have introduced staggered terms for directors so that it is difficult to throw out all the board members at once. This is a defence against proxy battles to gain control of the direction of the company.

Fair Price Clauses: Amendments to the company by-laws requiring a raider to pay the same price for all the shares. The concept of this manoeuvre is to prevent two-tier bids of the type which are very common in the U.S., in which the bidder buys part of the company for cash, but offers the rest of the shareholders a paper offer, which may not be so favourable, at a later date.

Shark Repellents: By-law amendments to make raiding more difficult by a number of means, such as supermajorities to approve a merger, changing the state of incorporation, and staggered directorships.

Share Buybacks: Immensely popular over the past 12 months, share buybacks are designed to increase the price of the shares by reducing the supply, while often making the company less attractive to a bidder by loading it up with debt taken on for the buyback.

Poison Pill: This device is meant to dilute the control position of the bidding company, thus "poisoning" its bid. Even if it succeeds, the target firm may declare a dividend in a convertible preferred stock to existing shareholders. If the hostile bidder offer succeeds, the preferred becomes convertible into the voting stock of the surviving company, thus diluting its control position.

Several companies have installed a new sophisticated variety of the pill to a version which gives shareholders the right to buy shares in it at half the

market price. Although regarded as an extremely strong deterrent, Sir James Goldsmith, the UK financier, has challenged its workings in a bid for control of Crown Zellerbach. The results of this manoeuvre are still not clear.

The Courts: Both defenders and aggressors use the courts vigorously to challenge their opponents' tactics, motives and probity. The biggest defensive victory was that of Unocal, the West Coast oil company, over Mr. Boone Pickens, the most famous of the raiders, in which the court said that the company could use its "best business judgment" to defend itself,

and could exclude Mr Pickens from a generous buyback offer because of his history as a greenmailer.

Both the Unocal decision and the new sophisticated poison pills are likely to slow down the predatory raiders. But even if they do, there are signs that the flood of bids in the last two years have pressed home to management that the "best defence of all is performance and a share price to match. This accounts for a wave of re-organisations, involving the sale of poorly performing divisions, the write-off of dud assets, and the drive to pep up results in many vulnerable companies.

A FINANCIALTIMES SURVEY

ISLE OF MAN

JUNE 28 1985

The Financial Times proposes to publish a Survey on the Isle of Man in its issue of June 21st 1985. The provisional editorial synopsis is set out below:

INTRODUCTION After the traumas of recent years in banking, the Isle of Man is now consolidating its position as an offshore centre. Deposits are flowing in and the search continues to attract more blue-chip banking operations. In parallel with these moves the Manx Government is developing the industrial and commercial base in order to create a well-balanced economy.

A higher profile adopted by predators

Raiders
WILLIAM HALL

THE number of corporate raiders on Wall Street appears to have mushroomed over the past year and a half, but most of them have been around for some time. The only difference is that they are more visible now. The following is a brief rundown on some of the more familiar names and their track record.

THE OLD HANDS
T. Boone Pickens, aged 57, was until recently the unchallenged king of the corporate raider and had made close to \$1bn through raids on a string of oil companies of which the most famous was Gulf Oil. His master company, Mesa Petroleum, has grown rapidly but is still a minor player among the U.S. oil majors, and over the past couple of years has begun to look more like an investment bank and less like an oil company. His reputation on Wall Street, where at one stage he seemed able to raise billions of dollars for raids on undervalued oil companies, has been damaged following his defeat in the recent battle for Unocal. This could cost him close to \$100m and tie up his money for some time. He should not be underestimated, however.

Carl Lindner, aged 65, a secretive figure from Cincinnati, Ohio, has a reputation as a shrewd investor and a dogged adversary who likes his privacy, which explains why he took his master company, American Financial, private in 1981. Helped finance T. Boone Pickens at a critical stage in the latter's battle for control of Gulf Oil last year, and has substantial stakes in United Brands, Penn Central and Gannett Company. His latest coup was to rescue the failed Home State Savings Bank from under the nose of New York's Chemical Bank.

Victor Posner, aged 66, a Miami Beach financier who left school at 13 and is reputed to have become a millionaire before he was 21. Made his early money in Florida real estate before moving into the stock market and building a 40-company empire which was said to be worth upwards of \$1bn at its peak. Several of his companies have been having

financial problems lately which probably explains why he has been less active than normal on the takeover front.

Jay Pritzker, aged 63, until he came to rescue Braniff from bankruptcy last year, was best known for the takeover of the Hyatt Hotel chain in 1982. He is a member of a wealthy Chicago family which has a reputation for investing in undervalued companies in normally unglamorous industries and making a profit. His biggest investment is Marmon Holdings which is run by his brother, Robert A. Pritzker.

David Murdoch, aged 61, is a Los Angeles financier who made his first fortune by building houses in Arizona. Tends to be more of a long-term investor than some of the others. Was the biggest shareholder in Occidental Petroleum before he fell out with the 86-year-old Dr. Armand Hammer, who would not allow him to play as active a role in the company as he wanted. Occidental bought him out at a hefty premium last year. Since then he has devoted himself to rescuing companies from other raiders such as Sir James Goldsmith and Irwin Jacobs. Likes to work with existing management. Currently masterminding the rescue of the troubled Castle and Cooke, a West Coast food and real estate

group, which has been a frequent target for "greenmailers."

THE YOUNG TURKS
Sam Stalberg, aged 45, first hit the headlines with an astonishing bid for Chemical Bank, a pillar of the U.S. financial establishment, in 1969 and has retained a reputation for audacity. His Reliance Insurance Group is often used as a vehicle for taking stakes in other companies. Last year he made a \$60m profit on a two-month-old investment in Walt Disney by selling the shares back to the company.

Carl Icahn, aged 48, has been dubbed "the man chief executive officers love to hate" and works out of a New York brokerage firm, Icahn and Co. First came to prominence in 1982 when he tried to take over Marshall Field, the big Chicago retailer. Made upwards of \$80m through takeover raids on Phillips Petroleum and Unifroyl this year and is currently bidding for TWA, the fifth highest U.S. airline, which is just as unhappy as most of Mr. Icahn's other targets about his expressed interest.

Ivan Rosky, aged 48, a New York investor who is said to be one of the biggest and boldest arbitrageurs, who buy and sell shares during takeover raids. The sort of man Boone Pickens likes to have on his

1984/85 mergers & acquisitions valued over \$1bn

side, and is reputed to have made handsome profits during the recent merger wave in the U.S. oil industry. Said to sleep only three hours a night and be worth in excess of \$150m.

Irwin Jacobs, aged 43, a Minneapolis-based financier, is known as "Irv the Liquidator" because of his ability to buy distressed merchandise and sell it at a profit. Has not been afraid to challenge household names like TIT and Walt Disney. His flagship, Minstar, was formed from the remnants of a bankrupt snowmobile and boat building operation and has been expanding rapidly through acquisitions. It has even attracted the attention of other raiders including Mr. Icahn and Leucadia National Corporation, who have bought stakes.

SOME WELL KNOWN GANGS
The Bass Brothers, a Texas family which uses its oil fortune to buy and sell stakes in dozens of U.S. companies. Over the past year they have taken stakes in companies ranging from Union Carbide to Georgia Pacific and Walt Disney, and are believed to have made unimpressive bids for Conrail and Continental Illinois. Caused an uproar among big institutional investors by persuading Texaco to buy back their 12 per cent stake at a substantial premium. This textbook piece

of "greenmail" made the brothers \$400m. The family is said to be worth \$4bn.

The Belzberg, Sam Belzberg and his two brothers, Hyman and William, run in a somewhat smaller league and operate mainly under the umbrella of the Vancouver-based First City Financial Group. They first came to Wall Street's attention when they bid for the Bache Group, one of the best known Wall Street firms, and since then have frequently surfaced in contested bids. They backed Boone Pickens in his battle for Gulf and recently won control of Scovill, maker of Yale locks.

FOREIGN INTERLOPERS
Sir James Goldsmith, the 52-year-old Anglo-French financier, is a more familiar figure on Wall Street than the city of London these days. Has been specialising in hunting down undervalued situations in the depressed U.S. forest products business. Last year he made threatening noises in front of St Regis, one of the country's highest paper companies, and the Continental Group, a major packaging group. Both took the hint and sought friendly suitors leaving Sir James with a handsome profit. Currently concentrating on "enhancing the value" of his investment in Crown Zellerbach, a sleepy West Coast forest products company. Mr. Rupert Murdoch, the 54-year-old Australian publishing magnate has been mixing raids on Wall Street with the expansion of his U.S. communications empire. His first coup was St Regis which was forced to buy back his shares at a \$37m profit. Bid unsuccessfully for Warner Communications, but walked away with \$50m in profits.

An issue of controversy

Junk Bonds
WILLIAM HALL

FEW developments in the U.S. corporate finance world have caused as much controversy as the booming market in high yield securities, better known as "junk bonds."

"Junk bonds" have been around a long time. The term originated to describe the bonds of an established company which had lost their investment grade ratings from the U.S. credit agencies. In the case of Moody's, paper rated BAA1 or lower is non-investment grade and in the case of Standard & Poor's it is BB plus or lower.

Many institutions are limited to investing in investment grade bonds, and if a company loses the investment grade rating on its paper, the number of investors who can buy its paper falls. Famous companies like Chrysler Corporation, Eastern Airlines or Montgomery Ward have all had paper which at one time or another slipped into the "junk bond" category.

For years this sector of the bond market was regarded as little better than a graveyard, but during the 1970s increasingly sophisticated investors discovered that despite the financial problems of the issuer, the default record on so-called "junk" was extraordinarily low. Few people had lost any money in "junk bonds" over the years and they had earned a substantially higher return than if they had invested in higher grade paper.

While "junk bonds" have a rather derogatory sound, it is a fact of corporate life that the paper of some 85 per cent of American companies would fall into this category if they were to issue new bonds because the financial requirements of the credit rating agencies are so high.

About ten years ago Drexel Burnham, a New York investment bank, began to issue bonds for those companies which could not attract investment grade ratings. Since then over 350 U.S. companies have raised over \$86m and expanded the total size of the "junk bond" market to around \$100bn. Drexel's initial expansion in this area did not draw criticism. After all the company was

raising money for young and often fast growing companies which were not big enough to win the blessing of the credit rating agencies.

However, Drexel decided to branch out and begin issuing "junk bonds" to help companies that wanted to take themselves private by a form of leveraged buyout where shares are paid off with debt. One of the best examples was Metromedia which went private by issuing a large amount of "junk paper."

From there, it was just a short step to providing the financial muscle for the corporate raiders such as T. Boone Pickens, whose attack on Gulf Oil last year resulted in one of the biggest corporate upsets in recent times.

Over the past year the pace of new issues has taken off, as has the controversy. In 1979 less than \$20m of "junk bonds" were issued. Last year \$15bn hit the street and a large portion of these bonds were brought to market by Drexel Burnham and used to finance an increasingly daring group of corporate raiders.

Drexel and other "junk bond" issuers have been quick to exploit the rapidly growing appetite for this kind of paper. U.S. savings banks, under pressure to improve their feeble profits, have leapt into the market and gobbled up close to \$3bn of this risky paper, which makes savings bank regulators increasingly nervous.

Last year, Drexel accounted for over two thirds of the money raised in the "junk bond" market and its ability to raise billions of dollars quickly has appeared to make the firm the chief ally of the corporate raiders. Indeed, some companies blame Drexel Burnham more than the corporate raiders for their problems.

Drexel is sensitive to the criticism and has been arguing lately that investor appetite for the "junk paper" of corporate raiders has been largely satisfied.

From hereon in, it will be more difficult to raise the same amount of money says Drexel. The other imponderable is whether the default record of the new generation of "junk bond" issuers will be as good as the records of the "fallen angels" who had no choice but to grin and bare it when they fell into the sector.

MISSOURI. The Profit Center.

If you're considering expansion or relocation in the U.S., you'll profit from being right in the center. In Missouri. Because Missouri is more than just the population center of the U.S., it's also a major transportation centre.

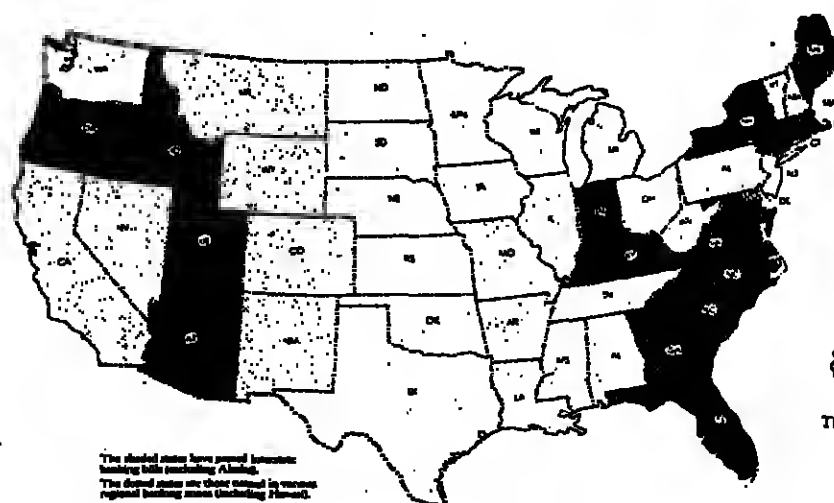

From highways to waterways, Missouri's central location can save you time and money. Missouri has six interstate highways, 20 great railways, two major waterways, the Missouri and the Mississippi rivers and more than 250 air facilities. Our two international airports offer flight service to Europe including a non-stop flight from Gatwick airport. Missouri enjoys a superior quality of life at a surprisingly affordable cost. Productivity is high and taxes are low (48th in the nation). Join the growing list of European companies that have made the move to Missouri. You'll profit from being right... in the center.

Missouri is right... in the center

Let Missouri show you why it's The Profit Center. Complete this coupon and mail it to Peter Armstrong, State of Missouri International Business Office, Emanuel-Lautze-Strasse 1, 4000 Dusseldorf 11, Federal Republic of Germany. Mr. Bank Chairman— It's Your Move!

Fed Backs Interstate Banking
Volcker's Plan Urges a Move Within 3 Years
By MATTHEW C. HARRIS
WASHINGTON, April 24—Paul A. Volcker, Chairman of the Federal Reserve Board, urged Congress today to pass legislation that would permit interstate banking. For the first time, Mr. Volcker outlined a formal plan for the Federal Reserve to support the move.

Make It The Right Move!

Expert guidance is needed by today's successful banker. Guidance through a sometimes bewildering field of options; decisions and unending changes. Where the ability to consult experts—experts dedicated to the sole purpose of advising bankers—can make the difference between the right move and confusion.

Keefe, Bruyette & Woods, Inc. has over two decades of experience as that kind of expert.

We have more professionals whose business is understanding the commercial banking industry than any other investment bank. We've advised clients on literally all types of transactions—competitive bidding, merger of equals, contingent mergers, stake-outs, unsolicited offers, tender defense and white knight rescues. Transactions of the most extreme significance, layered with complexity, crucial to the welfare

of the bank and its shareholders. We have a history of helping banks of all sizes make the right move, interstate as well as intrastate, such as: First & Merchants Corporation merging with Virginia National Bankshares, Inc. to form Sovran Financial Corporation; CBT Corporation merging with Bank of New England Corporation; Sun Banks, Inc. merging with Trust Company of Georgia to form SunTrust Banks, Inc.; First Commerce Corporation merging with The Bank of New Orleans and Trust Company; National City Corporation merged BancOhio Corporation; United Michigan Corporation acquired by NBD Bancorp, Inc. (KBW clients in bold print.)

We can help you make your right move.

Are you now investing in the USA? Or have you just been thinking about it?

In either event, you should be reading **U.S. Investment Report**. We'll be glad to send you a **FREE** copy. There is no obligation.

U.S. Investment Report, published every other week, is the first newsletter prepared in New York specifically for overseas investors who have part of their portfolios in U.S. dollar investments or who may be considering placing a part of their assets to work in the U.S. **U.S. Investment Report** does not buy or sell securities, or manage money. We are concerned only with providing you with information you can put to good use to realize a profit (or avoid a loss) on your U.S. investments.

What kind of information? Here are some samples:

- **BONDS:** How the U.S. Government is trying to attract overseas investors... "Ginnie Mae" certificates that are guaranteed by the Federal Government, yet yield more than Treasury bonds... How to invest in zero coupon bonds... convertible bonds... "junk bonds"
- **MUTUAL FUNDS:** How to use Money Market funds to earn cash while you are waiting to make a long term investment... Finding the winners and losers... together with performance records, names and addresses.
- **REAL ESTATE:** A hard look at Real Estate Investment Trusts (REITs) that are now back in favor... Whether to invest in a pool of real estate mortgages rather than U.S. land, buildings or apartments.
- **STOCKS:** Which hi-tech stocks will recover?... Growth stocks versus value stocks... how to choose between them... Which computer related companies will survive?... Financial opportunities in high-yield stocks...
- **TAXES:** What does Reagan's flat-tax scheme mean to non-resident investors?

Each time **U.S. Investment Report** explores a subject like those above we tell you how you can take action if you are ready, or how you can learn more. You will get names and addresses, not generalities. Send the coupon for your **FREE** copy.

U.S. Investment Report
 Suite 1A, 61 East 82nd Street, New York, NY 10028—U.S.A.

I would like to see the current issue of your newsletter. Please send me a **FREE** copy of the **U.S. Investment Report** along with a subscription form. I understand there is no obligation.

New York Federal Reserve Bank (left). Bank of America's data centre in San Francisco (right)

The key unresolved question is whether the fragmented members of the U.S. banking community can bury their deep-seated divisions long enough for a concerted push against outdated and irrelevant laws, reports Paul Taylor.

Desperate need for reform

FOR U.S. bank depositors, shareholders and management alike the last 12 months has been like living on the fault line in an earthquake zone. First came the near collapse of Continental Illinois, the nation's eighth-largest banking group, followed by a \$4.5bn Federal rescue package. Even before the dust had settled on the Continental rescue, Financial Corporation of America, owner of the largest thrift in America, was in trouble. Charles Knapp, FCA's chairman was ousted and the California savings bank reported a \$590.5m loss for 1984. Then, as the big money centre banks' earnings and share prices rebounded, aided by declining interest rates, fast lending spreads and booming fee income, serious credit problems emerged among some of the regional Texas energy and Mid-West agricultural banks struggling with the underlying problems of their customers. Since the start of this year,

after a scandal involving some financial institutions unwittingly laundering Mafia money and many banks admitting that they had failed to report large international cash transfers, it has been the turn of the privately-insured savings banks to feel the heat.

The collapse of a small Florida-based Government bond dealer in March resulted in the closure of Home State Savings, Ohio's largest privately insured savings bank, and a run on the deposits at other privately insured institutions forcing Ohio's state governor to declare the first extended bank holiday in the U.S. since the depression years. A few weeks later Maryland's privately-insured thrifts were in trouble, after a run on deposits forced that state's governor to limit withdrawals and put several of the institutions up for sale.

Meanwhile, the attack on the historic barriers separating commercial from investment banking in the U.S., and on the

geographic restrictions on bank activity has continued—adding to the upheaval generated by recent interest rate deregulation.

Smart bank lawyers exploit loopholes in existing rules, product innovation continues apace and a creeping trend towards interstate banking is increasingly evident, spurred by technological advances, state initiatives and cross-state-line banking rescues.

Across the U.S., states have banded together to allow limited interstate banking, a move which is seen as a stepping stone towards federally-sanctioned full interstate banking and a process which has won the backing of Federal Reserve Board (Fed) chairman, Mr Paul Volcker.

Other states, like Maryland and Ohio, have been forced to throw open the doors to interstate mergers because of problems among their own financial institutions. The range of financial products offered by banks is also expanding. Many U.S. banks have found ways to offer insurance and discount brokerage services. Banks like Citicorp and Bankers Trust have pushed ever deeper into the traditional territory of the securities firms, acting as agents for commercial paper placements and providing a wide range of fee generating services to corporate clients. Many have acquired stakes in overseas securities firms, as markets like London have prepared for deregulation.

Turnout within the U.S. banking sector has prompted over more important pressure for legislative reform from senior bankers and federal regulators charged with the increasingly difficult task of monitoring and overseeing a changing industry. But caution has also been urged. Under pressure from the regulators, banks have

sharply increased their loan loss reserves, lifted their primary capital and begun to more closely monitor off-balance sheet risks.

"The problems of the weak can undermine the prospects of the strong, especially during a period of transition," Mr Gerald Corrigan, the recently appointed president of the New York Federal Reserve Bank, warned recently.

However while the growing pains and strains of an industry in the process of a major upheaval have prompted some calls to "set the regulatory clock back," most bankers and regulators believe such efforts would be both futile and counterproductive.

"Congress has an opportunity to impose a new kind of order on our financial system, one which is fairer and in tune with the modern world," said Mr David Reim, Bankers Trust's executive vice president in charge of the New York-based banking group's finance department. In Congressional testimony last month, he added: "It is a waste of time to try and return to the 1930s, or to continue with outdated and irrelevant laws."

Most regulators appear to agree. Mr Corrigan in a major speech earlier this year said, "Our federal banking laws are in desperate need of reform and we need to get on with that task promptly."

The key unresolved issues are whether the fragmented members of the U.S. banking industry can bury their deep-seated divisions long enough to mount a concerted push for such action, and whether Congress will finally face up to the challenge to help shape the future of a vital sector of the U.S. economy—before competitive pressures and inventive business make the issue a moot one anyway.

Performance still patchy

Banks
 PAUL TAYLOR

SOLID FOURTH-quarter earnings—backed by a perky first quarter—have given U.S. bankers, and shareholders, something to cheer about at last.

Bank stocks on Wall Street have bounced back from the lows they reached in the dark days immediately following the near collapse of Continental Illinois last year.

Indeed, in recent months most money centre bank stocks have continued to outperform the S & P 500 Index—indicating a remarkable resurgence of investor confidence following a traumatic period which saw the U.S. majors suffer the twin impact of troubled credits at home and abroad, particularly among the less developed debtor nations.

But this broad picture hides some more disturbing details reflected in a still patchy industry performance last year. Some 79 commercial banks failed, a record number of agricultural lenders are currently on the regulator's "problem list" and while the immediate pressures of the Third World debt crisis have eased, few senior bankers are bold enough to suggest they have disappeared for good.

While most big banks have benefited from improved net interest margins, an expanding asset base and buoyant non-interest income, some of the regional banks have suffered as a result of new concerns about credit quality.

The much improved fourth quarter results saved most banks from posting 1984 full year earnings declines. The profits picture was considerably more uneven than the 1.5 per cent increase in 1984 net earnings or 20 per cent average increase in first-quarter profits among the 15 major banks actually implies.

In 1984 the profit highlights included 17 per cent year-on-year gains at Bankers Trust and J. P. Morgan, two of the most consistently profitable banking groups in the big league. But these gains were offset by Continental Illinois's \$1.1bn loss and a \$324.4m loss at Crocker Bank, the troubled west coast banking subsidiary of Midland Bank of the UK.

The year was also characterised by a flood of special gains such as bank headquarter building sales which many banks, like Security Pacific, used to offset substantially higher loan loss provisions. The higher provisions, which continued in the first quarter of this year, reflected a more aggressive writing-off of troubled loans and additions to reserves.

The need for increased reserves reflects not only the continuing high levels of non-performing loans—which appear to have stabilised at last in the first quarter this year—but also pressure from the regulators to increase capital ratios. Among the 15 largest U.S. banks this key measure of "bank safety" has risen from an average of 5.72 per cent a year ago to 6.13 per cent at the end of the first quarter of this year.

In the meantime, competitive pressures in the U.S. banking industry continue to grow—forcing bankers to adopt new, and sometimes more risky, strategies. As Mr Gerald Corrigan, the president of the New York Federal Reserve Bank, noted last month: "Intense competition, by its very nature, encourages innovation. That is something we should welcome. But, in banking and finance, the process of innovation must be tempered by prudent elements of caution and prudence."

Hoping to muddle through

Thriffs

WILLIAM HALL

THERE is an old joke that the most important thing to remember for a U.S. savings banker was the 3-6-3 rule. It was the key to success in the industry. Take the money in at 3 per cent, lend it out at 6 per cent, and be on the golf course by 3 p.m. If only life was as easy now.

The sweeping deregulation of controls on the interest rates U.S. savings banks can pay and the types of business they can do, has come at one of the toughest times in their history. It is not only the new competition, resulting from deregulation, which is hurting them.

Deflationary pressures are putting stress on house prices and historically high real interest rates are making it difficult for a growing number of borrowers to meet obligations. Any one of the above would be a major problem in its own right for the industry, whose 4,000 plus institutions control over \$1,000bn in deposits. But coming together at a time when many of the players have still not recovered from the financial traumas of the late 1970s, it has the makings of a very serious financial crisis.

The recent run on the small privately insured savings banks in Ohio, and then Maryland, has demonstrated the fragility of some depositors' confidence in their neighbourhood savings banks.

And while officials have stressed that the cause of the sweeping loss of confidence has to do with the fact that the deposits were privately insured, unlike the vast majority of de-

posits which carry federal insurance, they must be shocked with the speed with which customers withdrew their money.

The television pictures of the long lines of depositors locked out of their banks has sent a chill through the minds of many small depositors who felt that one savings bank was as good as another.

At the federal level there is an uneasy calm. Last year's loss of Financial Corporation of America (FCA), parent of the biggest U.S. savings bank, forced the authorities to step in and sack Mr. Charles Knapp and his henchmen who had overseen the group's meteoric rise from a \$1bn institution to a \$32bn institution in just six years.

FCA is being kept afloat with federal help as are the big savings banks in New York City, and plenty more around the country, particularly in the south-east. Most depositors understand that their deposits are safe in the federally insured institutions.

But they would not be happy if they were to learn that their deposits might be temporarily frozen as has happened to several hundred thousand depositors in savings banks in Ohio and Maryland.

If such a fear were ever to take hold, the authorities would face tremendous difficulties stopping nervous depositors from switching their funds to "safer" commercial banks, where they could always be assured of immediate access to their money.

When Home State Savings in Ohio finally re-opens for business later this month, its depositors will have been locked out for three months. It is a lesson which will not have been lost

on other small depositors. The authorities have been working overtime to play down the problems in the U.S. savings bank industry. Mr. Edward Gray, chairman of the Federal Home Loan Bank Board (FHLB) and the industry's main regulator, says that the 3150 federally insured savings and loan associations will make more money in 1985 than they did in the last four years together.

Mr. William B. O'Connell, president of the U.S. League of Savings Institutions, is equally bullish and says that for this stock 1985 will be a record year. Others are less sanguine about the industry's prospects. Mr. William Datcher, chairman of Chase Manhattan, put the cat among the pigeons recently when he told members of the U.S. Business Council that "We've got billions of dollars of assets in the thrift industry with inadequate capital ratios and my guess is that the banking industry will be called on to help avert a crisis."

Mr. Anthony Frank, chairman of the San Francisco-based First National City and a former chairman of the Federal Home Loan Bank of San Francisco, is one of the more hawkish members of his own industry.

"We have been sweeping bad news under the rug for so long that there are even people in and out of government who think the problem is solved," says Mr. Frank. As he sees it, "the problems are getting worse not better. You cannot bring a non-viable institution back to life whatever the interest rate scenario."

Not everyone is as pessimistic as Mr. Frank and share his view that the Government will have to step in, just like it did with Continental Illinois, and arrange a massive bailout.

Nevertheless, there is growing concern about the slim and declining resources of the Federal Savings and Loan Insurance Corporation (FSLIC) which provides insurance coverage for customer deposits.

At the end of last year FSLIC had \$5.9bn in the kitty. The collapse of even a small savings and loan can cost the fund dearly. The failure of San Marino Savings in California and Empire Savings in Texas will probably cost FSLIC close to \$500m and both these institutions are small beer compared with some of the endangered species being nursed along by the federal regulators.

Some 71 savings banks with assets of over \$1bn are said to be on the critical list and another 300 institutions with assets of around \$300bn are also on the problem list. Regulators are well aware that the longer they delay the more costly a rescue can become.

Last year's Continental Illinois rescue was a good example of how expensive it can become if officials drag their feet. By the time Continental was rescued many would-be purchasers had lost interest and the rescue package was far more costly than people first envisaged.

The same is the case with many of the problems banks in the savings bank industry. Would-be rescuers are only going to come in and take the institutions off the hands of the federal authorities if they are promised substantial official help.

However, there is not much America's savings bank regulators can do to ease their current plight except to pray for further falls in U.S. interest rates and hope they can muddle through.

A contrarily bullish market

Insurance

TERRY DODSWORTH

FIRST quarter results from the U.S. casualty and property insurance sector were nothing to write home about. Earnings were still enormously patchy, revealing no real trend to recovery, and reminding highly dependent on non-recurring extraordinary gains.

Yet Wall Street has not been discouraged: analysts believe that the turn in the annual writing cycle has arrived, and they have accordingly propelled some composite stocks to all-time highs.

The reasons for this contrarily bullish mood start first with prices. The industry's leading companies—the Hartford and Fireman's Fund—which would have seemed even more serious if they were not protected by the financial muscle of their parent organisations, ITT and American Express respectively. Responding to this undeniable evidence of the shaky finances in the industry, the leading companies have at last been willing to forego the chase for volume at any price. The retreat in some sectors of the insurance market has been very marked indeed.

Several big groups have virtually pulled out of the reinsurance business, and are taking an extremely tough line on difficult lines like medical malpractice. Indeed, their determination to put prices back at a reasonable level in the medical area is forcing some physicians to leave high cost areas like New York.

The tightening up process on prices has also been helped by the decline in the supply of available insurance. While there have been no major

corporate failures, many smaller companies have found themselves in serious trouble.

Last year, a record 15 property and casualty concerns sank into insolvency. Some of the "captive" insurance companies run by big industrial companies for their own insurance needs have been cut back, and several foreign groups have also trimmed their activities severely.

The impact of these supply reductions could be quite dramatic. Mr. Daniel McNamara, president of the Insurance Services Office, said recently that shortages of insurance writing capacity may well turn out to be "severe even under very reasonable assumptions." The industry could be unable to take on \$62bn of potentially available business over the next three years, he added, although it is notable that a number of large insurance groups have been raising capital recently to gear up for this future demand.

A further structural change has come in the management and organisation of several of the big companies. New senior managers have been blooded in a surprising number of very large companies, including Aetna, Travelers, CNA and Fireman's Fund.

How much of an impact they will make still remains to be

seen, but this shake-up at the top marks a striking change from the ingrown managerial traditions of an industry which had become bureaucratised by years of heavy regulation.

Similarly, there has been something of a shake-out lower down in several of the property and casualty companies, as managements have tried to establish a tighter grip on costs. Continental Corporation, the U.S.'s fifth largest publicly-owned composite group, purged a quarter of its agents—1,750 people—last year. At Fireman's Fund, the property and casualty workforce was reduced by 10 per cent, or 1,300 people. The effects of these changes in the environment, however, are not expected to be felt significantly by the industry until the end of 1985, when the new, higher rates begin to counterbalance the hugely unprofitable business written in previous years.

In the meantime, many of the big composite groups run up even heavier losses on their property and casualty business in the first quarter than last year. Several, indeed, would have been in the red without the support of three sectors. First, several managed to generate healthy profits from the rest of their business, par-

ticularly life insurance. Although their life activities are typically much smaller than property and casualty, it is an area where they have been expanding, and where returns have been buoyant in recent years.

Second, investment income has continued to provide a strong support to profits. Although interest rates fell somewhat in the first quarter in the U.S., the stock market was buoyant, and companies enjoyed strong cash flow to provide funds for investment. The reduction in business stemming from the cutbacks on unprofitable lines was more than balanced in cash flow terms by the increase in prices on lines which were retained.

Third, no major calamity reared its head in the first quarter to hit the industry with big payouts. In the past three years it has gone through a particularly severe patch of weather-related disasters, but in the first three months of 1985 the only significant problem was a series of severe storms in the Mid West.

If the industry can get through the year in similar disaster-free style, the Wall Street bulls will have one further reason for optimism.

U.S. FINANCE 10

Strong dollar little deterrent to invasion

Overseas Holdings

PAUL TAYLOR

LURED BY the promise of America's huge markets, foreign corporate investors have shrugged off the dollar's strength to join the mergers and acquisitions boom in the U.S. Last year foreign takeovers of U.S. companies soared to near record levels with the UK corporations leading the way.

According to figures recently released by W. T. Grimm, the research organisation which has tracked U.S. mergers and acquisitions activity for over 30 years, foreign buyers acquired 151 U.S. companies in 1984, up from 125 in the previous year. (Grimm's figures are based on deals worth more than \$500,000).

The cash value of these takeovers increased even more sharply, from \$5.9bn in 1983 to \$15.1bn last year, a startling jump, reflecting both the strength of the U.S. currency, together with a handful of multi-billion dollar deals.

Among the big deals which captured the headlines Royal Dutch Shell paid \$5.7bn for the 30.5 per cent of Shell Oil it did not already own. Nestlé joined the merger boom in the food industry by paying almost \$3bn for Carnation and most recently West Germany's BASF group paid \$1bn for United Technologies' Inmont subsidiary.

Excluding these mega-deals

Mr Rupert Murdoch: Daring expansion plans in U.S.

the sharpest increase in foreign takeover activity in the U.S. came from British companies which recorded 48 takeovers last year worth \$2.8bn compared to 42 in 1983 worth \$1.1bn. Among these UK's \$750m acquisition of Beatrice's chemical division ranked as the largest followed by Hanson Trust's \$531m acquisition of U.S. Industries.

Measured in numerical terms, Canadian companies with 36 acquisitions came second in the Grimm league table followed by France and Switzerland with seven each.

Grimm's explanation for the surge in foreign takeover activity in the U.S. against the background of a strong dollar is simple. The research firm argues that foreign corporate investors are willing to pay a premium for the improved access to the U.S. markets that a U.S. manufacturing base affords and that this drive has been strengthened by the relative buoyancy of the U.S. domestic economy.

ICI's acquisition of the Beatrice units fits this mould. In one swoop the deal boosted ICI's annual sales in the U.S. by about a third to \$22bn while driving into the UK group's strategy to reduce its dependence on low-margin bulk chemical production and the British marketplace.

ICI's deal also highlighted several other aspects of the foreign takeover boom. It provided access to U.S. advanced technology and materials—par-

ticularly composites through Beatrice's fibre composite materials unit—and it took advantage of an American company's own restructuring plans.

In other important respects the ICI deal, like BASF's acquisition of the Inmont specialised industrial manufacturing group, also bucked the trend. While foreign companies have shown continued interest in U.S. basic manufacturing industry, much of the merger activity has been concentrated in the booming food, consumer products, retail and distribution sectors.

Distillers' acquisition of Somerset, Importers, Grand Metropolitan's acquisition of Quality Care and Whitbread's acquisition of Buckingham Corp illustrate this dimension. Similarly Mr Rupert Murdoch's acquisition of a 50 per cent stake in 20th Century Fox, which has since used as a springboard for a daring planned expansion into the U.S. television industry, demonstrates the magnetism that the U.S. service sector exerts over foreign investors.

The U.S. financial services industry has also continued to attract investment. Nevertheless, as Grimm suggests, overseas corporate investors have become somewhat more discerning about their U.S. acquisitions after a string of mistakes in the late 1970s and early 1980s, some of which—like Midland Bank's ill-fated acquisition of Crocker National, the West Coast banking group, the foreign parents are still learning to live with.

They also appear to have become more price conscious. According to the Grimm figures foreign corporate investors paid on average about 17.8 times after-tax earnings for their U.S. targets, only slightly more than the average of 17.2 times earnings.

In contrast in 1979, when foreign takeovers hit the peak of 236, overseas companies were paying an average of 20.9 times earnings while their U.S. counterparts were paying just 14.3 times for their own acquisitions.

The implication is that foreign corporate investors, while seizing the opportunity to expand their U.S. operations, have become both older and wiser.

Overseas companies eager to invest

Greenfield Projects

TERRY DODD SWORTH

THE SIGHT is a familiar one throughout the U.S. on the perimeter of a medium-sized town, set amidst woods or rolling farmlands, is a handsome new industrial estate. The buildings are generally moderately sized, capable of taking around 500 workers, spacious inside and surrounded by greenery. Nothing could be further from the squalid mills of yesteryear.

These are typically the surroundings where many of the more recent foreign investments in the U.S. are to be found. GKN, the UK components company, for example, has a factory on an estate in North Carolina, while the Japanese auto manufacturer has a similar plant outside Atlanta, Georgia, in the heart of the Deep South and Samsung, the South Korean consumer electronics group, has just opened a model facility of its kind in the undulating hills of the Appalachians in western New Jersey.

Greenfield investment by overseas companies has continued strongly in the U.S. through the beginning of the 1980s, despite the costs in a period of great dollar strength. Indeed, far from the currency being a deterrent, some economists have suggested that its strength is partly explained by the eagerness of foreigners to invest in the U.S. economy. This enthusiasm comes from a number of factors—the booming market, fear of import restrictions and the desire to place investments in a "secure" political environment, among others.

The new companies tend to gravitate towards the non-industrialised South partly because of financial incentives made available by the states, but also to avoid the high wage rates, traditional trade unionism and bitter worker-management relations in the older industrial areas.

The most significant phenomenon of the 1980s has undoubtedly been the decision of the leading Japanese car companies to invest directly in the U.S. after 20 years of steadily rising exports from their home base.

All of these projects, which include plants set up by Honda, Nissan, Toyota, and planned ventures by Mazda and Mitsubishi, have called for investments of over \$250m—often

Toyota MR2. The most significant phenomenon of the 1980s has been the decision by Japanese car companies to invest directly in the U.S.

well over. In terms of size and value there have been few foreign greenfield developments in the past to equal them.

They are, however, only the more notable examples of the investment tide flowing into the U.S. from across the Pacific. In a less dramatic fashion, they are mirrored by a myriad of smaller companies, some clustering around the car assemblers, but many others in different industries.

Most notably, these include the Japanese consumer electronics groups which now dominate the U.S. market. Most of these have deliberately established brand new factories in areas where they feel they can more easily put their own imprint on manufacturing methods and working relationships with employees. They see this as a necessary part of an investment the success of which is partly reliant on developing the same quality standards as they achieve in Japan.

More recently, the Japanese have been followed by other South East Asian electronic companies with similar electronics assembly operations.

Sampo, the television company from Taiwan, for example, has established a plant in Georgia, and two South Korean concerns, Goldstar and Samsung, have set up greenfield projects within the last two years. They are all following the Japanese strategy of trying to gear up from a base in low-price products to more sophisticated

FORECLOSURE SALE

WATERFRONT FLORIDA PROPERTIES

Our company represents several major banks who have a wide variety of waterfront properties on both East and West coasts of Florida. These properties are priced to be sold quickly and are far below market value.

These fine properties were acquired through client bank foreclosures.

The types of property available are:

- Resort Hotels
- Atlantic and Gulf Coast Condominium projects ranging in size from 12—60 apartment units
- Large parcels of prime undeveloped water-front land
- Luxury timeshare resort developments

Our client banks have attractive financing available

For further information, please contact:

Michael J. Butler,

THE BANKERS COLLECTIVE HEADQUARTERS GROUP

P.O. Box 40037, 6633 Midnight Pass Road, Sarasota, Florida 34231, USA. Telephone: (813) 349-0300.
